General Information

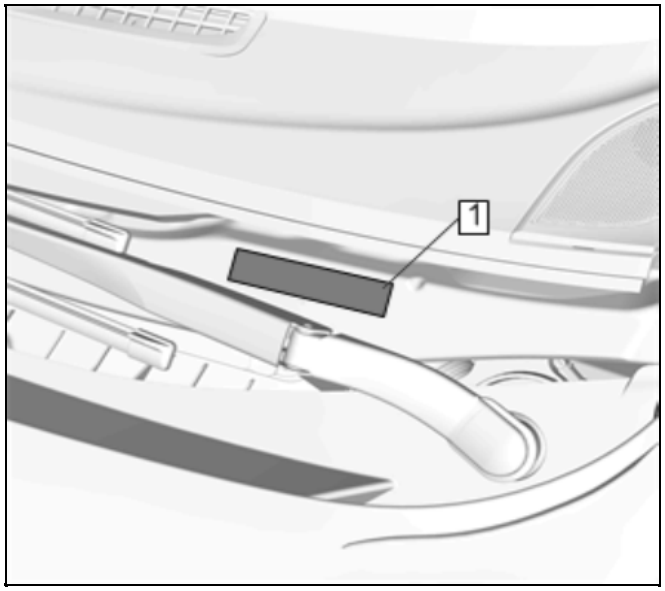
Introduction

Vehicle, Engine and Transmission ID and VIN Location, Derivative and Usage



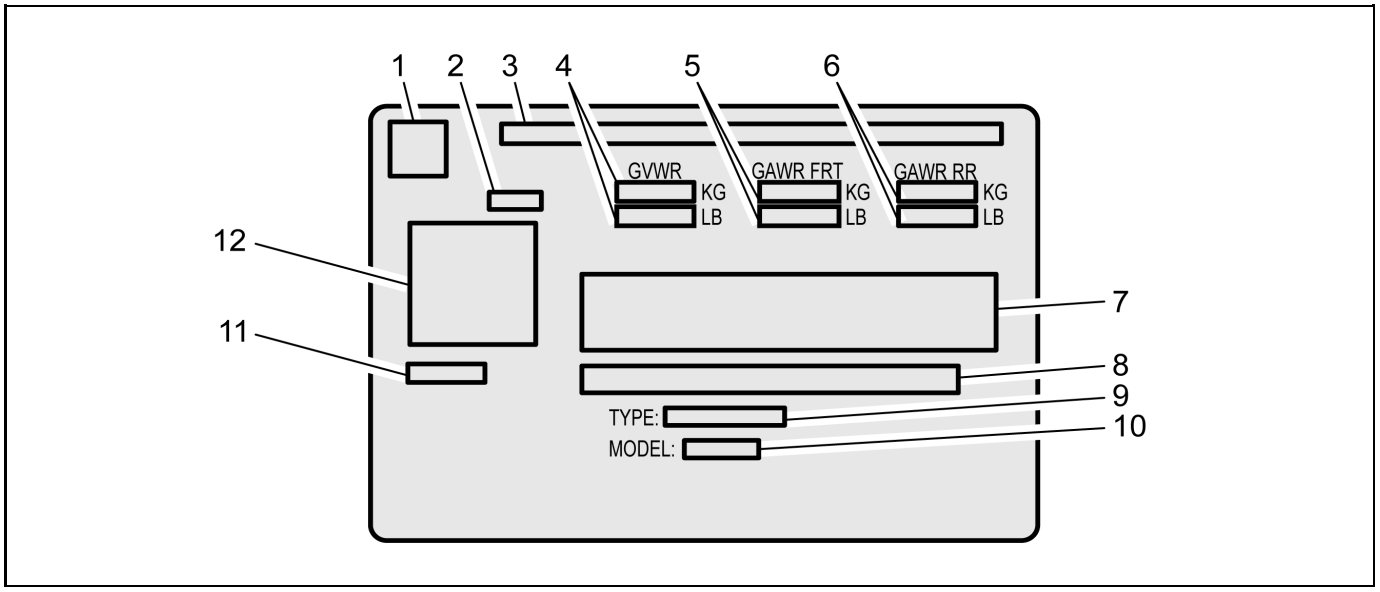
4544201

Vehicle, Engine and Transmission ID and VIN Location, Derivative and Usage

Position	Definition	Character	Description
Vehicle Identification Number (VIN) System The VIN plate (1) is the legal identifier of the vehicle. The VIN plate is located on the upper left corner of the instrument panel and can be seen through the windshield from the outside of the vehicle.			
1–3	Region of Build	1	United States
	Manufacturer	G	General Motors
	Vehicle Brand/Type	1	Chevrolet Passenger Car
4–5	Vehicle Line/Series	F/W	Chevrolet Bolt EV, LT
		F/X	Chevrolet Bolt EV, Premier
		F/Y	Chevrolet Bolt EV, LT w/DC Fast Charging
		F/Z	Chevrolet Bolt EV, Premier w/DC Fast Charging
		F/7	Chevrolet Bolt EV, (Non-US, Non-Canada)
6	Body Style	6	48 - Sedan, 4 - Door, 4 Window, Hatchback
7	Restraint System	E	AY0 - Active Manual Belts, Airbags-Driver & Passenger-Front (1st row), Front Seat Side (1st row), Roof Side (all seating rows)
		S	AYF - Active Manual Belts, Airbags - Driver & Passenger Front (1st row), Front Seat Side (1st row) & Rear Seat Side (2nd row), Roof Side (all seating rows), Driver & Passenger knee (1st row)
8	Engine Type	0	EN0 - ENGINE NONE
9	Check Digit	0~9	X - Calculated by POMS
10	Model Year	P	2023
11	Plant Location	4	Orion
12–17	Sequence Number	Positions 12 through 17 represent the number sequentially assigned by the manufacturer in the production process.	

1ET25 (MMF) Automatic Transmission ID and VIN Derivative Location
Transmission Identification Information

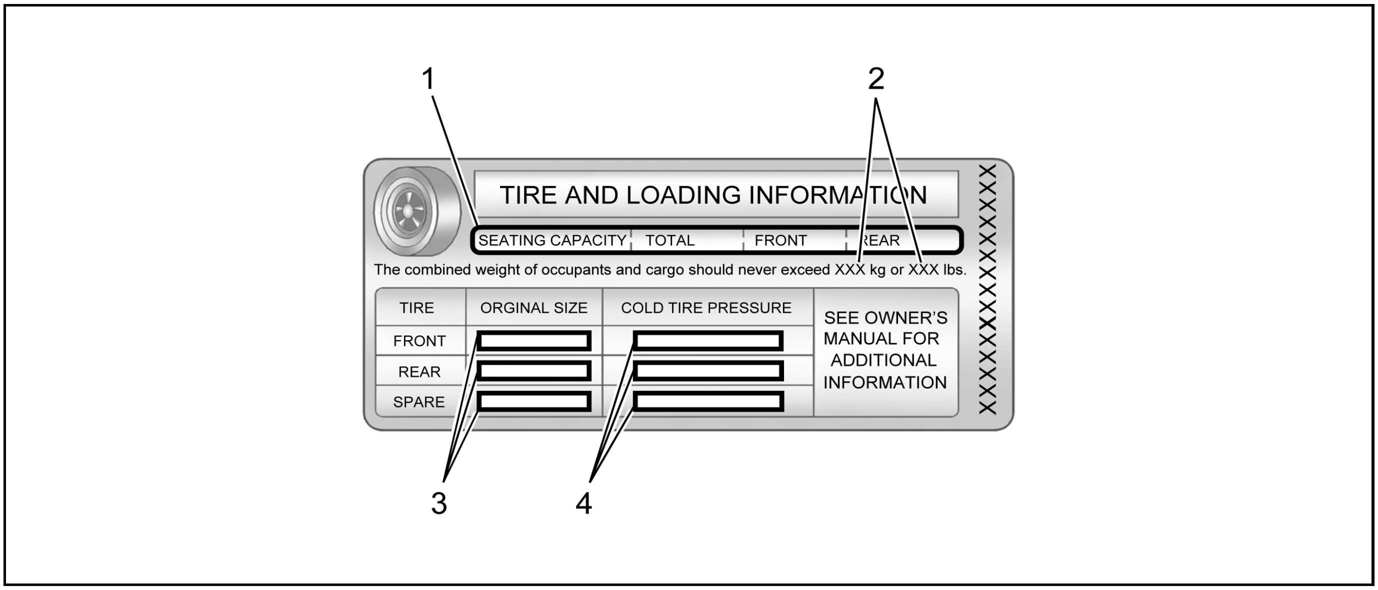
Vehicle Certification, Tire Placard, and Anti-Theft Label



4967191

Vehicle Certification Label

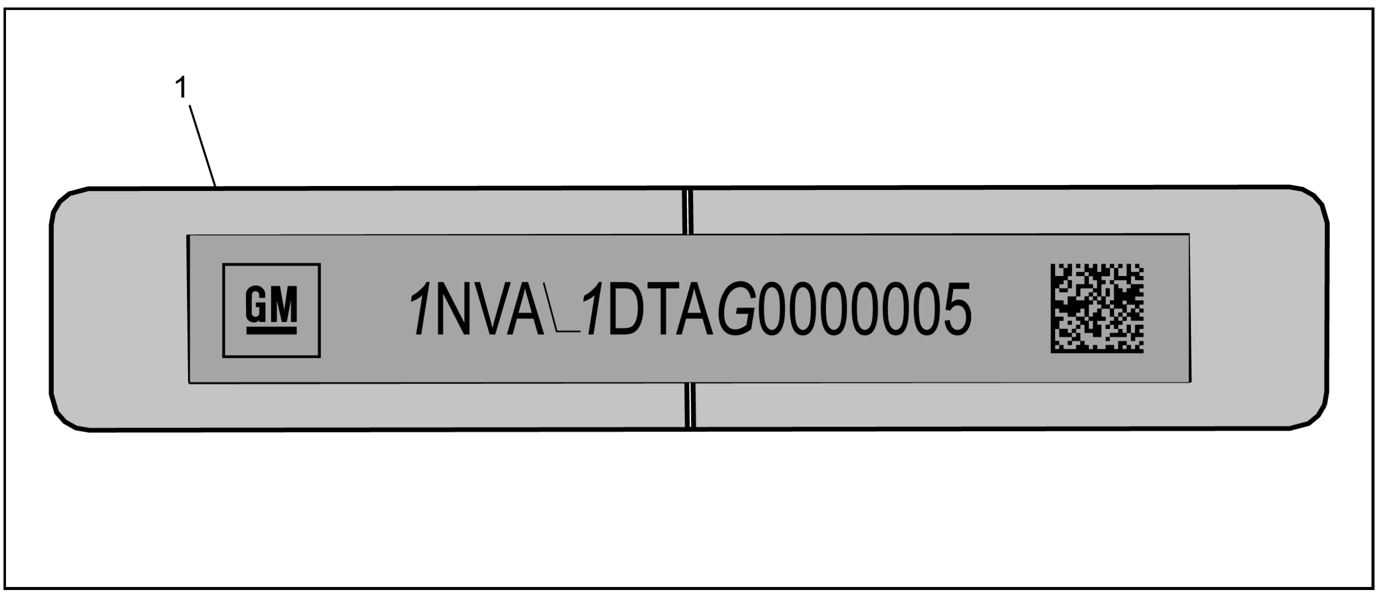
Callout	Description
A vehicle-specific Certification label is attached to the vehicle's center pillar (B-pillar) and displays the following assessments:	
1	Logo
2	Final Date of Manufacture (Month and Year MM/YY) Date of manufacture is to reflect the date that the vehicle is counted as built. In those cases where a replacement label is needed, the replacement label should reflect the actual build date not the date of replacement.
3	Name of Manufacturer
4	Maximum Gross Vehicle Weight Rating (GVWR)
5	Maximum Gross Axle Weight Rating (GAWR) - Front
6	Maximum Gross Axle Weight Rating (GAWR) - Rear
7	Certification Statement
8	Vehicle Identification Number (VIN)
9	Vehicle Class Type (Pass Car, etc.)
10	Engineering Model Number
11	Paint Code
12	QR Code Once the QR code is scanned, the information will appear in this order on your smartphone or laptop: VIN, Model Year, Model, Build Month, Year, Engineering Book, Vehicle Order Number, 3 Digit RPO Codes sorted alphanumerically and the Paint Code (same code appears the lower left of the QR code)



4962282

Tire Placard

Callout	Description
A vehicle-specific Tire and Loading Information label is attached to the vehicle's center pillar (B-pillar) and displays the following assessments:	
1	Specified Occupant Seating Positions
2	Maximum Vehicle Capacity Weight
3	Original Equipment Tire Size
4	Tire Pressure, Front, Rear, and Spare (Cold)



4962289

Anti-Theft Label

Callout	Description
This legal identifier is in the front corner of the instrument panel, on the driver side of the vehicle. It can be seen through the windshield from outside. The Vehicle Identification Number (VIN) also appears on the Vehicle Certification and certificates of title and registration.	
1	Vehicle Identification Number (VIN)

RPO Code List

The following table provides the description of the Regular Production Option (RPO) codes that are available on the vehicle. The vehicle's RPO list is printed on the Service Parts Identification Label.

RPO	Description
00G	IDENTIFICATION-NOT EQUIPPED WITH HEATED STEERING WHEEL
00V	IDENTIFICATION-NOT EQUIPPED WITH FRONT HEAT/VENT SEATS
00Y	IDENTIFICATION-NOT EQUIPPED WITH REAR PARK ASSIST
4AA	INTERIOR TRIM-JET BLACK
5A7	WHEEL SPARE-NONE
5AT	ACCESSORY-LEVEL 2 PORTABLE EVSE - SWAPPABLE GRID PLUGS 7.7KW

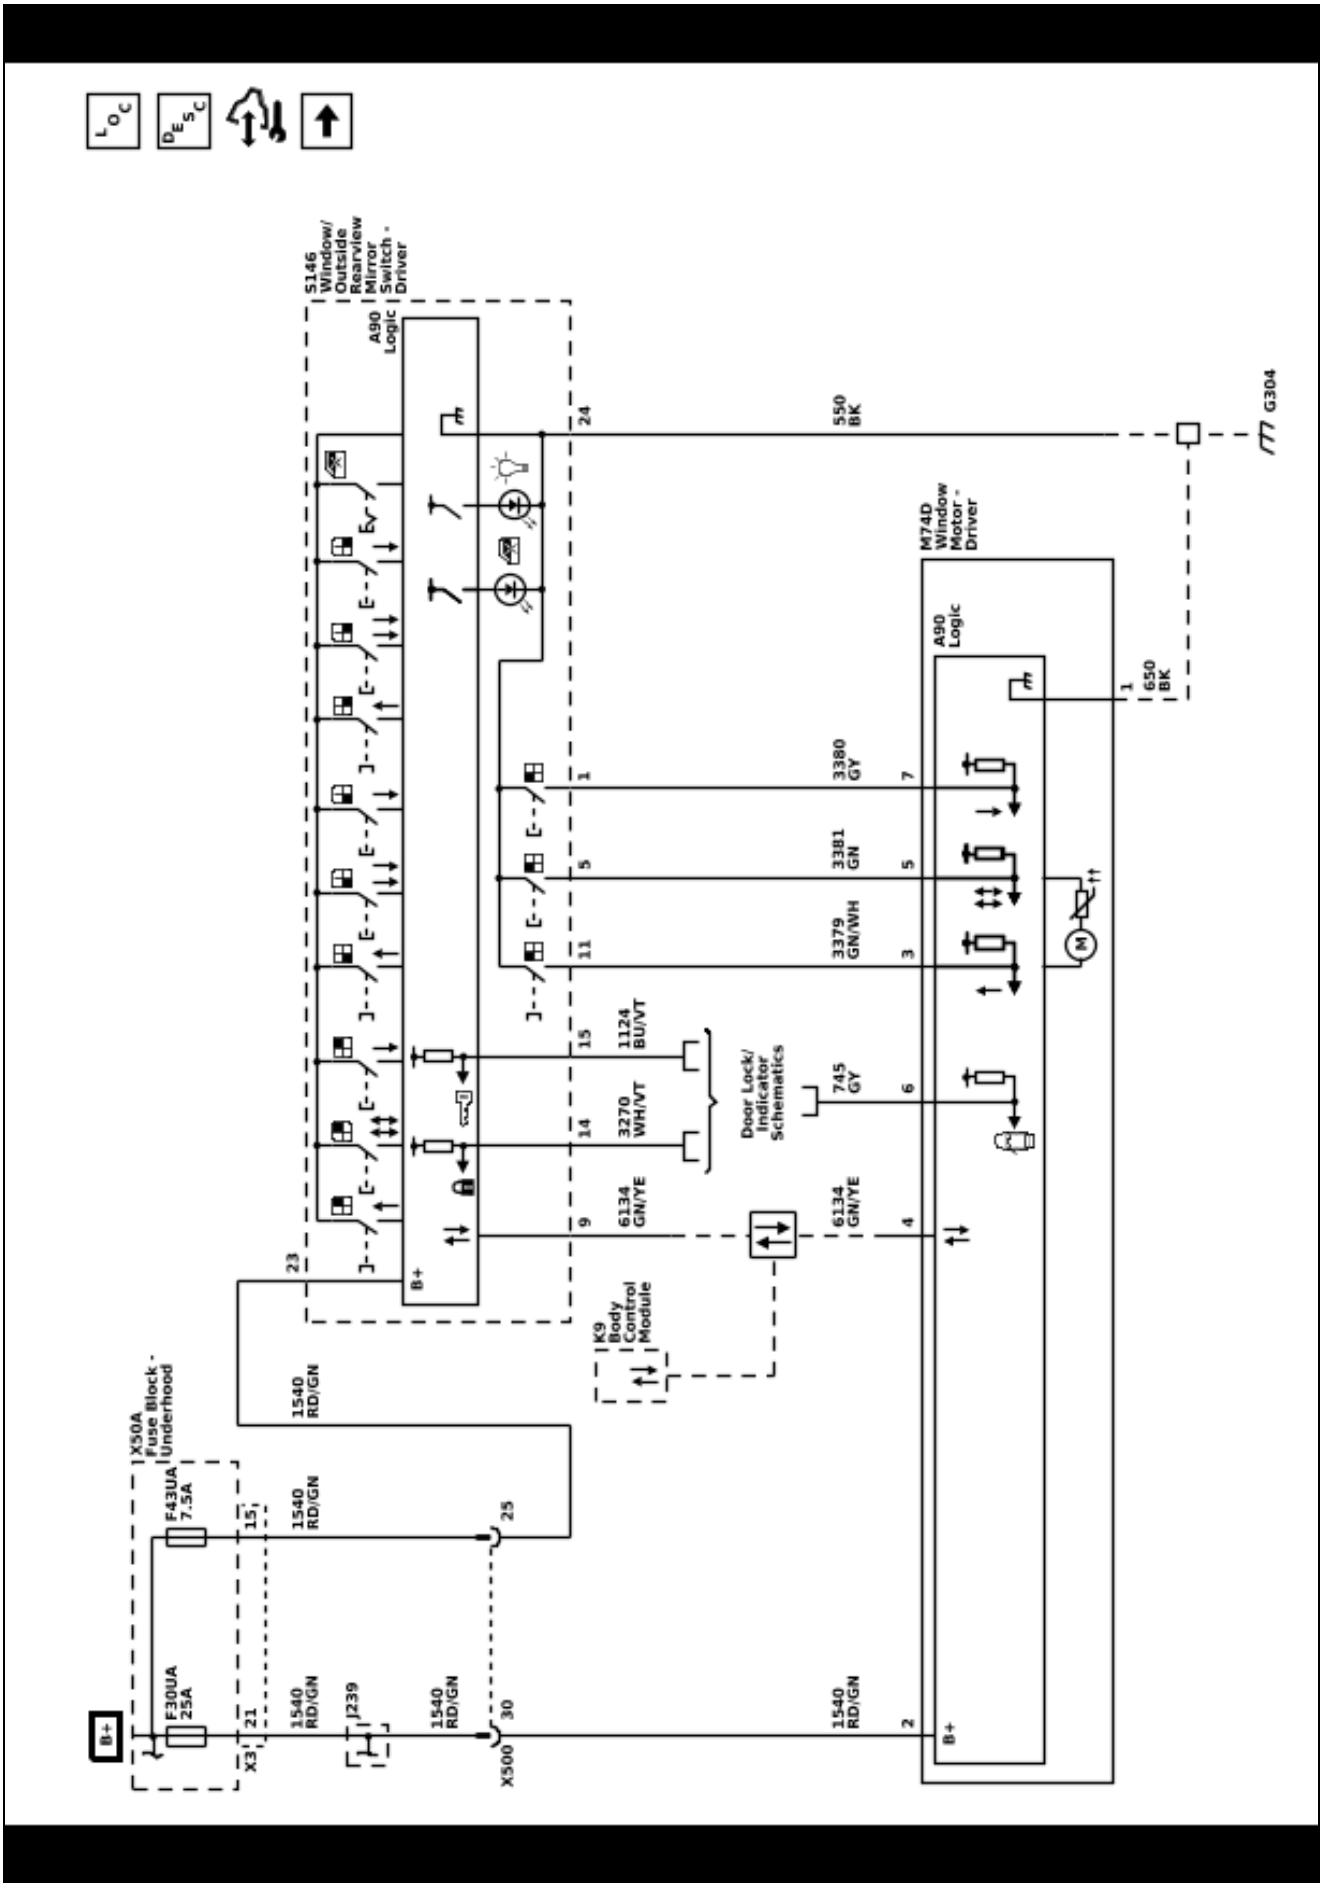
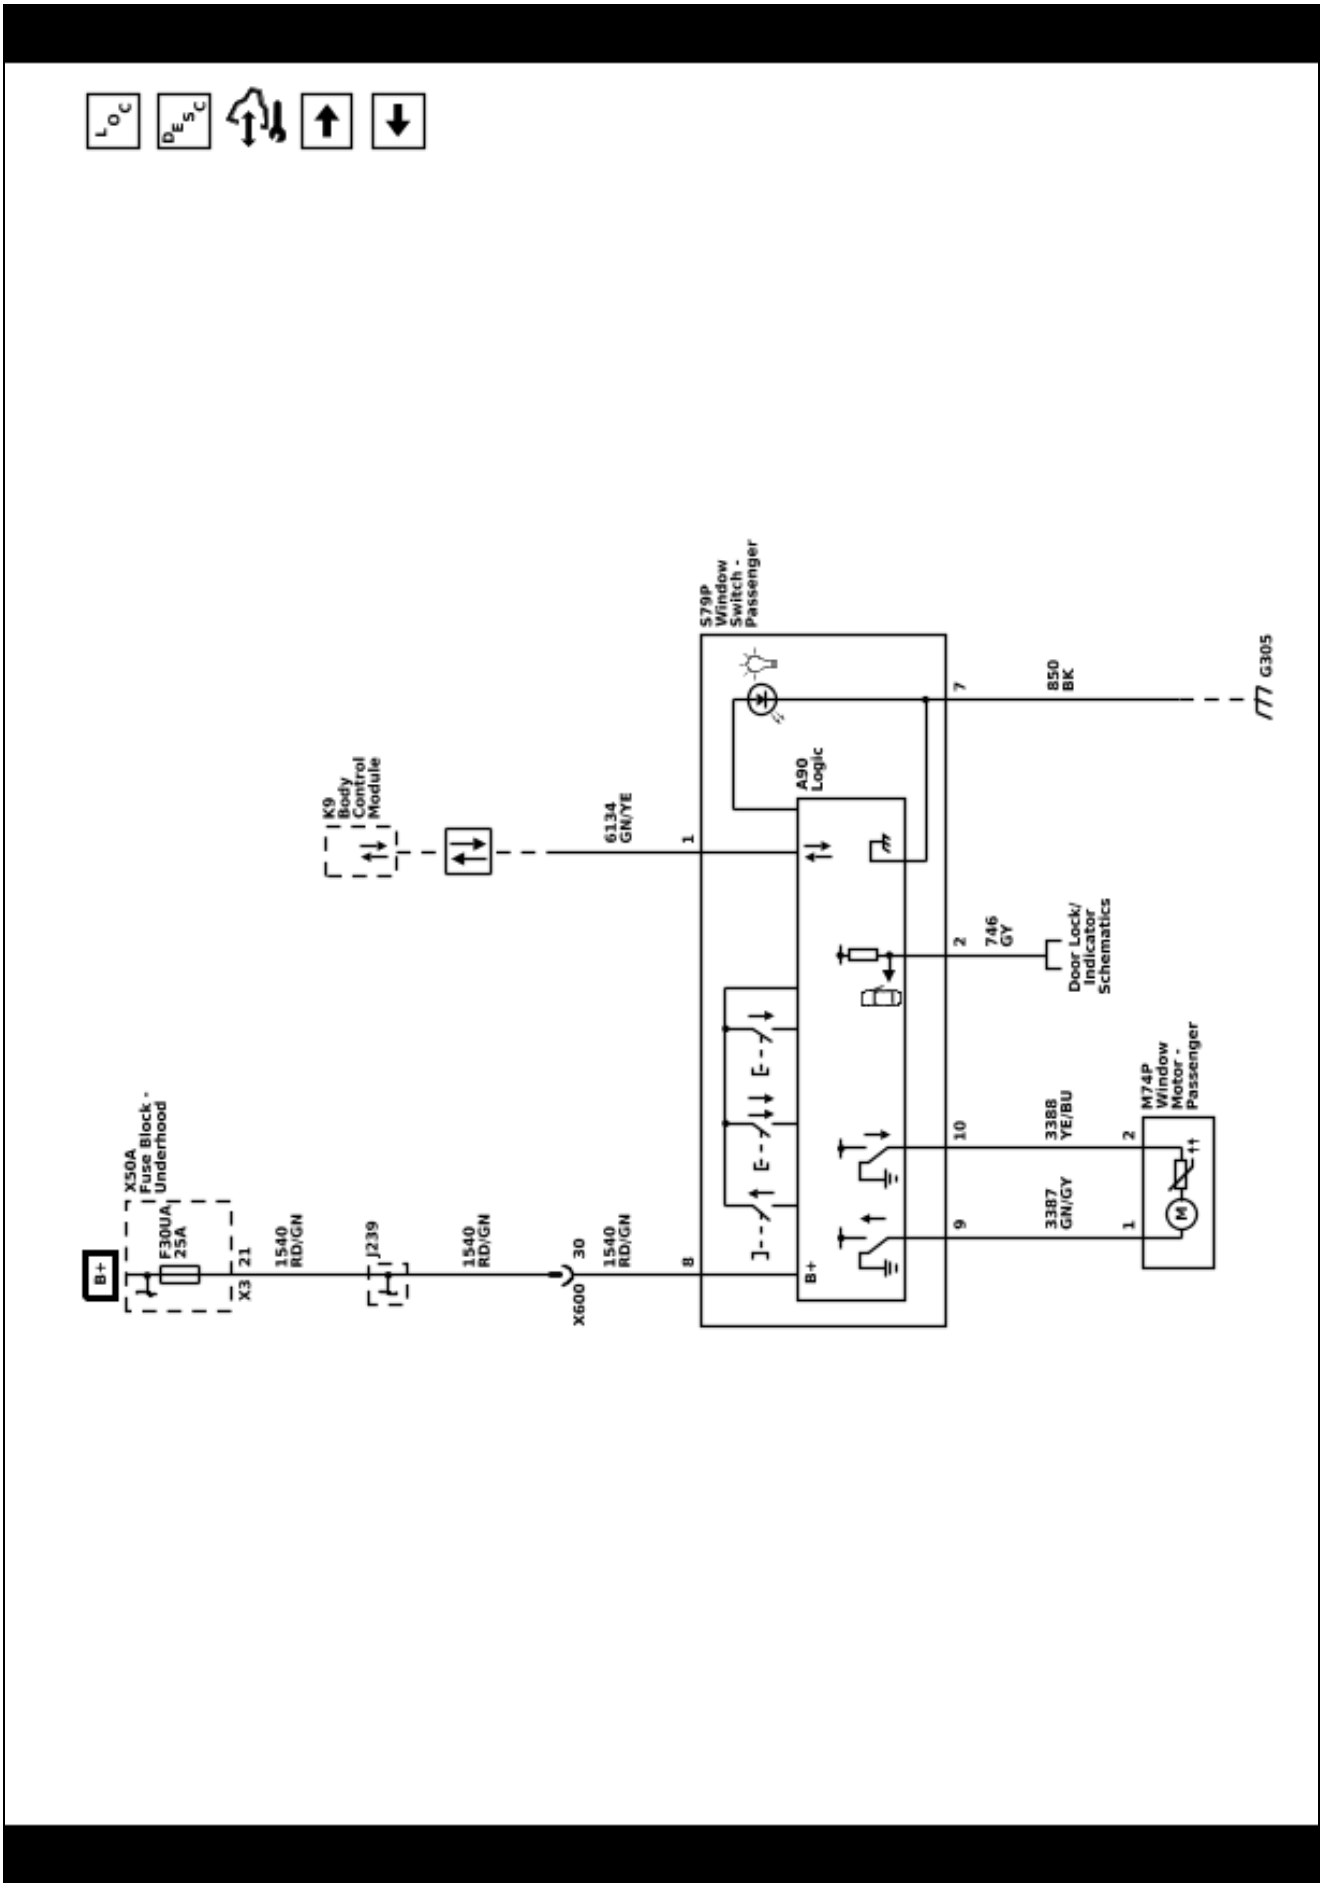
Fixed and Moveable Windows

Schematic and Routing Diagrams

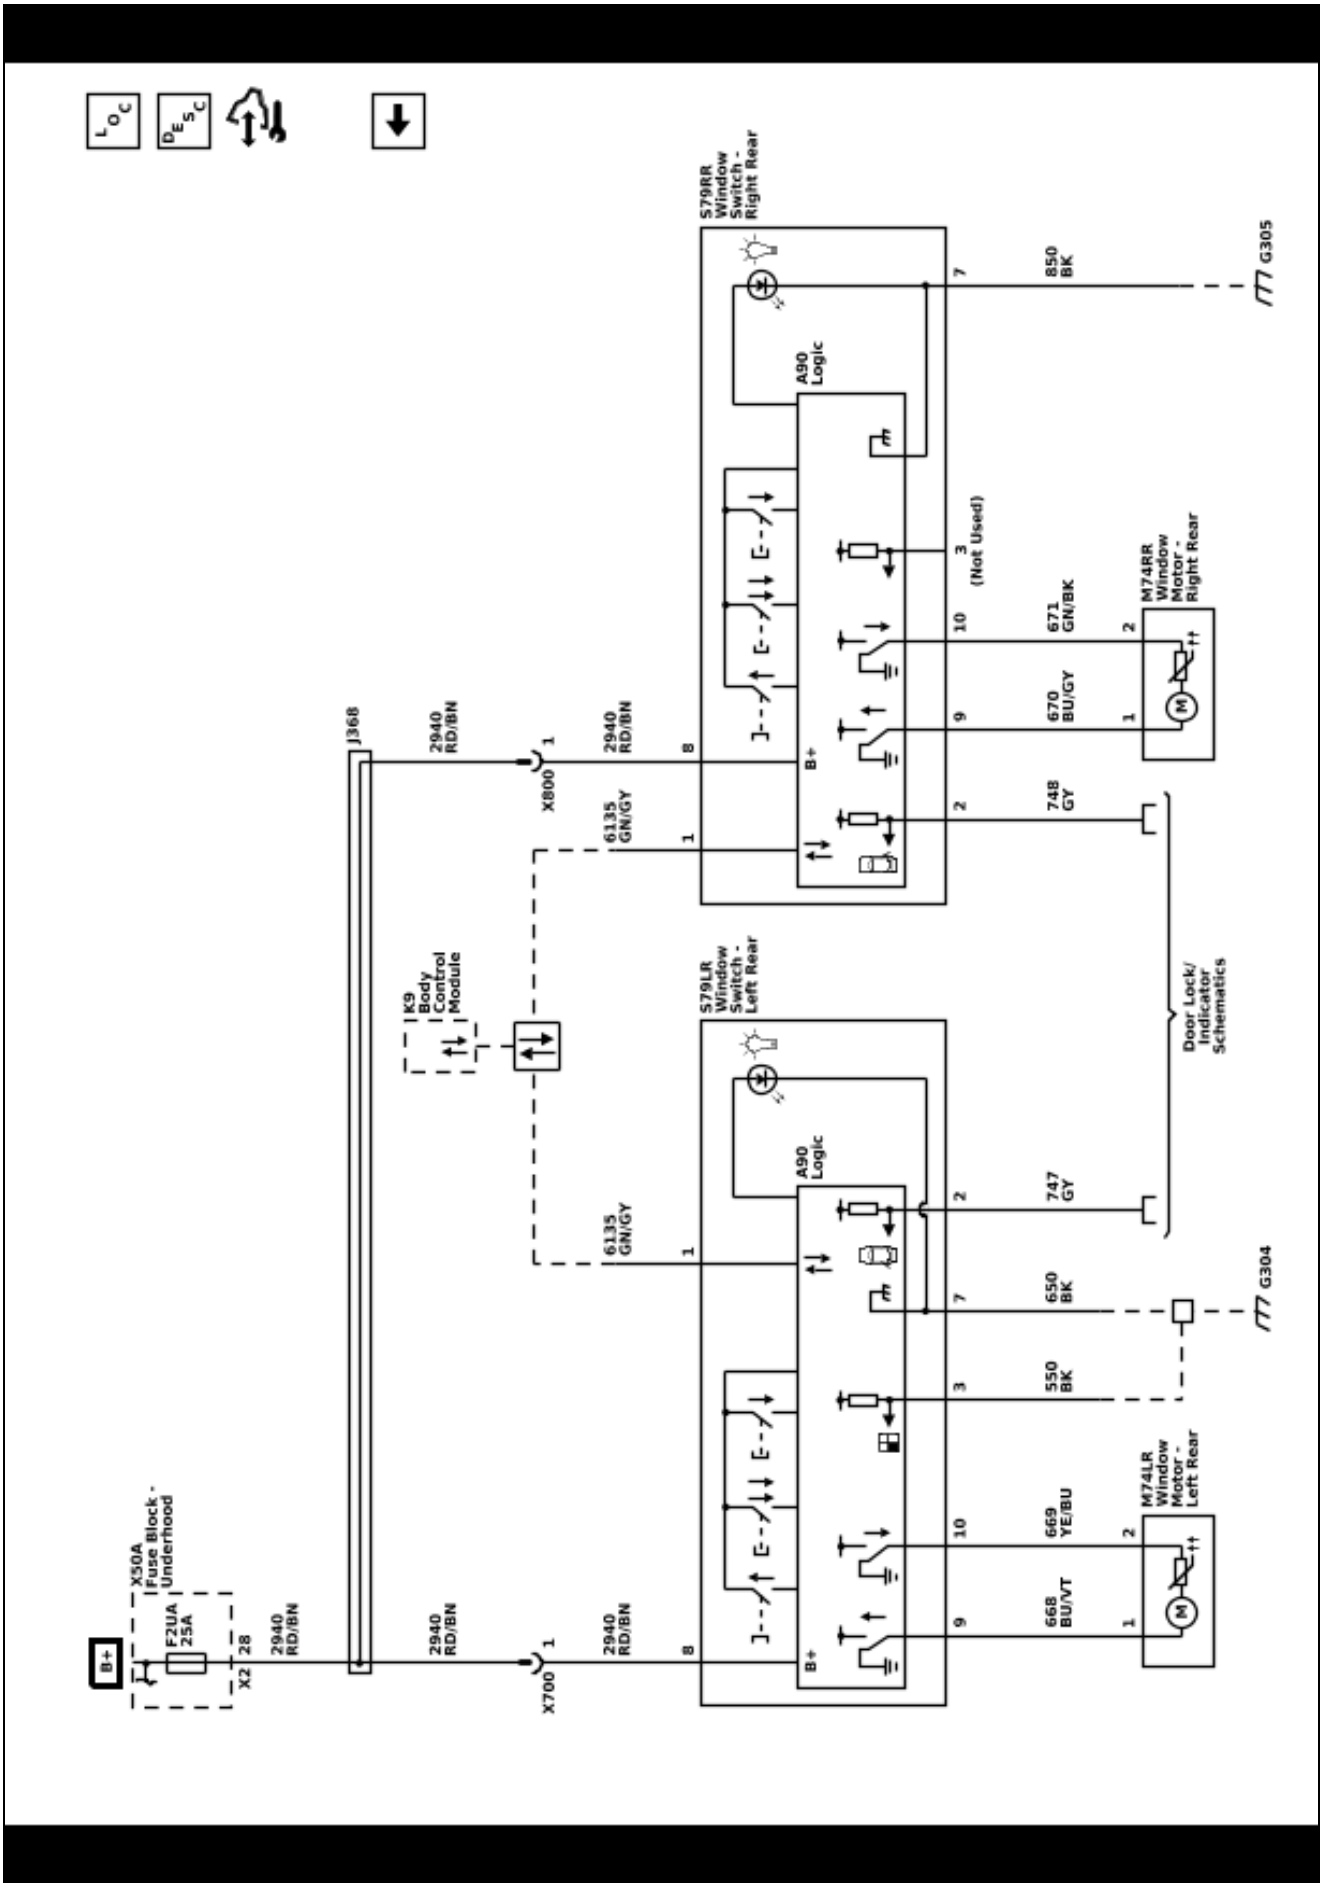
Moveable Window Schematics (Driver Door)



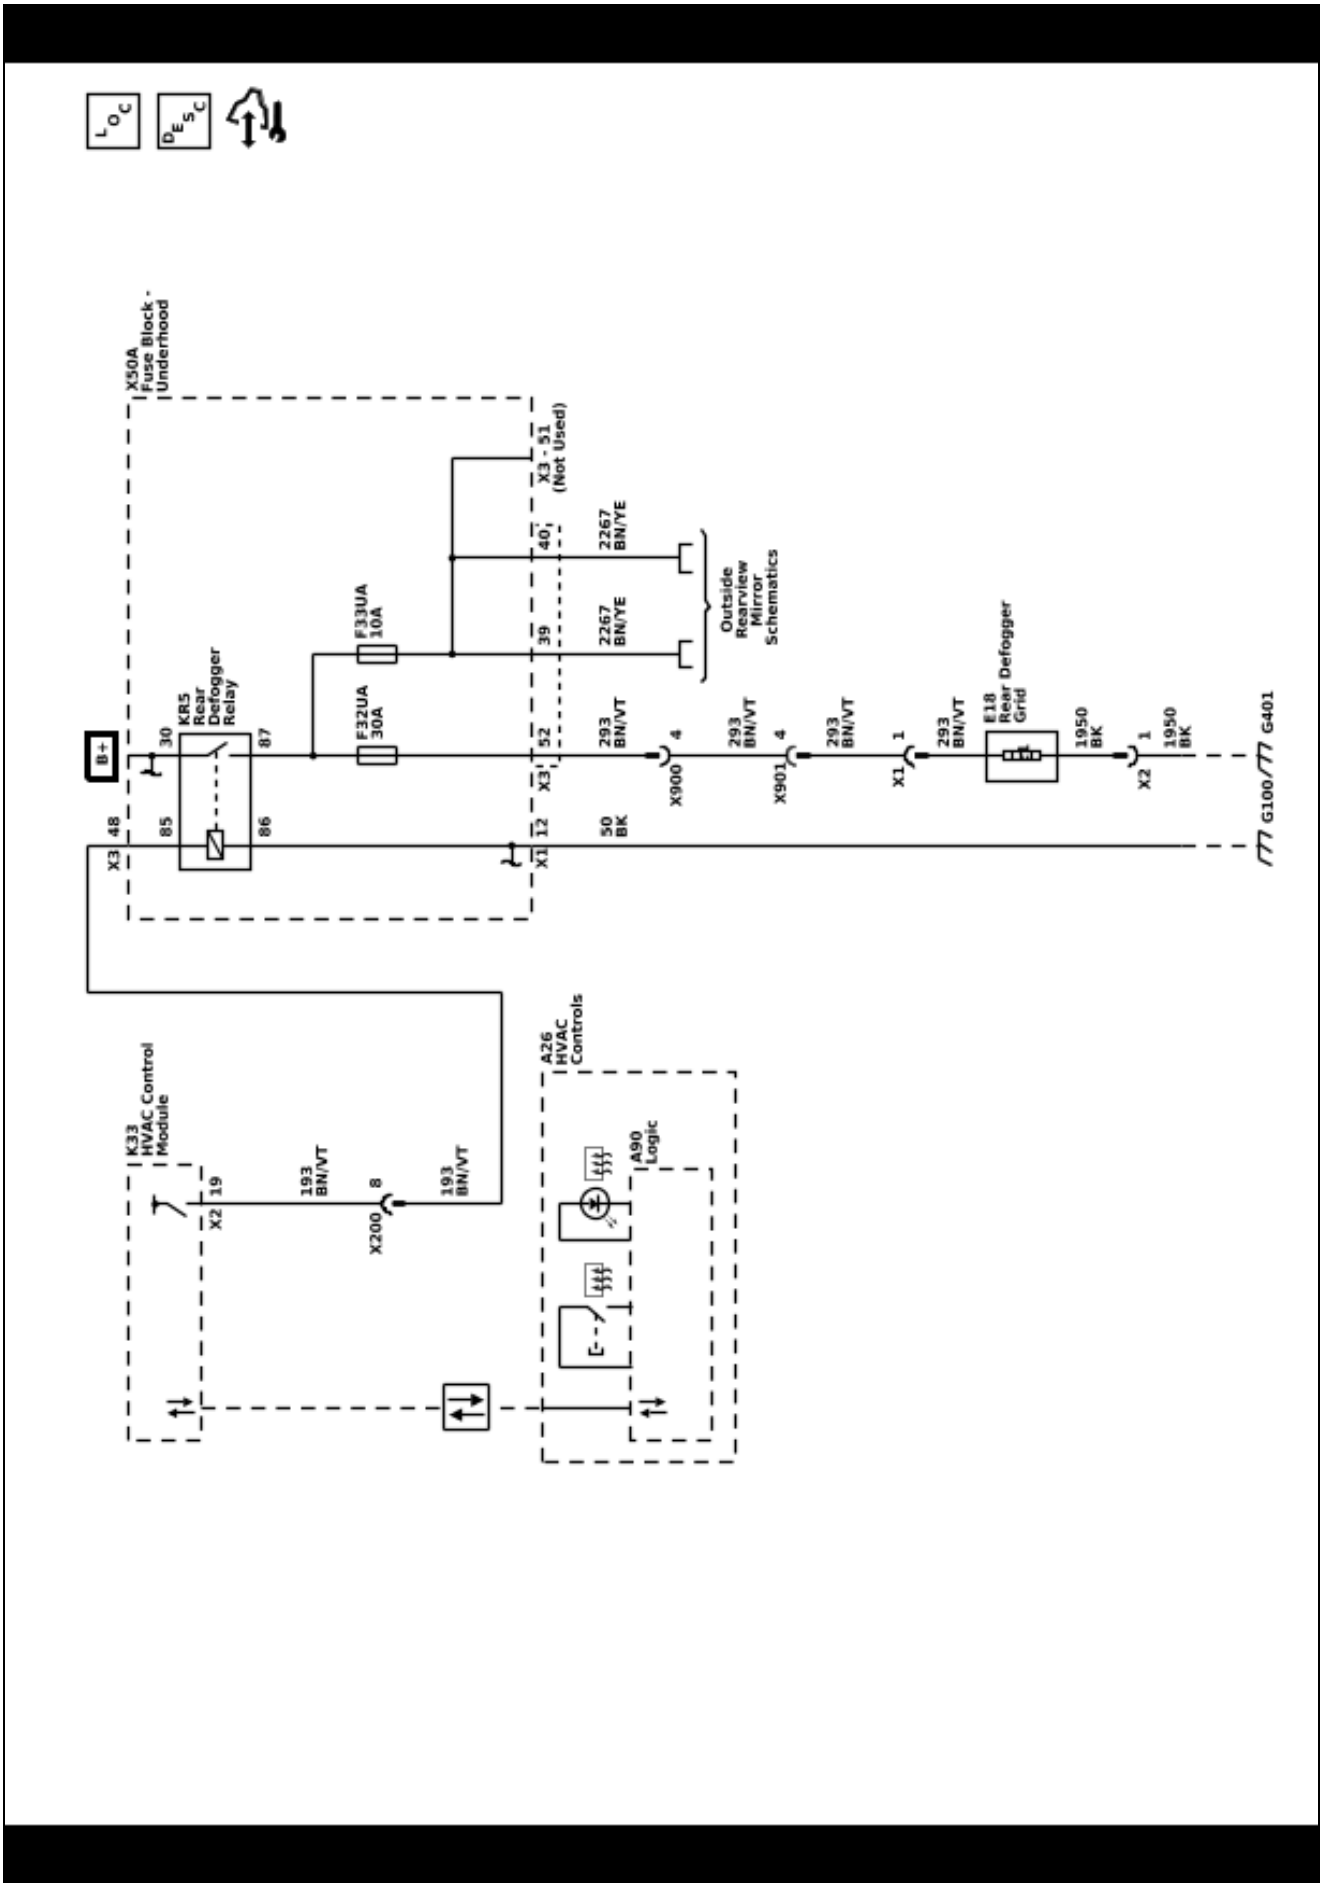
Moveable Window Schematics (Passenger Door)



Moveable Window Schematics (Rear Doors)



Defogger Schematics (Rear Window Defogger)



Description and Operation

Power Windows Description and Operation

Power Windows System Components

The power window system consists of the following components:

- Driver window/outside rearview mirror switch
- Passenger window switch
- Left rear window switch
- Right rear window switch
- Right rear door latch
- Left rear door latch
- Window motors in each of the doors
- 25A Fuse
- Body control module (BCM)

Driver Express Up and Express Down Power Window Motor

The driver door contains a window motor is smart motor that will detect excessive resistance while performing the express up function and automatically reverse direction to prevent injury to any occupants that may become trapped between the closing window and the door frame. The automatic reverse safety feature can be overridden by pulling and holding the window switch.

The logic circuit within the window motor monitors the up, down and express signal circuits which are normally equal to B+ voltage. When a switch is used on the driver window/outside rearview mirror switch, the contacts close causing a voltage drop within the appropriate signal circuit. The driver window motor will detect the voltage drop and will command the window to move in the direction requested.

Passenger and Rear Doors with Express Down Window Motors

For the passenger, right rear and left rear doors, when their window switch is pressed in the down position, battery positive voltage is applied to their respective window motor control circuit and ground to the other window motor control circuit causing that window to open. When the individual window switch is pulled in the up position, voltage and ground is applied to the window motor in the opposite direction causing that window to close. The return path to ground is supplied through the inactive control circuit being normally grounded through the window switch.

Each window switch communicates to the BCM by a serial data circuit. When the driver wishes to control the passenger, left rear or right rear window, the driver will use the appropriate switch on the driver window/outside rearview mirror switch. When this switch is used, a serial data message is sent to the BCM requesting a window motor command, the BCM will then send a serial data message to the appropriate door window switch which will then command that window to move in the direction requested.

Lockout Switch Feature

The driver window/outside rearview mirror switch contains a window lockout switch, when the driver presses the window lockout switch, a serial data message is sent to the BCM which will send a disable command to the rear window switches, the rear window switches will then ignore all functions when a passenger uses the rear window switch. The rear window motor commands will still function normally when the driver uses the appropriate switches on the driver window/outside rearview mirror switch.

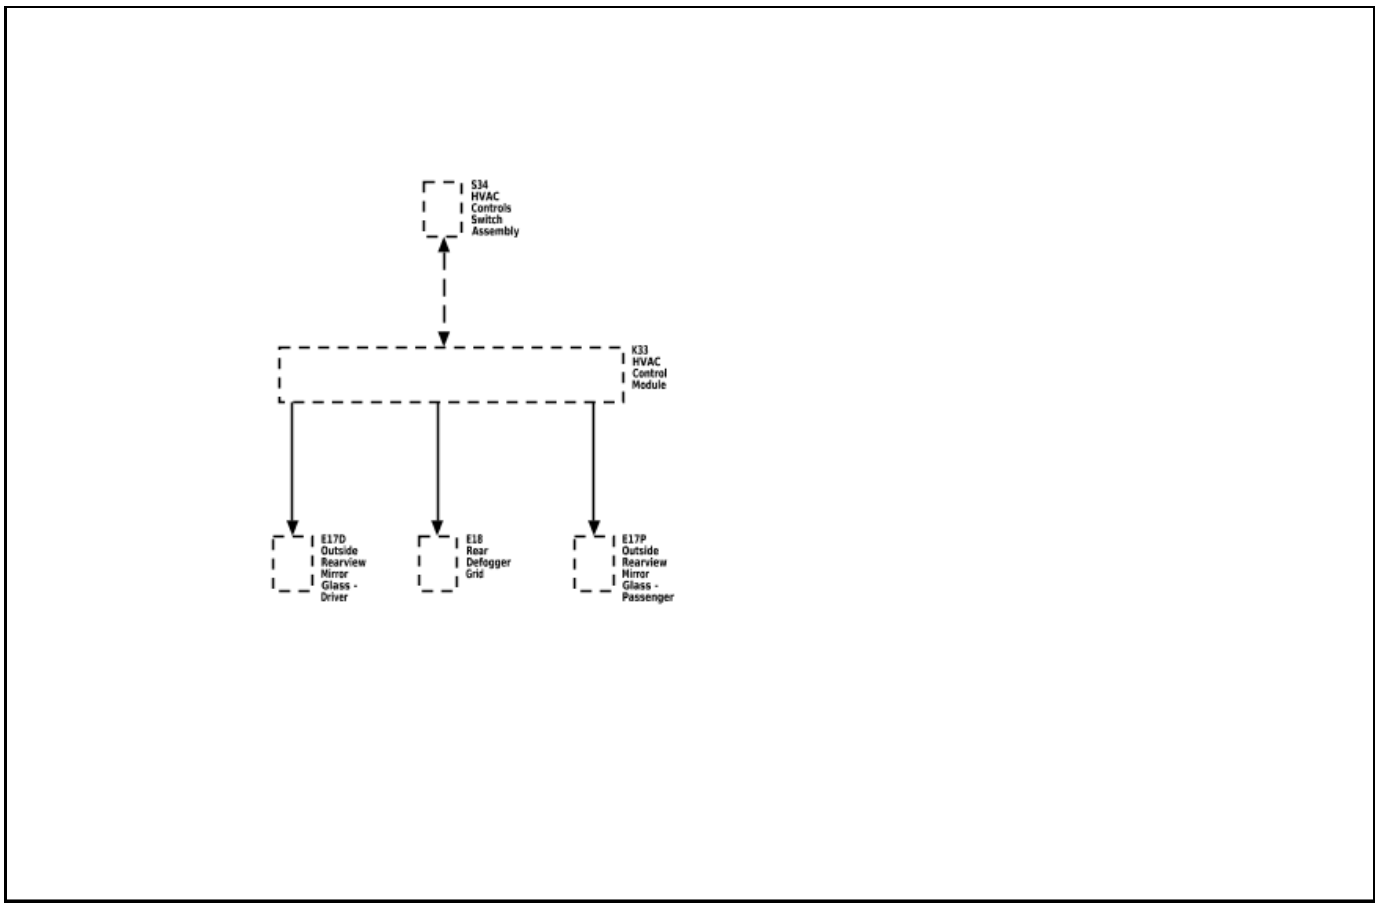
Rear Window Defogger Description and Operation

Rear Window Defogger System Components

The rear window defogger system consists of the following components:

- HVAC Control Module
- HVAC Controls Switch Assembly
- Rear Defogger Relay
- Rear Defogger Grid
- Driver Outside Rearview Mirror
- Passenger Outside Rearview Mirror
- 40A Fuse

S34-K33-X50A Defogger Block Diagram



3511670

Rear Window Defogger Operation

The rear defog control system utilizes a single zone backlight design, driven with a single relay configuration. Additionally, up to two outside rear view mirrors can be heated if required. A switch for the customer to control the system is provided within the HVAC controls switch assembly. Also included in the HVAC controls switch assembly is an indicator to inform the customer with the current state of the system. The system is only operational when the vehicle is ON/RUN.

Pressing the heated rear window switch causes the HVAC controls switch assembly to send a serial data message to the HVAC control module requesting rear window defog operation. The HVAC control module upon receipt of the serial data message will provide voltage to the coil side of the rear defogger relay, this will energize the relay causing the relay switch contacts to close allowing B+ voltage to flow through the rear defogger grid control circuit to the rear defogger grid.

When the rear heated rear window switch is pressed and the vehicle is ON/RUN, the rear window defogger grid will activate and will turn off automatically depending upon the vehicle speed (refer to owner's manual for rear window defogger operation cycles)

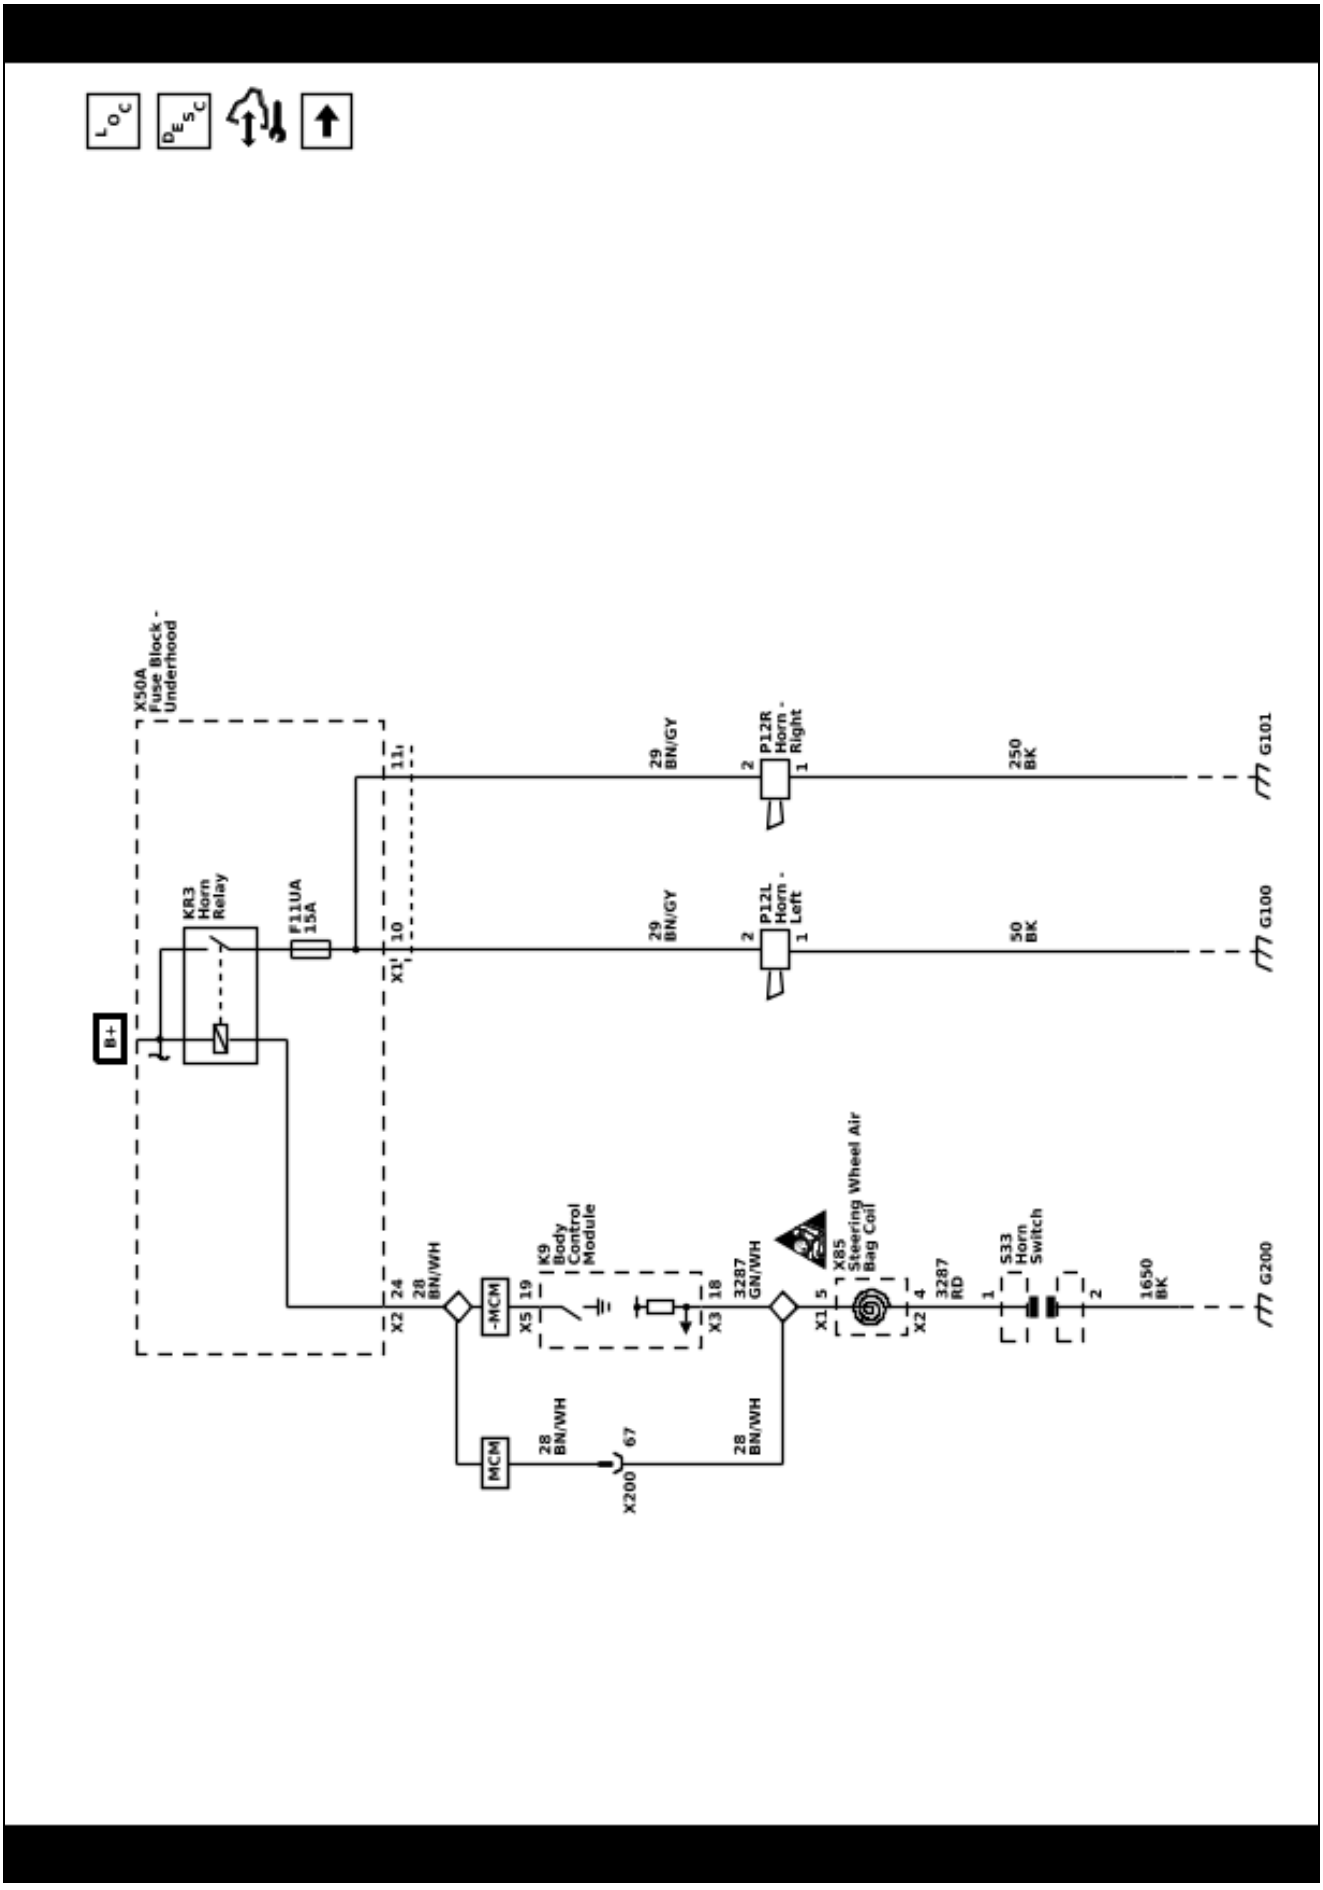
Heated Mirrors

The heated mirrors are also controlled through the rear defogger relay. Whenever the rear window defogger is turned on battery voltage is supplied to the mirror heater elements through the left and right mirror heater element control circuits.

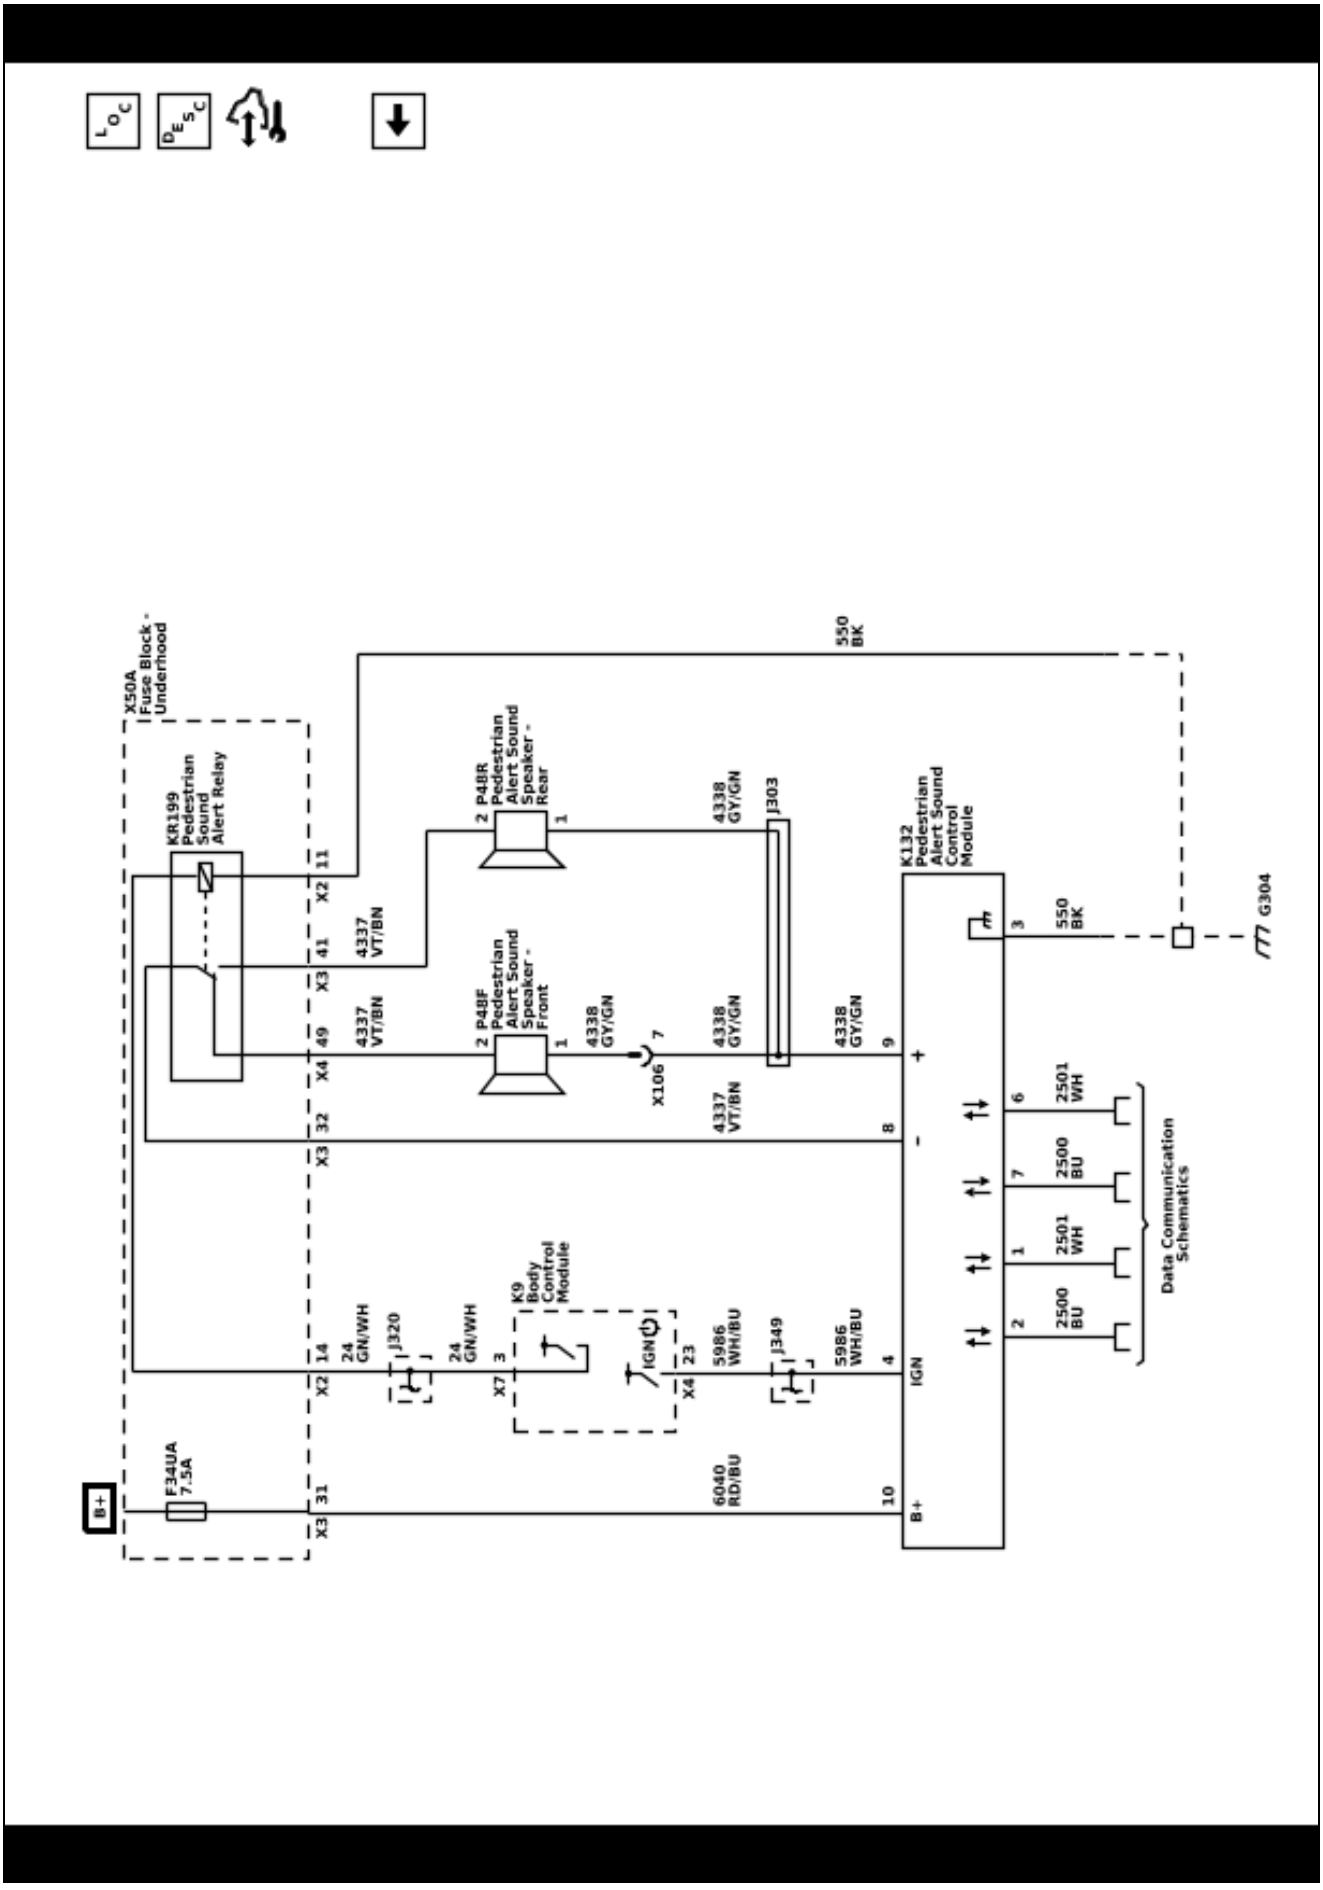
Horns and Pedestrian Alerts

Schematic and Routing Diagrams

Horn Schematics (Horn)



Horn Schematics (Pedestrian Alert)



Description and Operation

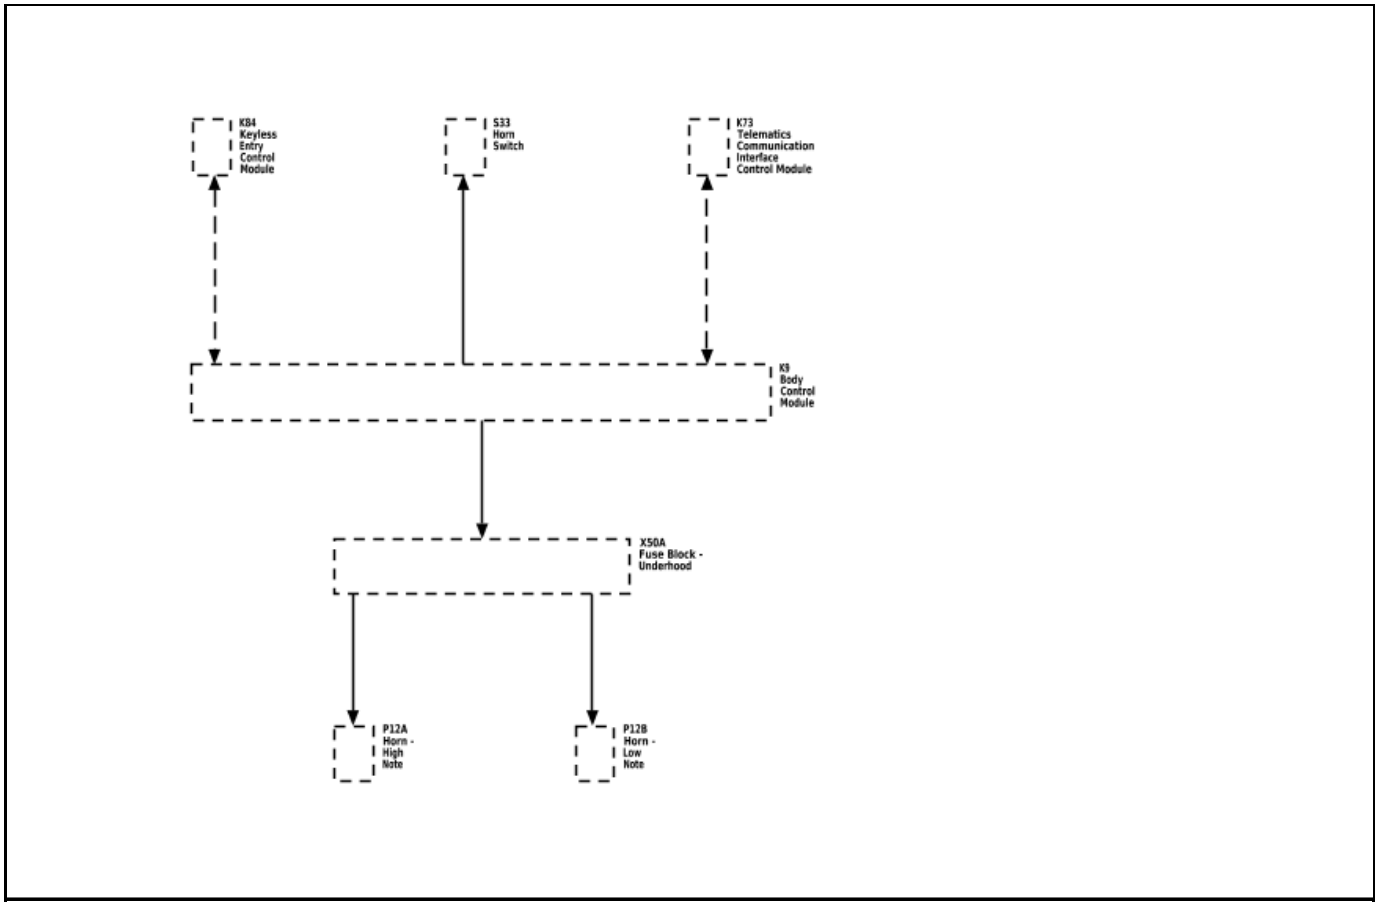
Horns System Description and Operation

System Description

The horn system consists of the following components:

- HORN fuse
- Underhood fuse block (contains PCB horn relay)
- Horn switch
- Horn-low note
- Horn-high note
- Body control module (BCM)

Horn Block Diagram



3461340

System Operation

The vehicle horn system is activated under the following conditions:

- When the horn switch is depressed
- The BCM commands the horns ON under any of the following conditions:
  - When the content theft deterrent system detects a vehicle intrusion—For further information refer to Theft Systems Description and Operation.
  - When the panic button is depressed on the remote control door lock transmitter—For further information refer to *Keyless Entry System Description and Operation on page 7-11*.
  - When the keyless entry system is used to lock the vehicle, a horn chirp may sound to notify the driver that the vehicle has been locked. The notification feature may be enabled or disabled through personalization. For further information refer to *Keyless Entry System Description and Operation on page 7-11*.
  - When the OnStar® system is used to sound the horns if equipped—For further information, refer to OnStar Description and Operation.

Circuit Operation

Battery positive voltage is applied at all times to the horn relay coil and the horn relay switch. Pressing either of the horn switches applies ground to the horn

relay control circuit. The BCM may also apply ground to the horn relay control circuit as described above. When the horn relay control circuit is grounded, the horn relay is energized and battery positive voltage is applied to the horns through the horn control circuit. The horns sound as long as ground is applied to the horn relay control circuit.

Pedestrian Alert Description and Operation

Electric vehicles present a situation for visually impaired pedestrians who cannot hear an approaching electric vehicle, the pedestrian alert module creates sounds from a dedicated speaker to alert a visually impaired pedestrian, in a non-startling manner.

Operation of the Pedestrian Alert

- {With Z49/EF7} Emit sound from 0 to 18 MPH (30 KM/H)
- {Without Z49/EF7} Emit sound from 0 to 12 MPH (20 KM/H)
- Fade in and out control for the sound ON and OFF
- Change the pitch of the sound dependent of vehicle speed

Description and Operation
Exterior Lighting Systems Description and Operation

Exterior Lamps

The exterior lighting system consist of the following lamps if equipped:

- Automatic high beam assist
- Backup lamps
- Daytime running lamps
- Hazard warning lamps
- Headlamps
- Manual headlamp leveling
- Park, tail, license, and side marker lamps
- Stop lamps
- Turn signal lamps

Low Beam Headlamps

The headlamps may be turned ON in 3 different ways:

- When the headlamp switch is placed in the ON position, for normal operation
- When the headlamp switch is placed in the AUTO position, for automatic lamp control
- When the headlamp switch is placed in the AUTO position, with the windshield wipers ON in daylight conditions, after a 6 s delay

The BCM will also command the low beam headlamps ON during daylight conditions when the following conditions are met:

- Headlamp switch in the AUTO position
- Windshield wipers ON
- Vehicle in any gear but PARK

The body control module (BCM) monitors the signal circuits from the headlamp switch. When the headlamp switch is in the AUTO position, the signal circuits are open. When placed in the AUTO position, the BCM monitors inputs from the ambient light sensor to determine if headlamps are required or if daytime running lamps will be activated based on outside lighting conditions. When the headlamp switch is placed in the OFF position, the headlamp switch headlamps OFF signal circuit is grounded, indicating to the BCM that the exterior lamps should be turned OFF. With the headlamp switch in the PARK position, the headlamp switch park lamps ON signal circuit is grounded, indicating that the park lamps have been requested. When the headlamp switch is placed in the HEADLAMP position, both the headlamp switch park lamps ON signal circuit and the headlamp switch headlamps ON signal circuit are grounded. The BCM responds to the inputs by illuminating the park lamps and headlamps. When the low beam headlamps are requested, the BCM responds by applying a pulse width modulated signal to each headlamp assembly, allowing battery voltage to flow through the left and right low beam headlamp circuits.

When the BCM commands the low beam headlamps ON, the operator will notice the interior backlighting for the instrument cluster and the various other switches dim to the level of brightness selected by the instrument panel dimmer switch.

High Beam Headlamps

When the low beam headlamps are ON and the turn signal/multifunction switch is placed in the high beam position, ground is applied to the BCM through the high beam signal circuit. The BCM responds to the high beam request by applying ground to the high beam relay control circuit which energizes the high beam relay. With the high beam relay energized, the switch contacts close allowing battery voltage to flow through the left and right high beam fuses to the high beam control circuits and onto the left and right high beam solenoid actuators within the headlamp assemblies. Once the high beam solenoid actuators are active, the solenoid shutters open in each headlamp assembly exposing the remaining portion of the headlamp that was covered by the shutters illuminating the high beams at full intensity.

Automatic High Beam Assist

The automatic high beam assist system operates the high beam headlamps ON and OFF automatically when the system is activated and certain conditions are met. The automatic high beam assist system consists of a front camera module that detects light and is able to identify approaching vehicles on an even, straight road at a distance of greater than 0.4 km (0.25 mi). The front camera module analyzes light color, intensity, and movement. The automatic high beam assist system will turn OFF the high beam headlamps when approaching vehicle headlamps or preceding vehicle taillights are detected by the front camera module. Automatic high beam assist can be deactivated when the headlamp dimmer switch is moved from the neutral position to the high beam or flash to pass positions. Automatic high beam assist can be reactivated by operating the high beam select switch from the neutral position to the high beam position twice within 2 s.

Automatic High Beam Assist System Activation

- Vehicle ON
- Turn signal/multifunction switch placed in the AUTO position
- Turn signal/multifunction switch high beam dimmer switch must be in the neutral position
- Press the Auto High Beam ON/OFF switch located on the turn signal/multifunction switch
- Outside lighting conditions must be dark
- Vehicle speed greater than 25 MPH (40 km/h)

Automatic High Beam Assist System Operation

The following are conditions that the automatic high beam assist system will turn the high beam headlamps off during operation:

- The system detects approaching traffic headlamps
- The system detects preceding traffic tail lamps
- Ambient light level too high due to towns or twilight situations

- The vehicle's speed drops below 13 MPH (22 km/h)
- Delay

Note: Automatic high beam assist may not operate properly if any of the following conditions exist:

- Approaching and preceding vehicles lamps are undetectable due to dirt, snow, road spray, smoke, fog, or any other airborne conditions.
- The front camera module is covered with ice, dirt, snow, haze, or is obstructed.
- The vehicle is being driven on winding or hilly road conditions which would make any on coming vehicle headlamps undetectable by the automatic high beam assist system.

Automatic High Beam Assist System Deactivation

- Manually operating the turn signal/multifunction switch high beam dimmer switch from neutral to high beam position
- Press the Auto High Beam ON/OFF switch located on the turn signal/multifunction switch

Automatic High Beam Assist System Indicator

The status of the automatic high beam assist system is shown by a green indicator located on the instrument panel cluster. When automatic high beam assist is active, the indicator will be illuminated continuously. If the operator deactivates the automatic high beam assist system, the indicator will turn off.

Manual Headlamp Leveling

Each headlamp assembly contains a headlamp leveling actuator that is controlled by the headlamp leveling switch. The headlamp leveling switch is supplied with ignition voltage and contains a resistor ladder with 4 positions for adjusting the headlamps up or down. When the headlamp leveling switch is activated to the desired position, voltage from the B+ ignition circuit is pulled down through the resistor ladder and the voltage is applied to the left and right headlamp leveling actuators via the headlamp leveling control module. The headlamp leveling actuators are supplied with B+ and ground. When the headlamp leveling switch is activated, the left and right headlamp leveling actuators respond by moving the headlamps to the desired position.

Daytime Running Lamps

The daytime running lamps will illuminate continuously when the following conditions are met:

- The vehicle mode switch is in the RUN or CRANK position
- The shift lever is out of the PARK position for vehicles equipped with automatic transmissions or the parking brake is released for vehicles with manual transmissions
- The low and high beam headlamps are OFF

The ambient light sensor (T83) or rain sensor module (CE1) is used to monitor outside lighting conditions. The BCM monitors the ambient light sensor or rain sensor module via serial data to determine if outside lighting conditions are correct for either daytime running lights or automatic lamp control when the headlamp switch is in the AUTO position. In daylight conditions the BCM will command the designated daytime running lights ON. During low light conditions the BCM will command the low beam headlamps ON. Any function or condition that turns on the headlamps will cancel daytime running lights operation.

Flash to Pass

When the low beam headlamps are on and the turn signal/multi-function switch is momentarily placed in the flash to pass position, ground is applied to the turn signal/multi-function switch. The turn signal/ multifunction switch applies ground to the BCM through the flash to pass switch signal circuit. The BCM then applies ground to the high beam relay control circuit. This energizes the high beam relay, closing the switch side contacts of the high beam relay, applying battery voltage to the left and right high beam fuses. Battery voltage is applied from the high beam fuses through the high beam voltage supply circuit to the high beam headlamp assemblies. This causes the high beam headlamps to illuminate at full brightness momentarily or until the flash to pass switch is released.

Hazard Lamps

The hazard flashers may be activated in any power mode. The hazard switch signal circuit is momentarily grounded when the hazard switch is pressed. The body control module (BCM) responds to the hazard switch signal input by supplying battery voltage to all four turn signal lamps in an ON and OFF duty cycle. When the hazard switch is activated, the BCM sends a serial data message to the instrument panel cluster requesting both turn signal indicators to be cycled ON and OFF.

The instrument panel dimmer switch controls the brightness of the interior backlighting components. When the instrument panel dimmer switch is placed in a desired brightness position, the body control module (BCM) receives a signal from the instrument panel dimmer switch and responds by applying a pulse width modulated (PWM) voltage to the hazard switch light emitting diode (LED) backlighting control circuit illuminating the LED to the desired level of brightness.

Park, Tail, License, and Side Marker Lamps

The park lamps, tail lamps, license plate lamps, and side marker lamps are turned ON when the headlamp switch is placed in the PARK LIGHT or LOW BEAM position or anytime the headlights are requested. When the BCM receives a request from the headlamp switch to turn ON the park lamps the BCM will apply battery voltage to the left and right park lamp, side marker lamp, and license plate lamp control circuits illuminating the left and right park lamps, side marker lamps, and license plate lamps.

Stop Lamps

The brake pedal position (BPP) sensor is used to sense the action of the driver application of the brake pedal. The BPP sensor provides an analog voltage signal that will increase as the brake pedal is applied. The body control module (BCM) provides a low reference signal and a 5-volt reference voltage to the BPP sensor. When the variable signal reaches a voltage threshold indicating the brakes have been applied, the BCM will

apply battery voltage to the center high mounted stop lamp control circuit illuminating the center high mounted stop lamp.

Regen on Demand allows increased deceleration by pressing and holding the steering wheel paddle. It works in D (Drive) and L (Low). The accelerator pedal can be used to manage deceleration while using Regen on Demand. Cruise control will turn off and the brake lamps may come on when this feature is activated.

Turn Signal Lamps

Ground is applied at all times to the turn signal/ multifunction switch. The turn signal lamps may only be activated with the vehicle ON/OFF switch in the Service Mode or ON position. When the turn signal/ multi-function switch is placed in either the TURN RIGHT or TURN LEFT position, ground is applied to the BCM through either the right turn or left turn signal switch signal circuit. The BCM then applies a pulsating voltage to the front and rear turn signal lamps through their respective voltage supply circuits. When a turn signal request is received by the BCM, a serial data message is sent to the instrument cluster requesting the respective turn signal indicator be pulsed ON and OFF.

Backup Lamps

With the vehicle ON and the transmission in the REVERSE position, the transmission control module (TCM) sends a serial data message to the body control module (BCM). The message indicates that the gear selector is in the REVERSE position. The BCM applies battery voltage to the backup lamps control circuit illuminating the backup lamps. Once the driver moves the gear selector out of the REVERSE position, a message is sent by the TCM via serial data requesting the BCM to remove battery voltage from the backup lamps control circuit. The vehicle must be ON for the backup lamps to operate.

Battery Run Down Protection/ Inadvertent Power

To provide battery run down protection, the exterior lamps will be deactivated automatically under certain conditions. The BCM monitors the state of the headlamp switch. If the park or headlamp switch is ON when the vehicle mode switch is placed in either the CRANK or RUN position and then placed in the OFF position, the BCM initiates a 10 min timer. At the end of the 10 min, the BCM will turn off the control power output to the park lamp controls as well as the headlamp relay coils, deactivating the exterior lamps. This feature will be cancelled if any power mode other than OFF becomes active. The BCM will disable battery run down protection if any of the following conditions exist. The park or headlamp switch is placed in the ON to OFF position, and back to the ON position during battery run down protection. The BCM determined that the park or headlamp switch was not active when the vehicle mode switch was turned OFF.

Interior Lighting Systems Description and Operation

Interior Lamps

The interior lamps consist of 2 groups. The first group includes lamps that may not be dimmed.

- Courtesy lamps
- Dome lamps
- Reading lamps
- Rear compartment courtesy lamp
- Sunshade mirror lamps

Courtesy/Illuminated Entry Lamps

The following lamps may be manually turned ON by placing the interior lamp switch in the ON position, or by opening a door while the switch is in the AUTOMATIC LIGHT position.

- The dome lamp
- The liftgate lamps
- Courtesy lamps

The courtesy lamp supply voltage circuit of the body control module (BCM) supplies battery positive voltage to the dome lamp, the liftgate lamps and courtesy lamps. When any door is opened, the door jamb switch contacts close providing a door open input to the BCM. The BCM then provides a B+ to the interior lamps with the switch in the AUTO position. The interior lamps receive a ground when the switch is in the ON position.

Note: If the liftgate is opened after all the modules go to sleep, the dome light will not come on. The liftgate ajar switch input to the BCM will not wake up the BCM once it has gone to sleep, so the dome light will not come on. Once the BCM gets an input to wake it up, from remote keyless entry or a door handle, the dome light will turn on when the liftgate is opened.

If the driver inadvertently leaves any interior lamp ON, the BCM will turn it OFF after a 20 min time-out.

The courtesy lamps will turn OFF immediately if the vehicle ON/OFF switch is turned to the ON position or approximately 20 s after all doors are closed.

Dome Lamps

The dome lamp switch has 3 positions: DOOR, OFF, and ON. The ON position provides a ground for continuous operation and the dome lamps will remain illuminated until the switch is placed in either the DOOR or OFF position. When in the DOOR position, the dome lamps operation is controlled by the body control module (BCM). When any door is opened, the door ajar switch contacts close and the BCM receives a door-open input. The BCM illuminates the dome lamps when any door is opened or a door lock/unlock request is activated with the key fob. After all doors have been closed, the dome lamps will remain illuminated approximately 3 seconds after the last door closes. When the driver places the dome lamp switch in the OFF position, the dome lamps will be disabled. In the event that the dome lamps were to remain illuminated for more than 10 minutes with the ignition switch in the OFF position and no doors opened, the BCM will deactivate the dome lamps control circuit to prevent

total battery discharge. The dome lamps will turn OFF using the theater dimming feature when controlled by the BCM.

Reading Lamps

The inadvertent power supply voltage circuit from the BCM provides battery positive voltage to each reading lamp. When a reading lamp switch is activated, the switch contacts close providing a path to ground and the reading lamp illuminates. If the operator inadvertently leaves a reading lamp ON, the BCM will turn all interior lamps OFF after 10 min has passed since any switch activation has been detected by the BCM.

Rear Compartment Courtesy Lamp

When the rear compartment is opened, the rear compartment lid latch opens providing a rear compartment open input signal to the BCM. The BCM responds by applying battery voltage to the rear compartment courtesy lamp control circuit illuminating the rear compartment courtesy lamp.

Sunshade Mirror Lamps

The inadvertent power supply voltage circuit from the BCM provides battery voltage to each set of sunshade mirror lamps. When the sunshade mirror cover is opened, a switch closes providing ground and the sunshade lamps illuminate. If the operator inadvertently leaves a sunshade mirror cover open with the lamps ON, the BCM will turn all interior lamps OFF after 10 minutes has passed since any switch activation has been detected by the BCM.

Keyless Entry Interior Illumination

When the operator uses the keyless entry transmitter in order to unlock the doors, the BCM receives a door-unlock signal. The BCM must receive inputs from various systems that indicate that the ignition switch is OFF, the courtesy lamp switch is OFF, and all doors are closed before the BCM will activate the interior lamps. After all doors have been closed, the courtesy lamps will turn OFF immediately if the ignition switch is turned to the ON position, the door locks are LOCKED, or approximately 20 seconds after the last door closes. The BCM will turn off the courtesy lamps through the theater dimming feature. The BCM keeps the courtesy lamps on for 40 seconds after an alarm event is completed.

Interior Lamps Dimming

The second group includes lamps which may dim. This group may use a combination of vacuum fluorescent illumination, LEDs and incandescent lamps.

- Dome/reading lamps – front
- Dome/reading lamps – rear
- Door lock switch – driver
- Door lock switch – passenger
- Garage door opener switch
- Headlamp switch
- HVAC control head assembly
- Multifunction switch – instrument panel
- Outside rearview mirror switch
- Park brake switch
- Radio
- Roof beacon switch
- Seat memory switch – driver
- Sliding rear window switch
- Steering wheel control switch – left
- Steering wheel control switch – right
- Sun roof switch
- Sun roof tilt switch
- Window switch – driver
- Window switch – passenger

With the headlamp switch in the PARK or HEAD position, the park lamp switch signal circuit provides an input to the body control module (BCM). The BCM responds by applying voltage to the park lamps as well as the backlight dimming control circuits illuminating all components with interior backlighting. All interior backlighting turns ON at the dimming level indicated by the instrument panel dimmer switch. The instrument panel dimmer switch is a momentary type switch and utilizes a resistor ladder to increase and decrease the brightness of the interior backlighting components. The instrument panel dimmer switch provides a voltage signal to the BCM that will increase as the brightness of the lights are increased and decrease as the brightness of the lights are decreased. The BCM provides a low reference signal and a B+ circuit to the switch. When the instrument panel dimmer switch is held in the desired position, the dimmed voltage setting is applied from the instrument panel dimmer switch through the instrument panel dimmer switch signal circuit to the BCM. The BCM interprets the signal and applies a pulse width modulated (PWM) voltage through the backlighting control circuits illuminating the interior backlighting to the requested level of brightness.

Backlighting for some components may be controlled by the BCM via serial data. When the instrument panel dimmer switch is operated to the desired backlighting setting, the BCM sends a serial data message to the corresponding component requesting the backlighting be adjusted to the desired level.

Battery Rundown Protection/ Inadvertent Power

The BCM inadvertent power supply voltage circuit provides battery voltage to all of the interior courtesy lamps. In the event that any of these lamps were to remain illuminated for a period of more than 10 minutes with the ignition switch in the OFF position, the BCM will deactivate the inadvertent power supply voltage circuit to prevent total battery discharge. If the ignition switch is turned to any position other than OFF, or if a lamp switch is activated during this 10 minute period, the timer resets for another 10 minutes.

Mirrors

Description and Operation

Automatic Day-Night Mirror Description and Operation

Inside Rearview Mirror with the Automatic Day-Night Feature System Operation

The inside rearview mirror uses 2 photocell sensors. One sensor is the headlight sensor, located on the face side of the mirror. The headlight sensor is used to determine light conditions present at the mirror face. The other sensor is the ambient light sensor, located on the rear of the mirror or windshield side. The ambient light sensor is used to determine the exterior light conditions. With a low exterior light condition detected, and a high light condition from behind the car, at the headlight sensor, the inside rearview mirror will automatically darken the face of the mirror.

In the daytime, the mirror is in a normal state because of the high exterior light condition that is indicated by the ambient light sensor. With the gear selector lever in the REVERSE position and the Ignition ON/Vehicle in Service Mode, backup lamp supply voltage is supplied as an input to the inside rearview mirror. The mirror monitors this input to disable the automatic day-night feature. This allows the driver to see objects in the mirror clearly when backing up, even during the night.

Driver Outside Rearview Mirror with Automatic Day-Night System Operation (If Equipped)

The automatic day-night feature of the driver outside rearview mirror is controlled by the inside rearview mirror. The inside rearview mirror supplies control and low reference to the driver outside rearview mirror. At night, with the automatic day-night feature enabled, the driver outside rearview mirror will automatically darken with the inside rearview mirror to reduce glare from headlamps behind the vehicle.

Inside Rearview Camera Full Display Mirror System Operation

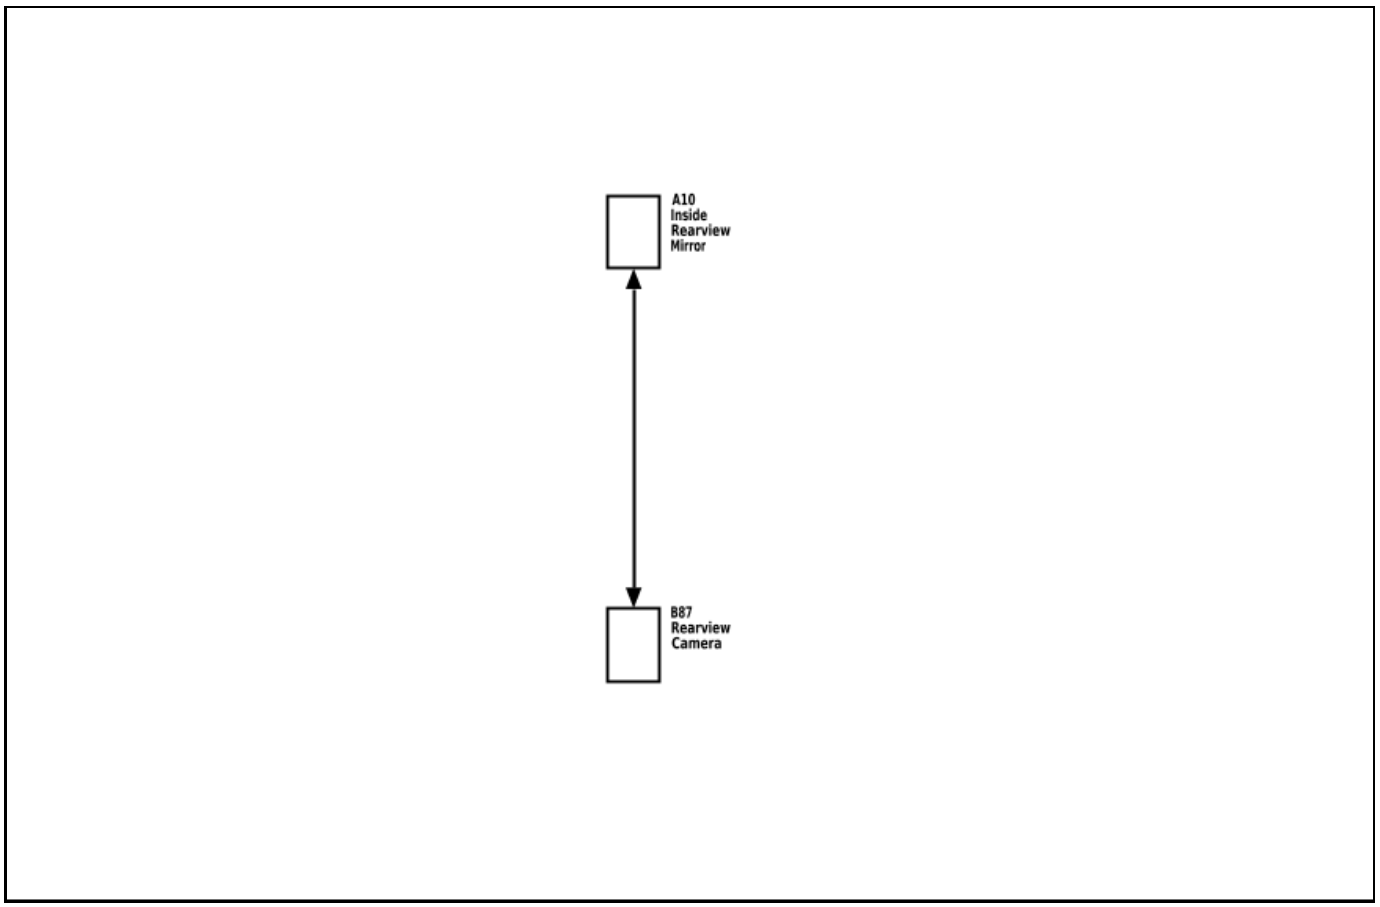
The inside rearview camera full display mirror is connected to the outside rearview camera via a shielded coaxial cable. When the tab under the inside rearview mirror is pulled rearward, a view of the area behind the vehicle displays on the mirror. Adjust the rearview mirror for a clear view of the area behind the vehicle before turning on full display mirror. Use the button on the back of the mirror to adjust the brightness of the display. Make sure the light sensor is not covered when adjusting the brightness.

The inside rearview camera full display mirror may not work properly or display a clear image if:.

- It is dark.
- The sun or the beam of headlamps are shining directly into the camera lens.
- Ice, snow, mud, or anything else builds up on the camera lens. Clean the lens, rinse it with water, and wipe it with a soft cloth.

When the mirror detects that the camera is not sending a valid video signal, it “blue screens” with a “no video” decal for 3 seconds, then reverts back to the mirror. Meanwhile, if a blue screen keeps on displaying instead of the camera view, take the vehicle to your dealer for service.

Rearview Camera Full Display Mirror Block Diagram



4433072

Outside Mirror Description and Operation

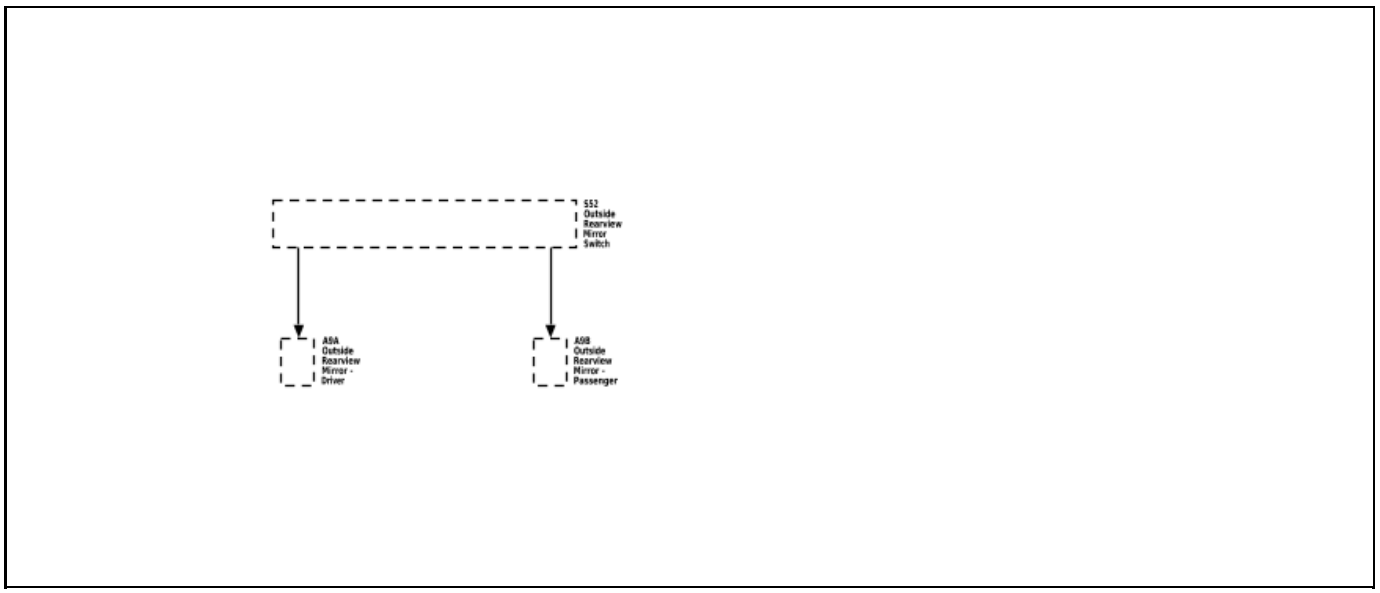
Power Mirror System Components

The power mirror system consists of the following components:

- Outside rearview mirror switch
- Mirror selector switch
- Driver outside rearview mirror
- Passenger outside rearview mirror

Each of the outside rearview mirror contains two motors. The vertical motor operates the mirror in the up and down directions, and the horizontal motor operates the mirror in the left and right directions.

Power Mirrors Without A45 Block Diagram



3270441

Power Mirror System Controls

The outside rearview mirror switch is a four position directional switch: Up, Down, Left and Right.

The mirror select switch is a three position switch: left, neutral/fold, and right.

Power Mirror System Operation

The outside rearview mirror switch receives battery voltage from the underhood fuse block The power mirror switch also receives a constant ground.

The four positions of the direction switch have dual switch contacts. Each of the contacts are connected to opposing sides of the appropriate power mirror motors through the selector switch. The selector switch completes these circuits depending on the position of the selector switch, L or R.

If the selector switch is placed in the L position and the up switch is pressed, battery voltage will be supplied to the left outside rearview mirror vertical motor through the left mirror motor vertical control circuit and ground through the left mirror motor common control circuit. If the down switch is pressed, battery voltage will be supplied to the left outside rearview mirror vertical motor through the left mirror motor common control circuit and ground through the left mirror motor vertical control circuit.

The remainder of the mirror functions operate in the same manner as described above. Placing the power mirror switch in opposing positions, left/right or up/down, will reverse the polarity to the mirror motor, reversing the direction of movement.

Heated Mirrors (If Equipped)

The heated mirrors are controlled through the rear defog relay. Whenever the rear window defogger is turned on battery voltage is supplied to the mirror heater elements through the left and right mirror heater element control circuits.

Description and Operation

Charge Port Door Description and Operation

Charge Port System Components

The charge port system consists of the following components:

- Charge port door position sensor
- Hybrid/EV powertrain control module 2

Charge Port Ajar Message

When the vehicle is in the Service Mode or ON, the hybrid/EV powertrain control module 2 supplies a 5V signal to the charge port door position switch through the charge port door sensor signal circuit. The charge port door position switch contains a resistor ladder interface for switch position between two resistors for sensing used by the hybrid/EV powertrain control module 2 to determine if the charge port door is in the open position or the closed position. The hybrid/EV powertrain control module 2 sends a serial data message to the driver information center in the instrument panel cluster to display the Charge Door Open message.

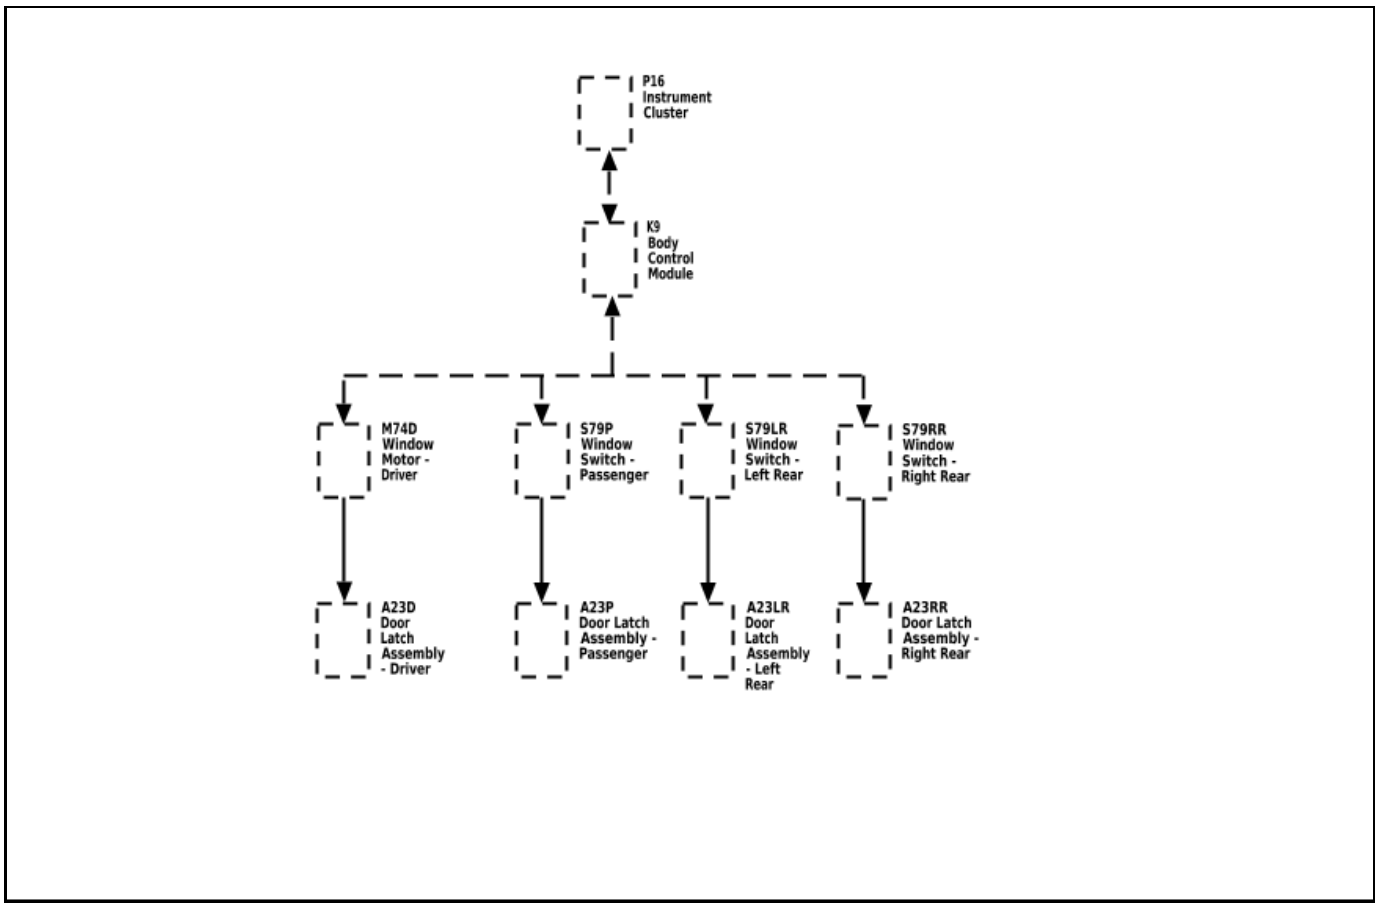
Door Ajar Indicator Description and Operation

Door Ajar Indicator System Components

The door ajar indicator system consists of the following components:

- Body control module (BCM)
- Instrument cluster
- Driver door latch
- Passenger door latch
- Left rear door latch
- Right rear door latch
- Driver window motor
- Passenger window switch
- Left rear window switch
- Right rear window switch

Door Ajar Indicator With AXG/AED/AEQ Block Diagram



3270438

Driver Door Ajar

The driver window motor provides a 12V signal to the driver door ajar switch signal circuit. The driver door ajar switch is integral to the driver door latch assembly. When the driver door is opened, the normally open door ajar switch closes. With the door ajar switch closed, ground is provided to the door ajar switch signal circuit and the voltage within the signal circuit drops. The driver window motor will detect the voltage drop and will send a serial data message to the body control module which will then send a message to the instrument panel cluster to command the door ajar message

Passenger Door Ajar

The passenger window switches each provide a 12 V signal to their respective door ajar switch signal circuits. The door ajar switches are integral to each door latch assembly. When a door is opened, the normally open door ajar switch closes. With the door ajar switch closed, ground is provided to the door ajar switch signal circuit and the voltage within the signal circuit drops. The window switches will detect the voltage drop and will send a serial data message to the body control module which will then send a message to the instrument panel cluster to command the door ajar message.

Hood Ajar Indicator Description and Operation

Hood Ajar Switch

The body control module (BCM) applies B+ to the hood ajar signal circuit and monitors the voltage to determine the position of the hood. When the hood is closed, the switch is open and voltage remains high. When the hood is open, the switch is closed and the voltage is pulled low.

The BCM uses the hood ajar switch as a content theft deterrent alarm trigger.

Liftgate Ajar Indicator Description and Operation

Hatch Open Indicator

The body control module (BCM) monitors the voltage level of the rear hatch ajar signal circuit which is normally at the system voltage when the hatch is closed. When the hatch is ajar or open, a switch within the rear hatch latch closes providing a path to ground for the hatch ajar signal circuit. The voltage within the signal circuit will then drop to 0 volts, the BCM will then detect the voltage drop and will send a serial data message to the instrument panel cluster (IPC). The IPC will then display an icon of the vehicle with the hatch open.

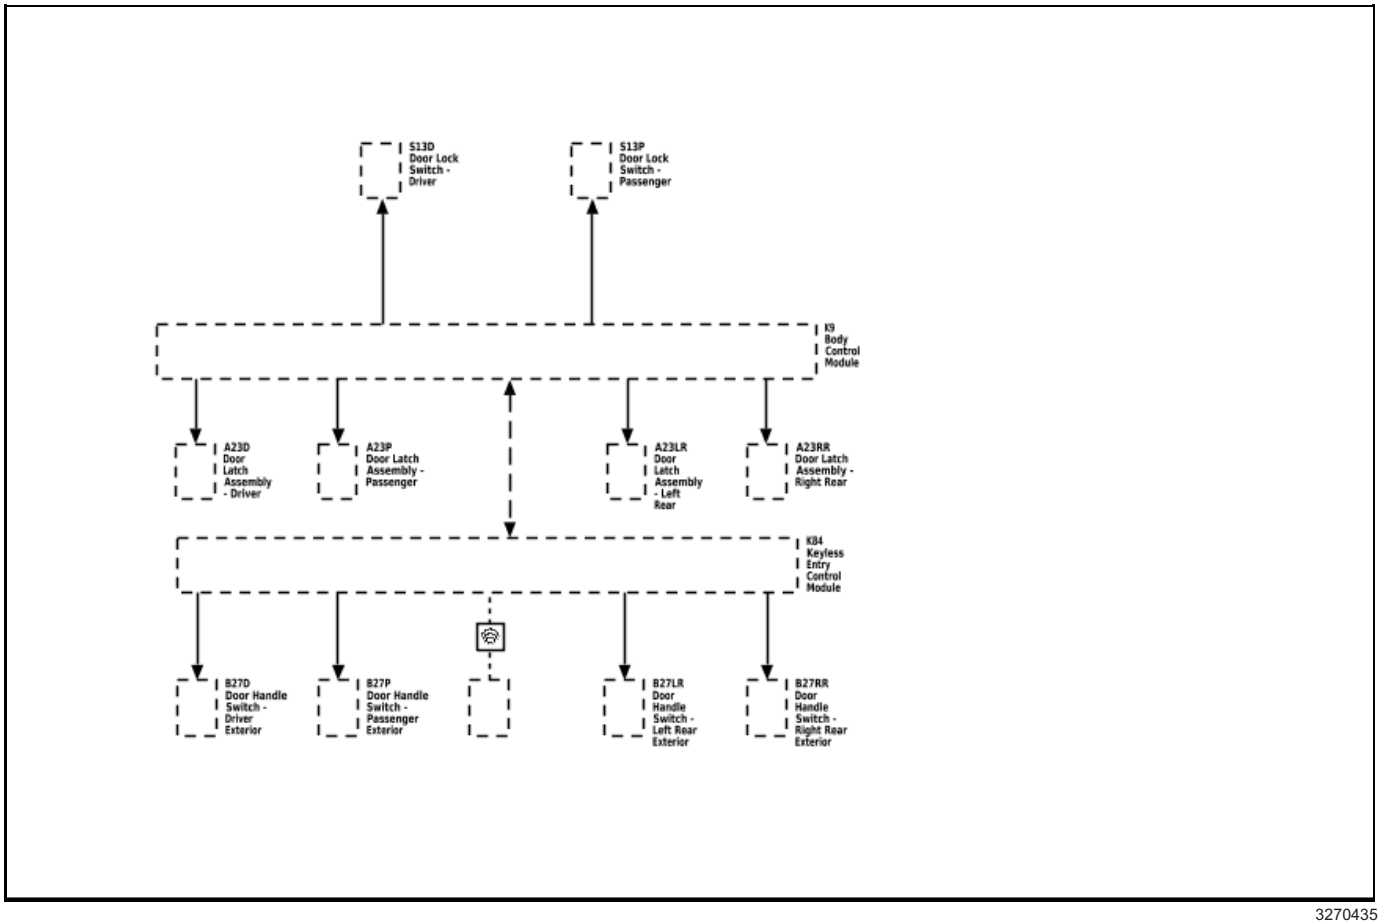
Power Door Locks Description and Operation

Door Lock System Components

The power door lock system consists of the following components:

- Driver door lock switch
- Passenger door lock switch
- Key cylinder switch
- Body control module (BCM)
- Driver door latch
- Passenger door latch
- Left rear door latch
- Right rear door latch
- Exterior door handle switches
- Keyless entry control module

Power Door Locks Block Diagram



3270435

Door Lock and Unlock Operation

When the driver or passenger door lock switch is activated in the lock or unlock position, the BCM will receive a ground signal on either the door lock switch lock or unlock signal circuits.

The BCM, upon receipt of a lock switch lock or unlock signal, will supply battery voltage to the door lock actuator lock or unlock control circuits. Since the opposite side of the lock actuator is connected to ground through the other lock actuator control circuit, the doors will then lock or unlock as commanded.

The following three circuits are used to operate the lock:

- Driver door unlock
- Passenger door unlock
- All door lock

The driver door lock actuator is isolated so it can be unlocked by itself using the keyless entry transmitter.

Key Cylinder Switch

The driver window switch monitors the voltage level of the driver door lock motor status signal circuit. When the key is inserted into the driver door key cylinder and turned to the Lock position, a switch within the driver door latch closes causing the voltage to drop within the driver door lock motor status signal circuit. The driver window switch will detect the drop in voltage and will send a serial data message to the BCM commanding all the doors to Lock.

The driver key cylinder switch is used by the customer for programming the keyless entry transmitters, The driver window/outside rearview mirror switch monitors the voltage level of the key switch unlock signal circuit and when it detects a reprogramming request, it will send a serial data message to the body control module.

Passive Door Lock/Unlock Operation

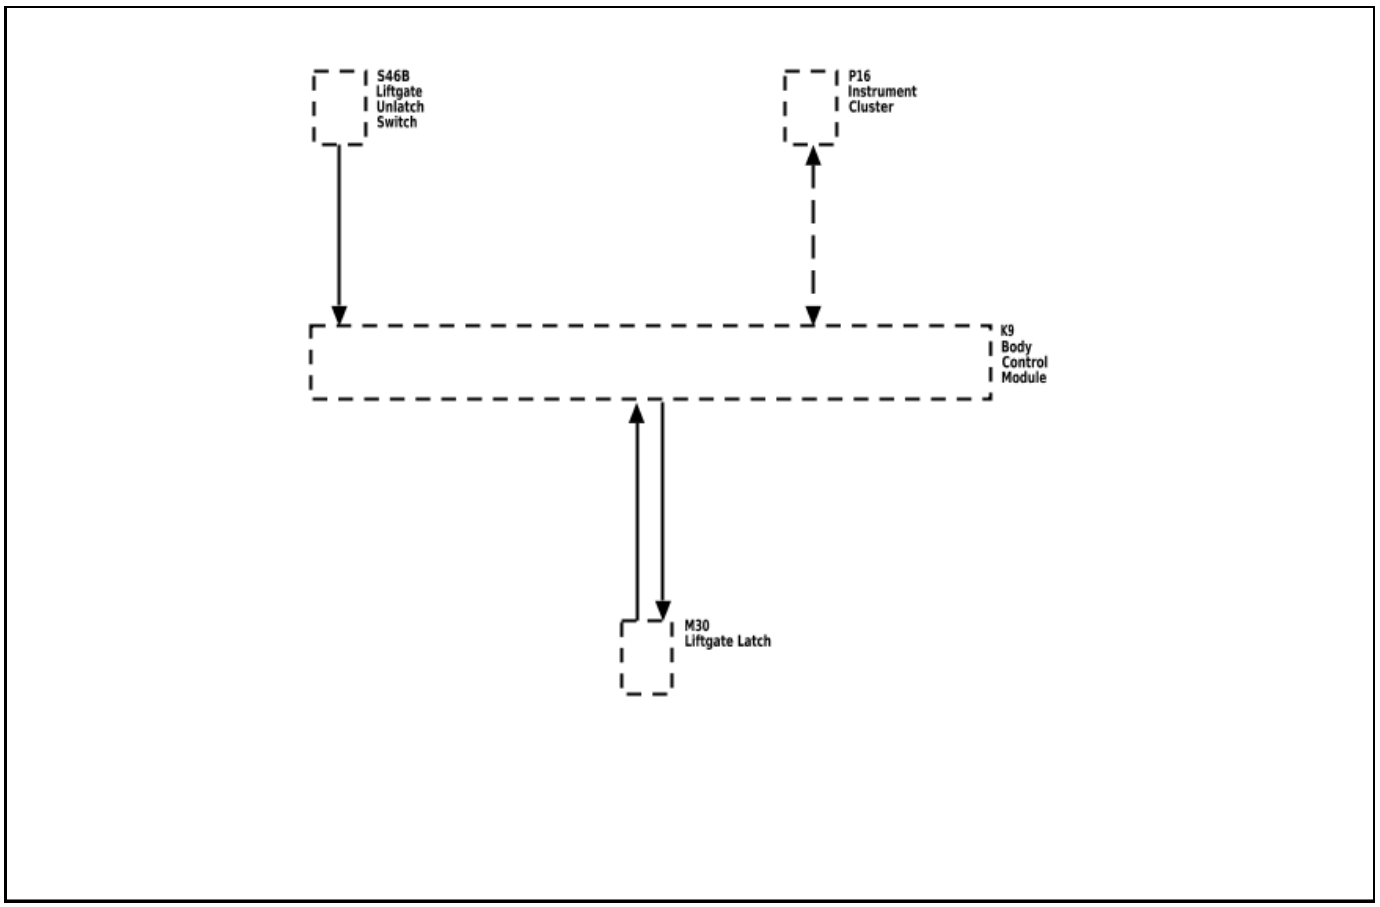
The exterior door handle switch signal circuits provide inputs to the keyless entry control module when the exterior door handle switches are activated. These inputs allow the keyless entry control module to detect a door lock or a door unlock request. The keyless entry control module provides a 12 V signal to each exterior door handle switch via the door handle switch signal circuits. When a door handle switch is pressed, the switch closes and the voltage signal within the signal circuit is pulled to ground. The keyless entry control module will detect the voltage drop and a low frequency antenna will transmit a challenge to the keyless entry transmitter. If the challenge is met, the keyless entry transmitter will respond and the keyless entry control module will send a serial data message to the body control module to command the door(s) to be locked or unlocked

Rear Hatch/Gate Description and Operation

Liftgate Release System Components

- Body control module (BCM)
- Liftgate unlatch switch
- Liftgate latch assembly
- Liftgate unlatch relay

Liftgate Release Block Diagram



3635551

Liftgate Release Operation

Liftgate Unlatch Switch

The BCM monitors supplies a 12 V signal to the liftgate unlatch switch so that when the switch is pressed, the voltage within the signal circuit is pulled low and in response, the BCM will detect the voltage drop and check the status of the door lock system. If the doors are locked, the BCM will ignore the request, if the All Doors Unlock has been commanded, the BCM will recognize the request and will provide voltage to the release relay.

Liftgate Latch Assembly

When BCM receives a liftgate release command from the liftgate unlatch switch, the BCM applies brief pulse of voltage to the liftgate unlatch relay control circuit, which energizes the coil side of the relay. The switch side of the liftgate unlatch relay then momentarily closes, supplying a brief pulse of battery positive voltage to the liftgate latch assembly. The liftgate latch assembly is continuously grounded and when it receives the voltage pulse, it will become energized and the latch will activate releasing the liftgate so that it may be manually raised to an open position.

Keyless Entry Transmitter

All doors of the vehicle must first be commanded to UNLOCK prior to pressing the liftgate unlatch switch. The BCM monitors the status of the vehicle door latches. If the passenger doors are locked, the BCM will ignore the signal from the liftgate unlatch switch. Pressing the appropriate button on the keyless entry transmitter will send a request to the remote control door lock receiver which will in turn send a serial data message to unlock all doors.

Description and Operation

Rearview Camera Full Display Mirror Description and Operation

If equipped, full display mirror provides a wider field of view than normally seen from the inside rearview mirror to assist when driving and changing lanes. When the tab under the inside rearview mirror is pulled rearward, a view of the area behind the vehicle displays on the mirror. The inside rearview camera full display mirror is connected to the outside rearview camera via a shielded coaxial cable.

When the tab under the inside rearview mirror is pulled rearward, a view of the area behind the vehicle displays on the mirror.

Adjust the rearview mirror for a clear view of the area behind the vehicle before turning on full display mirror. Use the three buttons on the bottom of the mirror to adjust the brightness, zoom, and tilt of the display. Make sure the light sensor is not covered when adjusting the brightness.

The inside rearview camera full display mirror may not work properly or display a clear image if:.

- It is dark.
- The sun or the beam of headlamps are shining directly into the camera lens.
- Ice, snow, mud, or anything else builds up on the camera lens. Clean the lens, rinse it with water, and wipe it with a soft cloth.

When the mirror detects that the camera is not sending a valid video signal, it “blue screens” with a “no video” decal for 3 seconds, then reverts back to the mirror.

Rear Vision Camera Description and Operation

Rear Vision Camera System Operation

The rear vision camera system consists of a video camera/module located at the rear of the vehicle and the radio.

The rear vision camera receives ignition voltage and a constant ground to power the camera. Video signal + and video signal – circuits carry the video image from the rear vision camera to the infotainment display. Additionally, the video signal circuits are shielded to prevent any interference which may lead to a loss of video signal resolution and a degraded video image. The shield is provided a ground path by the rear vision camera. When the transmission is placed into REVERSE, the Radio displays the video image.

The following conditions may cause a degraded rear vision camera image:

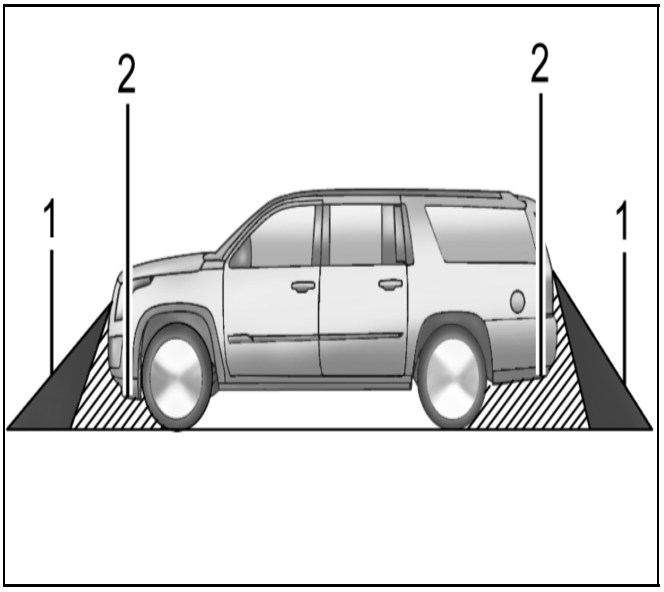
- Ice, snow, or mud has built up on the rear vision camera
- Dark conditions
- Extreme light conditions, such as glare from the sun or the headlights of another vehicle
- Damage to the rear of the vehicle
- Extreme high temperatures or extreme temperature changes

If a malfunction is detected in the system, Service Rear Vision Camera may be displayed on the infotainment display as an indicator to the customer that a problem exists that requires service.

Starting the vehicle and immediately placing the shifter in Reverse can also cause the Rear Vision Camera guidelines to not be present during that Reverse cycle due to the system not being given enough time to fully initialize. If safely coming to a stop, placing the transmission in Park for a moment, and then shifting to Reverse again restores the Rear Vision Camera guidelines, this scenario is normal and no repair attempts should be made.

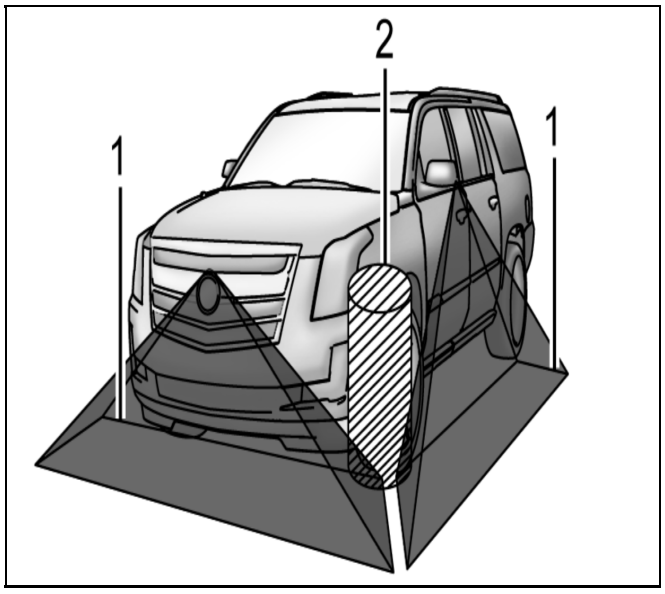
Surround Vision Camera Description and Operation (UVH)

Warning: The Surround Vision cameras have blind spots and will not display all objects near the corners of the vehicle. Folding outside mirrors that are out of position may not display surround view correctly. Always check around the vehicle when parking or backing.



4291164

1. View Displayed by the Surround Vision Camera
2. Area Not Shown



4291749

1. View Displayed by the Surround Vision Camera
2. Area Not Shown

The surround vision camera system consists of the following components:

- B87 Rearview Camera
- B174G Frontview Camera – Grille
- K157 Video Processing Control Module
- A11 Radio **OR** K74 Human Machine Interface Module
- B225L Sideview Camera – Left
- B225R Sideview Camera – Right

When the vehicle is traveling at speeds slower than 6 mph (10kph) the video processing control module will power up the cameras and send a video signal to the radio or human machine interface module.

The following conditions may cause a degraded surround vision camera image:

- Ice, snow, or mud has built up on the rear vision camera
- Dark conditions
- Extreme light conditions, such as glare from the sun or the headlights of another vehicle
- Damage to the rear of the vehicle
- Extreme high temperatures or extreme temperature changes

Surround Vision displays an overhead view of the area surrounding the vehicle, along with the front or rear camera views in the center stack. The front camera is in the grille or near the front emblem, the side cameras are on the bottom of the outside rearview mirrors, and the rear vision camera is above the license plate.

Features of the Surround Vision System

- Rear camera (B87 Rearview Camera) view alongside overhead view is displayed in reverse
- Front camera (B174G Frontview Camera – Grille) view alongside overhead view is displayed after shifting out of reverse to Neutral or Drive
- Will display front view when front park assist object is within trigger range calibration value (30 cm (12 in) in a forward gear
- Image is removed from display when vehicle speed exceeds speed calibration (10kph/6 mph) or button press / screen touch

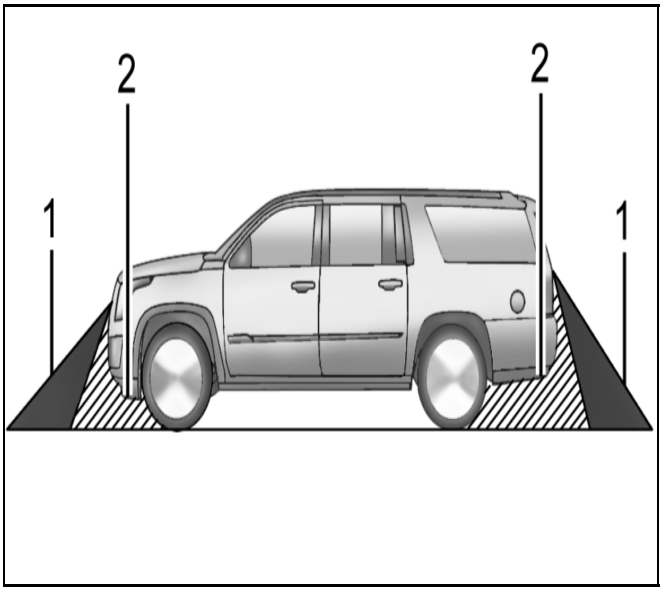
System Operation

The video processing control module sends voltage and a constant ground to power the cameras. Video signal + and video signal – circuits carry the video image from the cameras to the video processing control module for processing. The video processing control module will then send the processed image output to infotainment system by Video signal + and video signal – circuits. Additionally, all the video signal circuits are twisted and shielded to prevent any interference which may lead to a loss of video signal resolution and cause a degraded video image. These circuits must not be spliced/removed from shielding or will cause image degradation.

The video processing control module receives CAN information from Rear Park Assist object detection module and Steering Wheel angle from body control module during Reverse. A warning triangle may display during the 360 surround view screen if Rear Parking Assist has detected an object during a reverse. This triangle changes from amber to red and increases in size the closer the object. Also a dynamic guideline is displayed in Reverse to show the projected path of the vehicle.

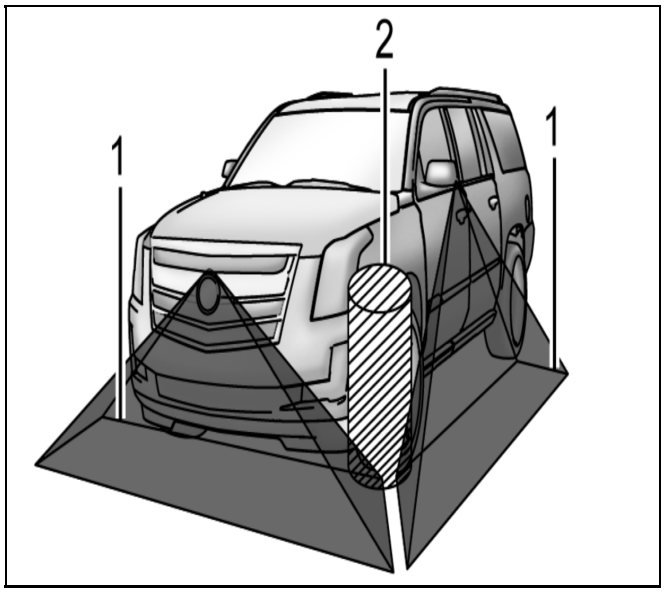
Surround Vision Camera Description and Operation (UV2)

Warning: The Surround Vision cameras have blind spots and will not display all objects near the corners of the vehicle. Folding outside mirrors that are out of position may not display surround view correctly. Always check around the vehicle when parking or backing.



4291164

1. View Displayed by the Surround Vision Camera
2. Area Not Shown



4291749

1. View Displayed by the Surround Vision Camera
2. Area Not Shown

The surround vision camera system consists of the following components:

- B87 Rearview Camera
- B174G Frontview Camera – Grille
- K157 Video Processing Control Module
- A11 Radio **OR** K74 Human Machine Interface Module
- B225L Sideview Camera – Left
- B225R Sideview Camera – Right
- X20 Memory Card Receptacle (with XVR)

When the vehicle is traveling at speeds slower than 6 mph (10kph) the video processing control module will power up the cameras and send a video signal to the radio or human machine interface module.

The following conditions may cause a degraded surround vision camera image:

- Ice, snow, or mud has built up on the rear vision camera
- Dark conditions
- Extreme light conditions, such as glare from the sun or the headlights of another vehicle
- Damage to the rear of the vehicle
- Extreme high temperatures or extreme temperature changes

Surround Vision displays an overhead view of the area surrounding the vehicle, along with the front or rear camera views in the center stack. The front camera is in the grille or near the front emblem, the side cameras are on the bottom of the outside rearview mirrors, and the rear vision camera is above the license plate.

Note: Images from the Sideview Cameras are only displayed when both front doors are properly closed.

Features of the Surround Vision System

- Rear camera (B87 Rearview Camera) view alongside overhead view is displayed in reverse
- Front camera (B174G Frontview Camera – Grille) view alongside overhead view is displayed after shifting out of reverse to Neutral or Drive
- Will display front view when front park assist object is within trigger range calibration value (30 cm (12 in) in a forward gear
- Image is removed from display when vehicle speed exceeds speed calibration (10kph/6 mph) or button press / screen touch

System Operation

The video processing control module is connected to each camera via a shielded coaxial cable. The coaxial cable provides power for the camera and also carries the video image from the cameras to the video processing control module for processing. The video processing control module will then send the processed image output to infotainment system via another coaxial cable.

The video processing module receives various vehicle information (such as steering wheel angle, object detection, etc) from other sources such as parking assist modules and the Body Control Module via serial data. This information is used to produce the enhanced surround vision system images that include a warning triangle that may display if an object is detected nearby. This triangle changes from amber to red and increases in size as the object gets closer to the vehicle. Also, dynamic guidelines are displayed in Reverse to show the projected path of the vehicle based on steering wheel angle. Due to this use of vehicle information, any faults or DTCs in these related systems can prohibit proper surround vision operation.

If equipped, the video processing control module system may have a memory card receptacle (with XVR) located in the trunk. The memory card receptacle interfaces with the video processing control module via a USB cable. The memory card receptacle also receives fused battery voltage and ground from the video processing control module. The video processing control module uses the memory card as a mass storage device, similar to a USB storage device.

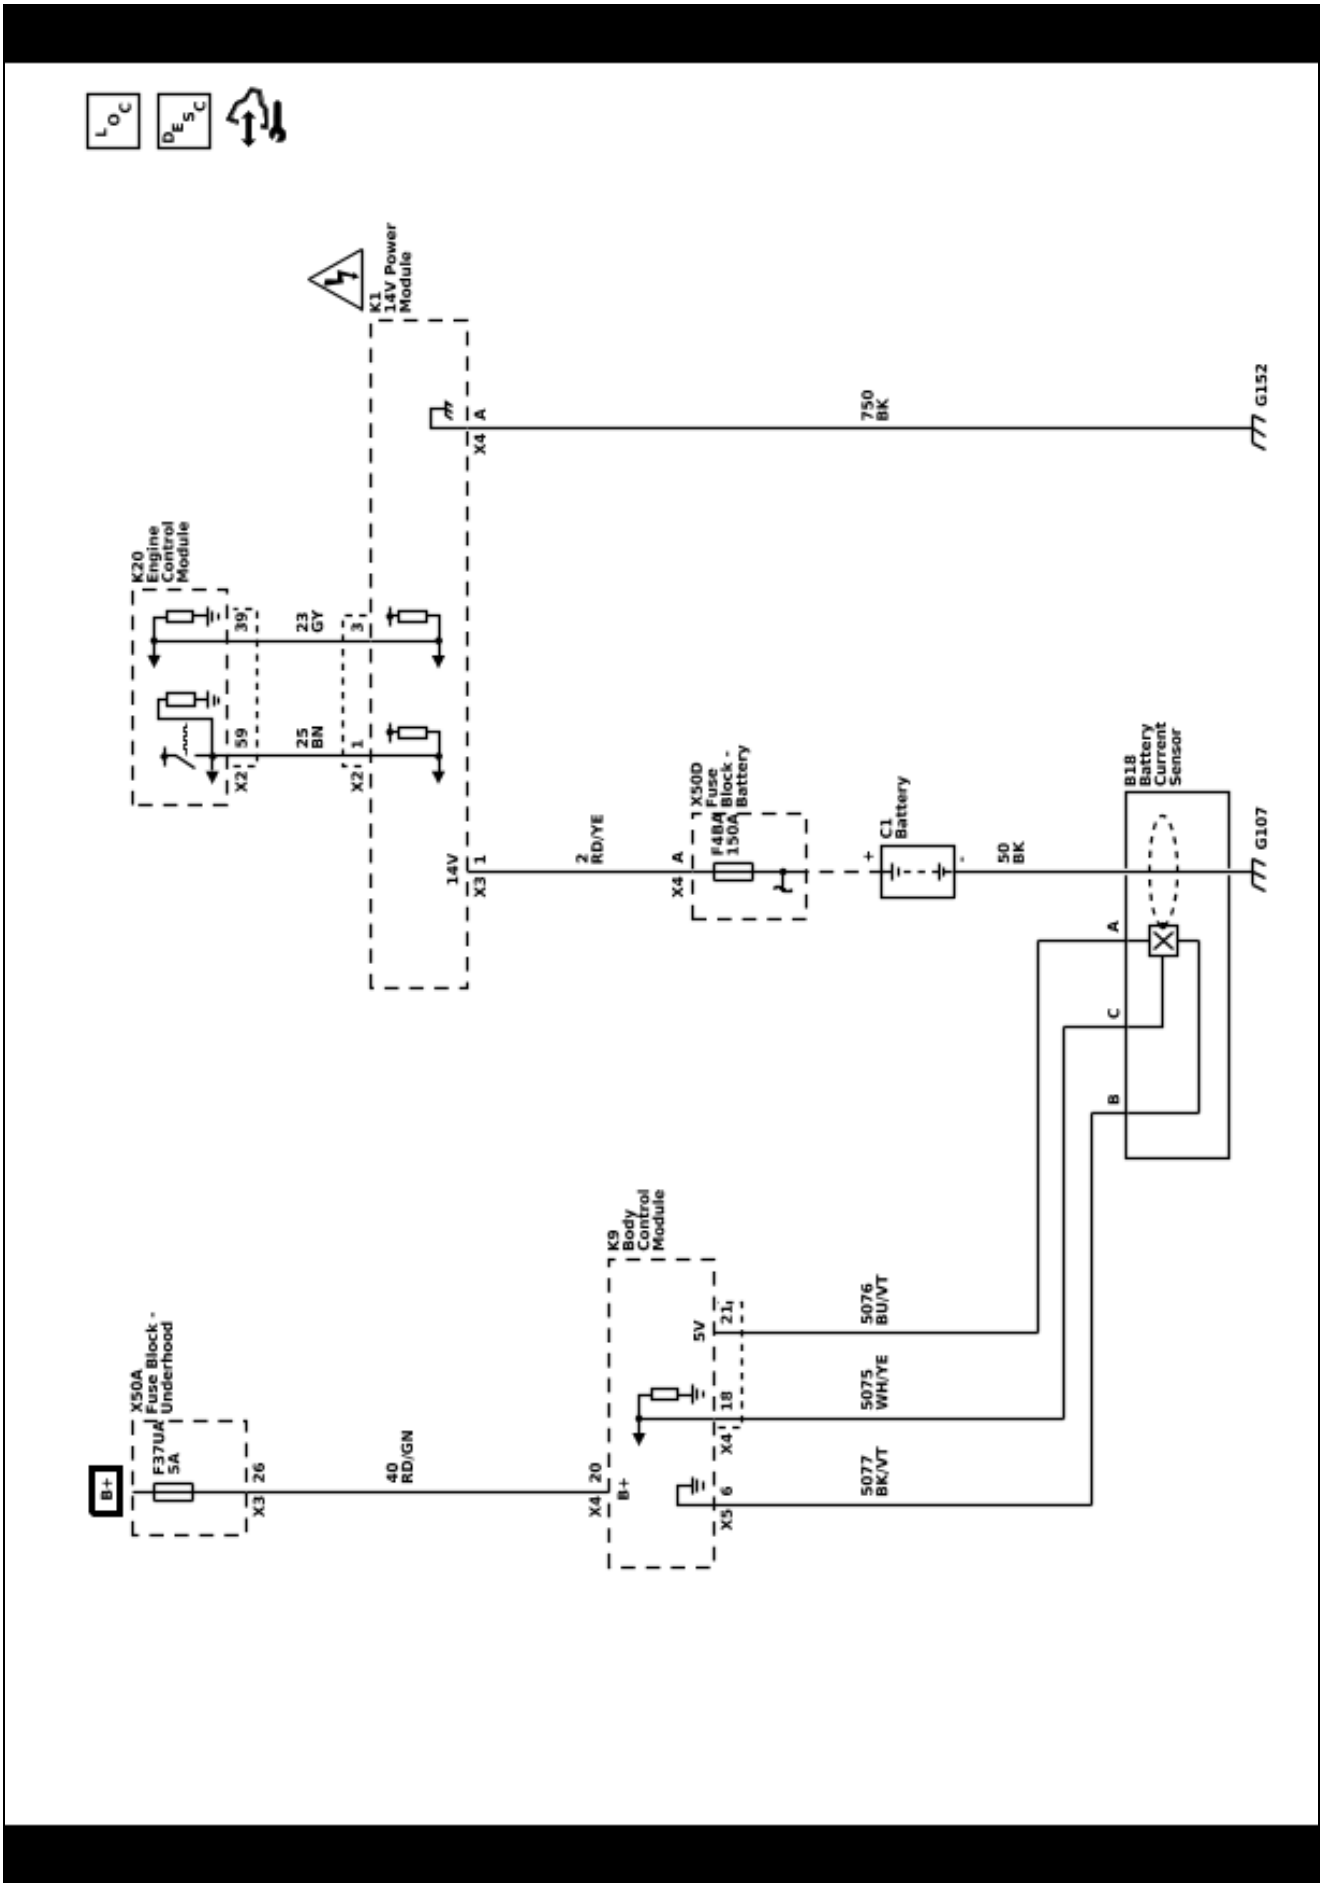
Engine/Propulsion

BLANK

12 V Starting and Charging

Schematic and Routing Diagrams

Starting and Charging Schematics (12V Battery Management)



Description and Operation

Battery Description and Operation

300 V Battery

For information about the 355 V hybrid drive motor battery, refer to Drive Motor Battery System Description.

Absorbent Glass Mat Battery

This vehicle is equipped with an absorbent glass mat battery. This is similar to current vehicle lead acid flood batteries, except they use glass mats that absorb electrolytes that are pressed between the plates instead of immersing the plates in electrolytes. This allows a smaller, lighter battery with the same amount of power and is less susceptible to heat.

The maximum permissible voltage allowed for the absorbent glass mat battery is 14.8 V (at room temperature).

12 V Battery

Warning: Batteries produce explosive gases, contain corrosive acid, and supply levels of electrical current high enough to cause burns. Therefore, to reduce the risk of personal injury when working near a battery:

- ***Always shield your eyes and avoid leaning over the battery whenever possible.***
- ***Do not expose the battery to open flames or sparks.***
- ***Do not allow the battery electrolyte to contact the eyes or the skin. Flush immediately and thoroughly any contacted areas with water and get medical help.***
- ***Follow each step of the jump starting procedure in order.***
- ***Treat both the booster and the discharged batteries carefully when using the jumper cables.***

Note: Because of the materials used in the manufacture of automotive lead-acid batteries, dealers and service shops that handle them are subject to various regulations issued by OSHA, EPA, DOT, and various state or local agencies. Other regulations may also apply in other locations. Always know and follow these regulations when handling batteries.

Batteries that are no longer wanted must be disposed of by an approved battery recycler and must never be thrown in the trash or sent to a landfill.

Batteries that are not part of the vehicle itself, not the battery under the hood, must only be transported on public streets for business purposes via approved hazardous material transportation procedures.

Battery storage, charging and testing facilities in repair shops must meet various requirements for ventilation, safety equipment, material segregation, etc.

The maintenance free battery is standard. There are no vent plugs in the cover. The battery is completely sealed except for 2 small vent holes in the side. These vent holes allow the small amount of gas that is produced in the battery to escape.

Battery Ratings

A battery has 2 ratings:

- Cold cranking amperage
- Amp hours

When a battery is replaced use a battery with similar ratings. Refer to the battery specification label on the original battery.

Amp Hours

The amp hour rating tells you how much amperage is available when discharged evenly over a 20 hour period. The amp hour rating is cumulative, so in order to know how many constant amps the battery will output for 20 hours, you have to divide the amp hour rating by 20. Example: If a battery has an amp hour rating of 74, dividing by 20 = 3.75. Such a battery can carry a 3.75 A load for 20 hours before dropping to 10.5 V. (10.5 V is the fully discharged level, at which point the battery needs to be recharged.) A battery with an amp hour rating of 55 will carry a 2.75 A load for 20 hours before dropping to 10.5 V.

Cold Cranking Amperage

The cold cranking amperage is an indication of the ability of the battery to crank the engine at cold temperatures. The cold cranking amperage rating is the minimum amperage the battery must maintain for 30 seconds at –18°C (0°F) while maintaining at least 7.2 V. Refer to the battery specification label on the original battery for the cold cranking amperage rating for this vehicle.

Charging System Description and Operation

12 V Battery

The following information is for the 12 V battery only.

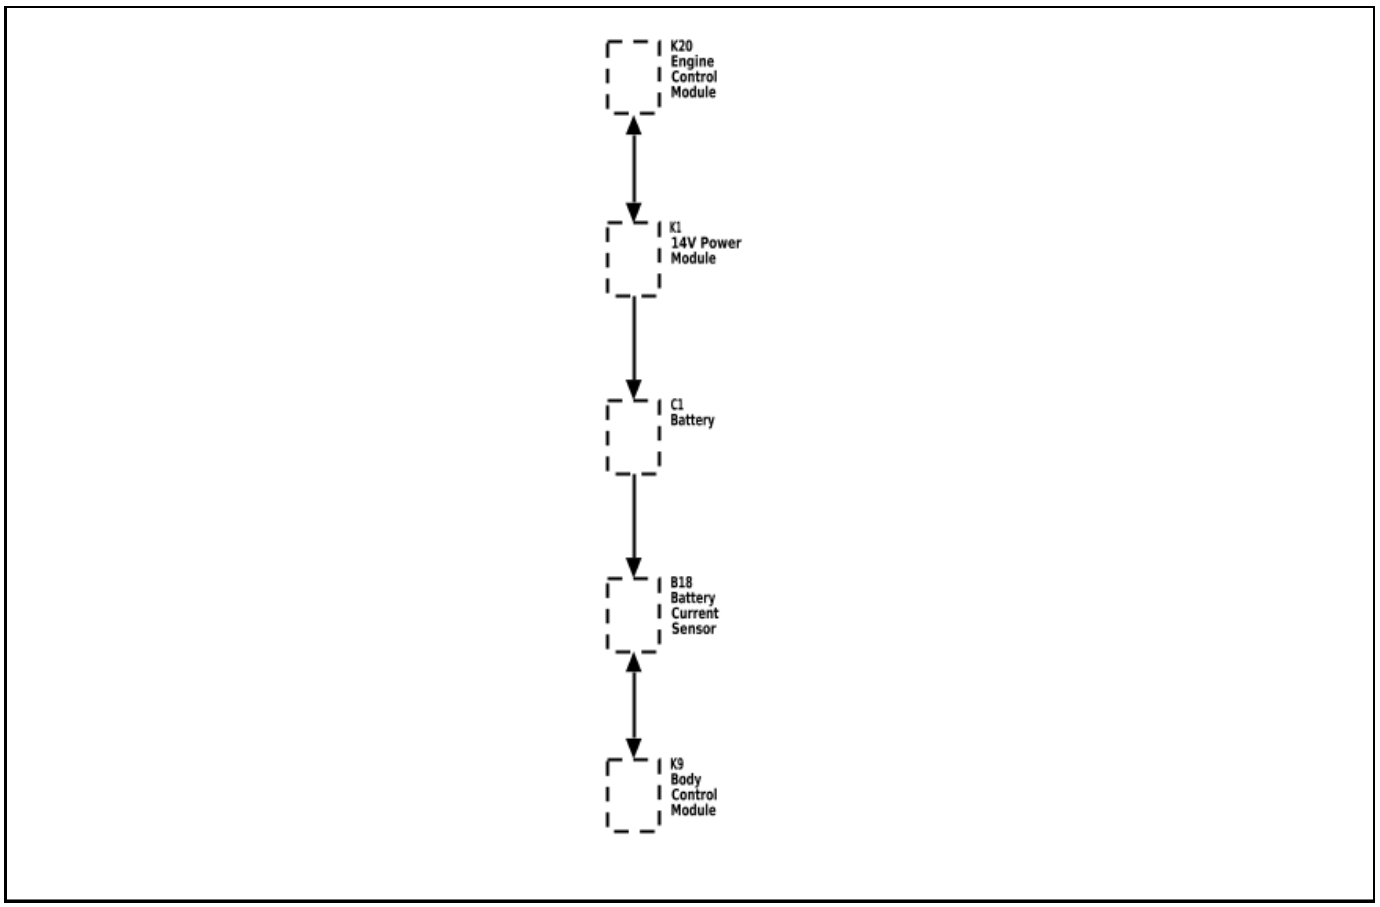
For information about charging the high voltage drive motor batteries, refer to Drive Motor Battery System Description.

Charging System Operation

The purpose of the charging system is to maintain the battery charge and vehicle loads. The main difference between a conventional generator charging system and this system is that the generator has been replaced by the 14V Power Module. The 14V Power Module provides the power to charge the battery from the high voltage system. There are 7 modes of operation and they include:

- Battery Sulfation Mode
- Normal Mode
- Fuel Economy Mode
- Headlamp Mode
- Voltage Reduction Mode
- Battery Maintenance Mode
- Plant Assembly Mode

Charging Block Diagram



3603729

Charging System Components

14 V Power Module

The 14V Power Module provides the power to charge the battery from the high voltage system. The ECM provides a pulse width charge request signal (L Terminal) to the 14V Power Module. The 14V Power Module returns a PWM feedback signal (F Terminal) to the ECM. The 14V Power Module reports status and fault modes as a function of duty cycle. The 14V Power Module charges the battery based on the ECM signal.

Drive Motor/Generators

The drive motor/generators are serviceable components located within the transmission housing. When the rotors are spun, an alternating current (AC) is induced into the stator windings. This AC voltage is then sent to the drive motor generator power inverter module (PIM) where it is converted to high voltage direct current (DC) power. The output of the PIM is converted into low voltage electrical power by the accessory DC power converter module 14V Power Module for use by the vehicle's electrical system to maintain electrical loads and battery charge.

Body Control Module (BCM)

The body control module (BCM) is a GMLAN device. It communicates with the engine control module (ECM) and the instrument panel cluster for electrical power management operation. The BCM determines the desired voltage set point and sends the information to the engine control module (ECM) which sends this information to the 14V Power Module. The BCM monitors a battery current sensor, the battery positive voltage circuit, and estimated battery temperature to determine battery state of charge.

Battery Current Sensor

The battery current sensor is a serviceable component that is connected to the negative battery cable at the battery. The battery current sensor is a 3-wire hall effect current sensor. The battery current sensor monitors the battery current. It directly inputs to the BCM. It creates a 5 V pulse width modulation (PWM) signal of 128 Hz with a duty cycle of 0–100 percent. Normal duty cycle is between 5–95 percent. Between 0–5 percent and 95–100 percent are for diagnostic purposes.

Engine Control Module (ECM)

The ECM receives control decisions based on messages from the BCM as well as the HPCM2

Instrument Panel Cluster

The instrument panel cluster provides a means of customer notification in case of a failure and a voltmeter. There are 2 means of notification, a charge indicator and a driver information center message of SERVICE BATTERY CHARGING SYSTEM.

Hybrid/EV Powertrain Control Module 2 (HPCM2)

The Hybrid/EV Powertrain control module (HPCM2) is a GMLAN device. It communicates with the engine control module (ECM) to control the voltage set point sent to the 14V Power Module during the battery maintenance mode.

Battery Sulfation Mode

Battery sulfation mode is used to help maintain the battery life. The charging system will enter a battery sulfation mode which tries to increase the vehicle charging when the charging system voltage is less than 13.2 V for about 30 minutes. Once in this mode, the BCM will set a targeted output voltage between 13.9–15.5 V for about 5 minutes. Following this 5 minutes, the BCM will then determine which mode to enter depending on the system voltage requirements.

Normal Mode

The BCM will enter Normal Mode whenever one of the following conditions are met.

- The wipers are ON for more than 3 seconds.
- GMLAN Climate Control Voltage Boost Mode Request is true, as sensed by the HVAC control head. High speed cooling fan, rear defogger and HVAC high speed blower operation can cause the BCM to enter the Charge Mode.
- The estimated battery temperature is less than 0°C (32°F).
- Vehicle Speed is greater than 145 km/h (90 mph)
- Current Sensor Fault Exists
- System Voltage was determined to be below 12.56 V
- Tow/Haul Mode is enabled

When any one of these conditions is met, the system will set targeted generator output voltage to a charging voltage between 13.9–15.5 V, depending on the battery state of charge and estimated battery temperature.

Fuel Economy Mode

The BCM will enter Fuel Economy Mode when the ambient air temperature is at least 0°C (32°F) but less than or equal to 80°C (176°F), the calculated battery current is greater than −8 A but less than 5 A, and the battery state of charge is greater than or equal to 85 percent. Its targeted 14V Power Module set-point voltage is the open circuit voltage of the battery and can be between 12.6–13.2 V. The BCM will exit this mode and enter Normal Mode when any of the conditions described above are present.

Headlamp Mode

The BCM will enter Headlamp Mode whenever the high or low beam headlamps are ON. Voltage will be regulated between 13.9–14.5 V.

Voltage Reduction Mode

The BCM will enter Voltage Reduction Mode when the calculated battery temperature is above 0°C (32°F) and the calculated battery current is greater than −7 A but less than 1 A. Its targeted 14V Power Module set-point voltage is 12.9–13.2 V. The BCM will exit this mode once the criteria are met for Normal Mode.

Battery Maintenance Mode

That battery maintenance mode is designed to ensure the 12V battery has a good state of charge.
It accomplishes this by checking the voltage of the 12V battery and providing a charge if needed.

When the vehicle cord is plugged in

- The Hybrid/EV Powertrain control module (HPCM2) will check the 12V battery every 6 hours if the ignition is off. If the voltage is below a temperature dependent threshold ranging from 12.1 (cold) to 12.4 (warm)V, the Hybrid/EV Powertrain control module (HPCM2) will send the voltage set point to the engine control module (ECM). The engine control module (ECM) will send this to the 14V Power Module. Battery maintenance mode will charge the battery for 2-3 hours. If the Ignition is ON, the APM will cycle on as needed to maintain the 12V SOC.

When the vehicle cord is not plugged in

- The Hybrid/EV Powertrain control module (HPCM2) will check the 12V battery every 4 days (2.5 to 3 days) and if the voltage is below a threshold of 12.0 may activate battery maintenance. If the high voltage battery state of charge is greater than 40% and the propulsion system is not active, Hybrid/EV Powertrain control module (HPCM2) will send the voltage set point to the engine control module (ECM). The engine control module (ECM) will send this to the 14V Power Module. Battery maintenance mode will charge the battery for 45-90 minutes..

Plant Assembly Mode

The BCM will increase charging voltage for the first 500 miles of operation in an effort to ensure that the 12 V battery is fully charged when the vehicle is delivered to the customer.

Electrical Power Management Overview

The electrical power management system is designed to monitor and control the charging system and send diagnostic messages to alert the driver of possible problems. This electrical power management system primarily utilizes existing on-board computer capability to maximize the effectiveness of the charging system, manage the load, improve battery state of charge and life, and minimize the system's impact on fuel economy. The electrical power management system performs 3 functions:

- It monitors the battery voltage and estimates the battery condition.
- It takes corrective actions by adjusting the regulated voltage.
- It performs diagnostics and driver notification.

The battery condition is estimated during Vehicle OFF and during Vehicle in Service Mode. During Vehicle OFF the state of charge of the battery is determined by measuring the open-circuit voltage. The state of charge is a function of the acid concentration and the internal resistance of the battery, and is estimated by reading the battery open circuit voltage when the battery has been at rest for several hours.

The state of charge can be used as a diagnostic tool to tell the customer or the dealer the condition of the battery. During Vehicle ON mode, the algorithm continuously estimates state of charge based on adjusted net amp hours, battery capacity, initial state of charge, and temperature.

While running, the battery degree of discharge is primarily determined by a battery current sensor, which is integrated to obtain net amp hours.

In addition, the electrical power management function is designed to perform regulated voltage control to improve battery state of charge, battery life, and fuel economy. This is accomplished by using knowledge of the battery state of charge and temperature to set the charging voltage to an optimum battery voltage level for recharging without detriment to battery life.

Instrument Panel Cluster Operation

Charge Indicator Operation

The instrument panel cluster illuminates the charge indicator and displays a charging system warning message in the driver information center when the one or more of the following occurs:

- The engine control module (ECM) detects system voltage less than 11 V or greater than 16 V. The instrument panel cluster receives a GMLAN message from the ECM requesting illumination.
- The BCM determines that the system voltage is less than 11 V or greater than 16 V.
- The instrument panel cluster receives a GMLAN message from the BCM indicating there is a system voltage range concern.
- The instrument panel cluster performs the displays test at the start of each Vehicle ON cycle. The indicator illuminates for approximately 3 seconds.
- Vehicle ON, with the engine OFF.

Battery Voltage Gauge Operation

The instrument panel cluster displays the system voltage as received from the BCM over the GMLAN serial data circuit. If there is no communication with the BCM then the gauge will indicate minimum.

This vehicle is equipped with a regulated voltage control system. This will cause the voltmeter to fluctuate between 12–14 V, as opposed to non-regulated systems which usually maintain a more consistent reading of 14 V. This fluctuation with the regulated voltage control system is normal system operation and NO repairs should be attempted.

SERVICE BATTERY CHARGING SYSTEM

The BCM and the ECM will send a GMLAN message to the driver information center for the SERVICE BATTERY CHARGING SYSTEM message to be displayed. It is displayed whenever the charge indicator is commanded ON due to a failure.

Electrical Power Management Description and Operation

Electrical Power Management

The electrical power management is used to monitor and control the charging system and alert the driver of possible problems within the charging system. The electrical power management system makes the most efficient use of the Battery output and helps extend the 12 V battery life, by managing electrical system loads.

The load shed operation is a means of reducing electrical loads during a low voltage or low battery state-of-charge condition.

The load shed operation is a means of reducing electrical loads during a low voltage or low battery state-of-charge condition to preserve the battery.

Load shed, is activated in incremental steps. The criteria used by the K9 Body Control Module (BCM) to regulate electrical power management are outlined below:

Note: Load Shed levels will be easier to enter at lower State Of Charge (SOC)

Load Shed Modes with SOC >70%

Function	Calculation	Action Taken
Load Shed 1 Start	Battery has a net loss of 4 Ah to 11 Ah	Rear Defrost, Heated Mirrors, Heated Seats, HVAC cycled OFF for 20% of their cycle
Load Shed 1 End	Battery has a net loss of less than 2 Ah	Clear Load Shed 1
Load Shed 2 Start	Battery has a net loss greater than 12 Ah	Rear Defrost, Heated Mirrors, Heated Seats, HVAC cycled OFF for 50% of their cycle. The BATTERY SAVER ACTIVE message will be displayed on the DIC
Load Shed 2 End	Battery has a net loss of less than 8 Ah	Clear Load Shed 2
Load Shed 3 Start	Battery has a net loss greater than 20 Ah or voltage < 11.9V	Rear Defrost, Heated Mirrors, Heated Seats, HVAC cycled OFF for 100% of their cycle. The BATTERY SAVER ACTIVE message will be displayed on the DIC
Load Shed 3 End	Battery has a net loss of less than 13 Ah	Clear Load Shed 3

Battery Saver Active Message

Load Shed is controlled by the Body Control Module and will go active if the vehicle begins discharging the 12 V battery past Ah thresholds. The lower State of Charge, the easier it will be to enter Load Shed.

The following conditions may cause the State of Charge to drop low:

- Fuel Economy Mode will drain the battery purposely during drive cycles and decrease the State of Charge (SOC). The vehicle is plugged in everyday to charges the HV battery and 12V battery. If the BCM hasn't been allowed to sit for a minimum of 8.5 hrs to sense the battery's voltage and update the SOC, The BCM will not update to reflect the new SOC. The BCM will continue to use the existing SOC which will continue to decrease everyday making it easier to enter Load Shed, even though the battery is charged every day when the vehicle is plugged in.
- A Parasitic draw on the vehicle causing the battery to drop below 50%, will allow for easy entry to Load Shed when Fuel Economy Mode goes active
- If the 12 V Battery is disconnected and reconnected it will cause the BCM to use a 65% default SOC. After 4 Ignitions the BCM will exit the default SOC behavior and begin integration the SOC from that point. If the vehicle was not allowed to sit over 8.5 hours without being disturbed or woke up to reset the monitored State of Charge in the BCM, the SOC will not be updated to reflect new value.
- APM failure and the battery is used to run the electrical loads. The 12 V battery will continue to discharge until a stall event occurs. Load Shed will go active to try and preserve the battery to allow the customer to reach their destination.
- Allow vehicle to sit for 8.5 hours or greater without being interrupted to allow the BCM to relearn the actual State of Charge of the battery.

The following items may interrupt the sleep mode:

- Plug in charging events.
- Battery Maintenance Mode.
- Approach Detection is activated.
- The Key Fob is left in the car or left in close proximity of the vehicle (Fob is detected).
- Pressing buttons on the keyless entry transmitter.
- Attempting to open the doors or hatch (Vehicle Locked or Unlocked).
- Any features that wakes up the BCM in OFF Mode.

Customer information

To help reduce the occurrence of this issue, inform the customer to allow the vehicle to sit uninterrupted for a minimum of 8.5 hours on a weekly basis.

Also inform the customer, if the Body Control Module detects the 12 V Battery has a low State of Charge review the following:

- If the State of Charge is not low and no battery issues are found, this is a false monitored State of Charge since it has not been refreshed, allow the vehicle to sit over 8.5 hours without being woke up.
- If the State of Charge is low, charge and test the Battery, verify no abnormal parasitic draws, and allow the vehicle to sit over 8.5 hours without being disturbed or woke up.
- If the 12 V battery is disconnected and reconnected for any reason, the BCM will default the State of Charge value to 65%, the message will go away, but it can reappear if Fuel Economy mode goes active again and continue to drain the battery, allow the vehicle to sit over 8.5 hours without being woke up.

Diagnostic Information and Procedures

Handling of Refrigerant Lines and Fittings

Caution: To avoid system damage use only R-1234yf and R-134a dedicated tools when servicing the A/C system.

- Keep all metal tubing lines free of dents or kinks. Any line restrictions will cause the loss of system capacity.
- Never bend a flexible hose line to a radius of less than four times the diameter of the hose.
- Never allow a flexible hose line to come within 65 mm (2–1/2 in) of the exhaust manifold.
- Inspect flexible hose lines regularly for leaks or brittleness.
- Replace flexible hose lines with new lines if you find signs of deterioration or leaking.
- Discharge the refrigeration system of all refrigerant before disconnecting any fitting in the refrigeration system.
- Proceed very cautiously regardless of the gauge readings.

Warning: For personal protection, goggles and lint-free gloves must be worn and a clean cloth wrapped around fittings, valves, and connections when doing work that includes opening the refrigerant system. If refrigerant comes in contact with any part of the body severe frostbite and personal injury can result. The exposed area should be flushed immediately with cold water and prompt medical help should be obtained.

- Open the fittings very slowly.
- If you notice pressure when you loosen a fitting, allow the pressure to bleed off as described Discharging, Adding Oil, Evacuating, and Charging Procedures for A/C System .
- Cap or tape any refrigerant line immediately after it is opened. This will prevent the entrance of moisture and dirt, which can cause internal compressor wear or plugged lines in the condenser, the evaporator core, the expansion valve, or the compressor inlet screens.

Note: Use two proper wrenches to connect the fittings.

- Back up the opposing fitting to prevent distortion of the connecting lines or the components.
- Keep the sealing surfaces in perfect condition. A burr or a piece of dirt may cause a refrigerant leak.

Caution: New Air Conditioning sealing washers should never be exposed to any type of oil or lubricant, the rubber material may absorb the oil causing failures during installation or the life of the vehicle.

- When seal washers are used, always install the seal washer without lubrication.

Leak Testing

Special Tools

- *GE-42220* Universal 12V Leak Detection Lamp
- *GE-43872* Fluorescent Dye Cleaner
- *GE-50078* Electronic Leak Detector
- *GE-50745* R-1234yf POE Oil Injection Hose

Equivalent regional tools: *Special Tools on page 5-138*

Refrigerant Leak Testing

Technicians repairing or servicing motor vehicle air conditioning (MVAC) systems must be trained and certified by an Environmental Protection Agency (EPA) approved organization. Certification is obtained by passing an EPA approved examination. (http://www.epa.gov/ozone/title6/609/technicians/609certs.html)

Warning: Technicians must only use a SAE J2913 certified electronic leak detector when checking for leaks in an R-1234yf A/C refrigerant system. Other, non–certified, leak detection devices could serve as ignition sources in the presence of hydrocarbons or other flammable refrigerants. Failure to follow these precautions may cause personal injury and/or damage to the vehicle or its components.

Warning: R1234-yf is considered a mildly flammable refrigerant and proper refrigerant leak testing should be completed to ensure safe and proper operation. Failure to follow these precautions may cause personal injury and/or damage to the vehicle or its components.

Caution: Leak detection shall only be done with the refrigerant that is specified for the system. Do not attempt to increase pressure of the A/C refrigerant system with shop air or another type of refrigerant. Failure to follow the above guidelines could result in damage to the vehicle or its components.

Note: General Motors vehicles are manufactured with fluorescent dye installed in the Air Conditioning (A/C) refrigerant system.

The fluorescent dye mixes and flows with the A/C compressor oil throughout the refrigerant system.

Note: The only time adding additional fluorescent dye is required is after flushing the A/C system.

Verifying some passive leaks may require using *GE-50078* Electronic Leak Detector or a SAE J2913 certified electronic leak detector, even though the refrigerant system contains fluorescent dye.

Fluorescent Leak Detection

Fluorescent dye will assist in locating any leaks in the A/C system.

- Condensation on the evaporator core or the refrigerant lines may wash the compressor oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the Heating Ventilation and Air Conditioning (HVAC) module drain.
- Leaks in the A/C system will be indicated in a light green or yellow color when using the leak detection lamp.

  Use the leak detection lamp in the following areas:
  - All fittings or connections that use seal washers or O-rings
  - All of the A/C components
  - The A/C compressor shaft seal
  - The A/C hoses and pressure switches
  - The HVAC module drain tube, if the evaporator core is suspected of leaking
  - The service port sealing caps
  - The sealing cap is the primary seal for the service ports
- Follow the instructions supplied with *GE-42220* Universal 12V Leak Detection Lamp.
- To prevent false diagnosis in the future, thoroughly clean the residual dye from any area where leaks were found. Use a rag and the approved *GE-43872* Fluorescent Dye Cleaner.

Fluorescent Dye Addition

Note: The only time adding additional fluorescent dye is required is after flushing the A/C system.

Note: The air conditioning refrigerant desiccant is manufactured with a POE fluorescent leak detection dye wafer inside.

- To add fluorescent dye, replace the air conditioning receiver and dehydrator. *Air Conditioning Receiver and Dehydrator Replacement on page 5-46*

Electronic Leak Detector – SAE J2913 Certified

Ensure that the vehicle has at least 15 percent of the specified refrigerant charge in the A/C refrigeration system in order to perform a leak test. Refer to *Refrigerant Recovery and Recharging on page 5-18*.

Note: Follow a continuous path in order to ensure that you will not miss any possible leaks. Test all areas of the system for leaks.

Follow the manufacturer instructions supplied with *GE-50078* Electronic Leak Detector or a SAE J2913 certified electronic leak detector.

Air Conditioning (A/C) System Performance Test

This test measures the operating efficiency of the A/C system under the following conditions:

- The current ambient air temperature
- The current relative humidity
- The high side pressure of the A/C system
- The low side pressure of the A/C system
- The temperature of the air being discharged into the passenger compartment

Test Description

The numbers below refer to the step numbers on the diagnostic table.

1. This step determines if the A/C system has at least the minimum refrigerant charge required to operate the system without damage.
2. This step measures the performance of the A/C system.
3. This step is to allow for vehicle variations as well as high ambient temperatures.

Air Conditioning (A/C) System Performance Test

Step	Action	Values	Yes	No
Note: • The ambient air temperature must be at least 16°C (60°F) . • Do not induce additional air flow across the front of the vehicle during the test. • If you were sent here from a DTC diagnostic table, clear the DTC upon completion of this test.				
1	1. Park the vehicle inside or in the shade. 2. Open the windows in order to ventilate the interior of the vehicle. 3. If the A/C system was operating, allow the A/C system to equalize for about 2 minutes. 4. Turn OFF the ignition. 5. Install the *GE–50300–A* R-1234yf Air Conditioning Refrigerant Recovery/Recharge Cart. 6. Record the ambient air temperature and humidity. 7. Record the low and high side STATIC pressure readings. Are both the low side and high side pressures within the specified value?	More than 16°C (60°F) – 345 kPa (50 psi) More than 24°C (75°F) – 483 kPa (70 psi) More than 33°C (90°F) – 690 kPa (100 psi)	Go to *Step 2*	Go to *Leak Testing on page 5-6*

Air Conditioning (A/C) System Performance Test (cont'd)

Step	Action	Values	Yes	No
2	**Note:** Record the relative humidity and the ambient air temperature at the time of the test. 1. Close the vehicle doors and windows. 2. Open the drivers door window 12.7–15.2 cm (5–6 in). 3. Select the following HVAC control settings: • The A/C is ON. • The coldest temperature setting • The maximum blower speed • Recirculation mode • The instrument panel (I/P) outlet mode • All I/P outlets are OPEN. 4. Install thermometers in the left and right center panel air outlets. 5. Apply the parking brake. 6. Place the transaxle/transmission in one of the following positions: • PARK (Automatic) • NEUTRAL (Manual) 7. Turn vehicle On 8. Operate the A/C system for 5 minutes. 9. Inspect A/C components for the following conditions: • Abnormal frost areas • Unusual noises 10. Record the following information: • The panel outlet air temperatures • The low-side pressure • The high-side pressure 11. Compare the low and high side pressures and the panel output temperatures to the A/C Performance Table below. Does all the data recorded fall within the specified ranges of the A/C Performance Table below?	—	Go to *Step 5*	Go to *Step 3*
3	If the pressures and temperatures recorded do not fall within the specified ranges: 1. Continue to operate the A/C system for an additional 5 minutes. 2. Record the pressures and temperatures again. 3. Compare the low and high side pressures and the panel output temperature to the A/C Performance Table below. Does all the data recorded fall within the specified ranges of the A/C Performance Table below?	—	Go to *Step 5*	Go to *Step 4*
4	Perform the necessary repairs. Refer to *A/C Diagnostics Chart on page 5-9*. Is the action complete?	—	Go to *Step 5*	—
5	Operate the system in order to verify the test results. Did you find the same results?	—	System OK	Go to Symptoms - HVAC Systems - Automatic

A/C Performance Table

Ambient Temperature	Relative Humidity	Low Side Service Port Pressure	High Side Service Port Pressure	Maximum Left Center Discharge Air Temperature
13–18°C (55–65°F)	0–100%	151–227 kPa (22–33 psi)	1191–1467 kPa (173–213 psi)	7°C (43°F)
19–24°C (66–75°F)	Less than 40%	151–213 kPa (22–31 psi)	1419–1743 kPa (206–253 psi)	5°C (41°F)
	Greater than 40%	158–241 kPa (23–35 psi)	1398–1750 kPa (203–254 psi)	8°C (46°F)
25–29°C (76–85°F)	Less than 35%	158–220 kPa (23–32 psi)	1646–1942 kPa (239–282 psi)	8°C (45°F)
	35–50%	172–227 kPa (25–33 psi)	1646–1956 kPa (239–284 psi)	8°C (46°F)
	Greater than 50%	179–241 kPa (26–35 psi)	1660–1977 kPa (241–287 psi)	10°C (50°F)
30–35°C (86–95°F)	Less than 30%	172–234 kPa (25–34 psi)	1839–2177 kPa (267–316 psi)	9°C (48°F)
	30–50%	179–234 kPa (26–34 psi)	1860–2218 kPa (270–322 psi)	10°C (50°F)
	Greater than 50%	186–241 kPa (27–35 psi)	1880-2266 kPa (273–329 psi)	13°C (54°F)
36–41°C (96–105°F)	Less than 20%	186–248 kPa (27–36 psi)	2067–2397 kPa (300–348 psi)	12°C (52°F)
	20–40%	186–241 kPa (27–35 psi)	2080–2452 kPa (302–356 psi)	13°C (54°F)
	Greater than 40%	192–241 kPa (28–35 psi)	2122–2501 kPa (308–363 psi)	13°C (55°F)
42–46°C (106–115°F)	Less than 20%	206–261 kPa (30–38 psi)	2301–2597 kPa (334–377 psi)	13°C (55°F)
	Greater than 20%	206–254 kPa (30–37 psi)	2321–2659 kPa (337–386 psi)	14°C (57°F)
47–49°C (116–120°F)	Below 30%	220–268 kPa (32–39 psi)	2521–2831 kPa (366–411 psi)	17°C (61°F)

A/C Diagnostics Chart

A/C System Concern		Potential Causes
Compressor Inoperative		Electrical Wiring Issue
		No or Low Refrigerant Charge (Greater than – 70 g /- 0.154 lbs)
		Compressor Internal Malfunction
		Compressor Clutch Malfunction
		A/C Pressure Sensor Malfunction
		Evaporator Air Temperature (EAT) Malfunction
		HVAC Controls Malfunction
Low Side Gauge Reading	**High Side Gauge Reading**	**Potential Causes**
Same as High Side	Same as Low Side	No or Low Refrigerant Charge (Greater than – 70 g /- 0.154 lbs)
		Compressor Malfunction
		A/C Pressure Sensor Malfunction
		EAT Malfunction
		HVAC Controls Malfunction

A/C Diagnostics Chart (cont'd)

A/C System Concern		Potential Causes
Normal	Normal	Temperature Actuator Malfunction
		Temperature Door Malfunction
Low	Low	Low Refrigerant Charge (Greater than – 70 g /- 0.154 lbs)
		Restriction between the Compressor Outlet and Low Side Port
	Low/Normal	Evaporator Freezing/EAT Malfunction
	High	Compressor Stuck at Maximum Displacement/EAT Malfunction
Normal/High	Normal/High	PAG or POE Oil Overcharge
High	Low	Restriction between the Low Side Port and Compressor Inlet
		Expansion Device Stuck Open
		Compressor has Low Displacement or Internal Malfunction
	High	Malfunctioning Cooling Fans
		Refrigerant Overcharge (Greater than + 30 g / 0.066 lbs)
		Restricted Condenser Air Flow
		Air in A/C System

Note: Restrictions can occur in any part of an A/C system and may result in various gauge pressure values, depending on the system design and service port locations. The use of a non-contact, infrared thermometer can help diagnose a restricted A/C system with the ability to quickly observe significant, unexpected temperature changes in components and plumbing due to debris, contamination, pinched/damaged hoses, etc.

Note: This vehicle has a refrigerant charge operational tolerance of -70g to +30g. If the refrigerant charge falls outside of this range, please refer to Air Conditioning (A/C) System Performance Test.

Heating Performance Diagnostic

Step	Action	Yes	No
DEFINITION: Heating system performance.			
1	Were you sent here from Symptoms or another diagnostic table?	Go to *Step 2*	Go to Symptoms - HVAC Systems - Automatic
2	1. Turn ignition to on. 2. Select vent mode. 3. Select the warmest temperature setting. 4. Select Maximum blower speed. 5. Feel the temperature of the heater core inlet hose. Does the heater core inlet hose feel warm to hot?	Go to *Step 3*	Go to *Step 9*
3	1. Select the minimum blower speed. 2. Feel the temperature of the heater core inlet and outlet hoses. Does the heater core inlet hose feel warmer than the heater core outlet hose?	Go to *Step 7*	Go to *Step 4*

Heating Performance Diagnostic (cont'd)

Step	Action	Yes	No
4	1. Install a thermometer into the center I/P panel air outlet. 2. Secure a thermometer to the heater core outlet hose. 3. Select the maximum blower speed. 4. Record the temperature at the following location. 5. Record the temperature at the following locations: • The center I/P panel air outlet • The heater core outlet hose 6. Compare the recorded temperatures. Are the two temperature readings about equal?	Go to *Step 5*	Go to *Step 6*
5	1. Inspect and repair the following areas of the vehicle for cold air leaks: • The cowl • The recirculation door • The HVAC module case 2. Perform the necessary repairs. Are the repairs complete?	Go to *Step 11*	—
6	1. Inspect the temperature door operation. 2. Perform any necessary repairs. Are the repairs complete?	Go to *Step 11*	—
7	1. Turn the ignition to off. 2. Backflush the heater core. 3. Turn the ignition to on. 4. Select the vent mode. 5. Select the minimum blower speed. 6. Select the warmest temperature setting. 7. Feel the temperature of the heater core inlet and outlet hoses. Does the heater core inlet hose feel warmer than the heater core outlet hose?	Go to *Step 8*	Go to *Step 11*
8	Replace the heater core. *Heater Core Replacement on page 5-129* Is the repair complete?	Go to *Step 11*	—
9	Inspect and repair the following areas: • Kinked hose • Heater valve inlet filter • Air in the coolant circuit • Inoperable heater valve Did you find and correct the condition?	Go to *Step 11*	Go to *Step 10*
10	Inspect the coolant heater control module. Is the repair complete?	Go to *Step 11*	—
11	Operate the system in order to verify the repair. Did you find and correct the condition?	System OK	Go to *Step 2*

Defrosting Insufficient

Step	Action	Yes	No
DEFINITION: Time required to defrost the windshield is longer than normal.			
1	Were you sent here from Symptoms or another diagnostic table?	Go to *Step 2*	Go to Symptoms - HVAC Systems - Automatic
2	1. Turn ignition to ON.. 2. Select the DEFROST mode. 3. Select the maximum blower speed. Does sufficient air flow from the defroster outlets?	Go to *Step 3*	Go to *Step 6*

Defrosting Insufficient (cont'd)

Step	Action	Yes	No
3	1. Select the minimum blower speed. 2. Select the maximum temperature setting. 3. Feel the temperature of the inlet and outlet hoses at the heater core. Does the inlet hose feel warmer than the outlet hose?	Go to *Step 7*	Go to *Step 4*
4	Perform the A/C system performance test. *Air Conditioning (A/C) System Performance Test on page 5-7* Is the A/C system operating within the specifications?	Go to *Step 5*	Go to *Step 8*
5	Inspect for correct operation of the air inlet door. Is the air inlet door operating correctly?	Go to *Step 10*	Go to *Step 9*
6	Repair the air delivery concern. Is the repair complete?	Go to *Step 10*	—
7	Repair the heating concern. *Heating Performance Diagnostic on page 5-10* Is the repair complete?	Go to *Step 10*	—
8	Repair the A/C performance concern. *Air Conditioning (A/C) System Performance Test on page 5-7* Is the repair complete?	Go to *Step 10*	—
9	Repair the air inlet door concern. *Air Inlet Housing Replacement on page 5-101* Is the repair complete?	Go to *Step 10*	—
10	Operate the system in order to verify the repair. Did you find and correct the problem?	System OK	Go to *Step 2*

Noise Diagnosis - Blower Motor

Step	Action	Yes	No
DEFINITION: Noise originating from the blower motor.			
1	Were you sent here from Symptoms or another diagnostic table?	Go to *Step 2*	Go to Symptoms - HVAC Systems - Automatic
2	Inspect the air inlet grille for debris. Is debris present?	Go to *Step 8*	Go to *Step 3*
3	1. Sit inside the vehicle. 2. Close the vehicle doors and windows. 3. Turn the ignition to the accessory position. 4. Cycle the blower motor through all of the speeds and modes in order to determine where and when the noise occurs. Is a noise evident during the blower operation?	Go to *Step 4*	Go to *Step 11*
4	Inspect for excessive vibration at each blower motor speed by feeling the blower case. Is excess vibration present?	Go to *Step 6*	Go to *Step 5*
5	Listen to the blower motor at each speed. Is the blower motor making a squeaking or chirping noise?	Go to *Step 9*	Go to *Step 11*
6	1. Remove the blower motor. Refer to *Blower Motor Replacement on page 5-103*. 2. Inspect the blower motor impeller for deposits of foreign material. 3. Inspect the blower motor for deposits of foreign material. Did you find any foreign material on the blower motor or blower motor impeller?	Go to *Step 8*	Go to *Step 7*

Noise Diagnosis - Blower Motor (cont'd)

Step	Action	Yes	No
7	Inspect the blower motor for the following conditions: • Cracked blades • A loose impeller retainer • Improper impeller alignment Did you find any of these conditions?	Go to *Step 9*	Go to *Step 10*
8	Remove the foreign material. Is the action complete?	Go to *Step 10*	—
9	Replace the blower motor. Refer to *Blower Motor Replacement on page 5-103*. Is the repair complete?	Go to *Step 11*	—
10	Install the blower motor. Refer to *Blower Motor Replacement on page 5-103*. Is the action complete?	Go to *Step 11*	—
11	Operate the system in order to verify the repair. Did you find and correct the condition?	System OK	Go to *Step 2*

Air Conditioning Compressor Oil Diagnosis

Note: To avoid repeat compressor failure, always inspect the condition of the refrigerant oil and take the appropriate corrective action before installing the replacement compressor.

Air Conditioning Compressor Oil Diagnosis

Condition	Corrective Action
Clean Oil no debris present	No corrective action necessary.
Clean Oil with debris present	• Inspect the suction port of the replacement compressor for presence of a suction screen. If the replacement compressor does NOT contain a suction screen, install suction screen in the line. • Replace desiccant or component containing the desiccant. • Replace desiccant filter if applicable. • Remove and inspect high pressure side filter (if applicable). • Remove, inspect, clean, or replace orifice tube. • If the system has a front orifice tube and is equipped with a filter in the rear auxiliary line, remove, inspect, clean, or replace the filter. • If the system has a front orifice tube and is not equipped with a filter in the rear auxiliary line, remove the filter in the auxiliary TXV and Install a universal inline A/C Filter P/N 89016656 (AC Delco P/N 15-10413) as close to the rear TXV as possible.
Dark brown/black and/or pungent/unusual odor with no debris present	• Replace desiccant or component containing the desiccant. • Replace desiccant filter if applicable. • Flush refrigerant system. Refer to *Flushing on page 5-20*.
Dark brown/black and/or pungent/unusual odor with debris present	• Replace desiccant or component containing the desiccant. • Replace desiccant filter if applicable. • Flush refrigerant system. Refer to *Flushing on page 5-20*. • Inspect the suction port of the replacement compressor for presence of a suction screen. If the replacement compressor does NOT contain a suction screen, install suction screen. • Remove and inspect high pressure side filter (if applicable). • Remove, inspect, clean, or replace orifice tube. • If the system has a front orifice tube and is equipped with a filter in the rear auxiliary line, remove, inspect, clean, or replace the filter. • If the system has a front orifice tube and is not equipped with a filter in the rear auxiliary line, remove the filter in the auxiliary TXV and install a universal inline A/C Filter P/N 89016656 (AC Delco P/N 15-10413) as close to the rear TXV as possible.
Oil Overcharge	Flush refrigerant system. Refer to *Flushing on page 5-20*.

Air Conditioning Compressor Oil Diagnosis (cont'd)

Condition	Corrective Action
Refrigerant Contamination	Flush refrigerant system. Refer to *Flushing on page 5-20*.
Hybrid Polyolester Refrigerant Oil (POE) Contamination	• Flush refrigerant system. Refer to *Flushing on page 5-20*. • Replace desiccant or component containing the desiccant. • Replace desiccant filter if applicable.

Noise Diagnosis - HVAC Module

Step	Action	Yes	No
DEFINITION: Noise originating from the HVAC module.			
1	Were you sent here from Symptoms or another diagnostic table?	Go to *Step 2*	Go to Symptoms - HVAC Systems - Automatic
2	1. Start the engine. 2. Cycle through all of the following: • Blower motor speeds • HVAC modes • Temperature control settings 3. Determine the type of noise: • Scrape, pop • Tick/click, chirp or groaning • Air rush/whistle Is a scrape or pop noise evident when selecting modes or temperature settings?	Go to *Step 6*	Go to *Step 3*
3	Is a tick/click, chirping, groaning or scraping noise present, but decreases as blower motor speed is decreased?	Go to *Step 6*	Go to *Step 4*
4	Is an air rush/whistle noise evident in all modes but not all temperature settings?	Go to *Step 6*	Go to *Step 5*
5	Is an air rush/whistle noise evident only in defrost or floor mode?	Go to *Step 6*	Go to *Step 6*
6	Remove the IP carrier. Is the action complete?	Go to *Step 7*	—
7	1. Inspect the air flow doors for proper operation. 2. Inspect the ducts for obstructions or foreign materials. Were any of these conditions found?	Go to *Step 10*	Go to *Step 8*
8	Inspect the mode and temperature doors and seals for warping or cracking. Are the doors in normal condition?	Go to *Step 11*	Go to *Step 9*
9	Replace the appropriate door and/or seals. Is the repair complete?	Go to *Step 11*	—
10	Remove any obstructions or foreign material found. Is the action complete?	Go to *Step 11*	—
11	Install the IP Assembly. Is the action complete?	Go to *Step 12*	—
12	Operate the system to verify the repair. Did you find and correct the condition?	System OK	Go to *Step 2*

Odor Diagnosis

Step	Action	Yes	No
DEFINITION: Odor originating or noticed through the HVAC system.			
1	Were you sent here from Symptoms or another diagnostic table?	Go to *Step 2*	Go to Symptoms - HVAC Systems - Automatic

Odor Diagnosis (cont'd)

Step	Action	Yes	No
2	1. Sit inside the vehicle. 2. Close all of the doors and windows. 3. Start Turn ignition to on. 4. Select the maximum blower speed. 5. Select the PANEL air outlet mode. 6. Select the coldest temperature setting. 7. Cycle through all of the blower speeds, modes and temperatures to define what type of odor is present. • Musty smell • Coolant smell • Oil smell Does the odor have a musty smell?	Go to *Step 3*	Go to *Step 8*
3	Inspect the HVAC filter and the air inlet grille for debris. Is debris present?	Go to *Step 4*	Go to *Step 5*
4	Remove any debris. Is the action complete?	Go to *Step 15*	—
5	Inspect for wet carpeting. Is the carpet wet?	Go to *Step 6*	Go to *Step 8*
6	Inspect for the following conditions: 1. Water leaks around the windshield 2. Blockage of the HVAC module drain 3. Leaks around the door seals Is a leak present?	Go to *Step 7*	Go to *Step 15*
7	Repair the leak as necessary. Is the repair complete?	Go to *Step 15*	—
8	Does the odor have a coolant smell?	Go to *Step 9*	Go to *Step 12*
9	Inspect the cooling system for leaks. *Cabin Heater Coolant Heater System Loss of Coolant on page 5-16* Is a leak present?	Go to *Step 10*	Go to *Step 12*
10	Inspect for coolant leaking inside the vehicle or for a film build-up on the windshield. Is the condition present?	Go to *Step 11*	Go to *Step 15*
11	Replace the heater core. *Heater Core Replacement on page 5-129* Is the repair complete?	Go to *Step 15*	—
12	Does the odor have an oily smell?	Go to *Step 13*	Go to *Step 15*
13	1. Inspect the engine compartment for any leaks. Refer to the following procedures: • Oil Leak Diagnosis • Fluid Leak Diagnosis 2. Repair any oil leaks. Is the repair complete?	Go to *Step 15*	—
14	A musty odor can be caused by mold or mildew build-up on the evaporator or the heater core or inside of the HVAC module. *Odor Correction on page 5-18* Is the action complete?	Go to *Step 15*	—
15	Operate the system in order to verify the repair. Did you find and correct the condition?	System OK	Go to *Step 2*

Cabin Heater Coolant Heater System Loss of Coolant

Step	Action	Yes	No
DEFINITION: The heater coolant heater cooling system is losing coolant either internally or externally.			
1	Inspect the coolant level. Is the coolant at the proper level?	Go to *Step 13*	Go to *Step 2*
2	Fill the cooling system to the proper level. *Heater Coolant Heater Draining and Filling on page 5-22* Is the action complete?	Go to *Step 3*	—
3	Overheating can cause a loss of coolant. Is the Heater Coolant Heater Cooling system overheating?	Go to *Step 11*	Go to *Step 4*
4	Visually inspect the hoses, pipes and hose clamps. Are any of the hoses, clamps or pipes leaking?	Go to *Step 12*	Go to *Step 5*
5	Visually inspect the following components: • Coolant surge tank • Coolant pressure cap • Air separator • Radiators • Coolant pumps • Coolant valves • Heater Coolant Heater Are any of the listed components leaking?	Go to *Step 12*	Go to *Step 6*
6	1. Pressure test the heater coolant heater cooling system. *Cabin Heater Coolant Heater System Leak Testing on page 5-17* 2. With the heater coolant heater cooling system pressurized, visually inspect the components listed in step 5. Are any leaks present?	Go to *Step 12*	Go to *Step 7*
7	Pressure test the coolant pressure cap. *Cabin Heater Coolant Heater System Pressure Cap Testing on page 5-16* Does the coolant pressure cap hold pressure?	Go to *Step 9*	Go to *Step 8*
8	Replace the coolant pressure cap. Is the repair complete?	Go to *Step 13*	—
9	1. Pressure test the heater coolant heater cooling system. *Cabin Heater Coolant Heater System Leak Testing on page 5-17* 2. With the cooling system pressurized, remove the heater coolant heater cooling system pressure cap. Does the heater coolant heater cooling system hold pressure?	—	Go to *Step 10*
10	Replace the surge tank. Is the repair complete?	Go to *Step 13*	—
11	Repair the heater coolant heater cooling system overheating condition. Is the repair complete?	Go to *Step 13*	—
12	Repair or replace the leaking component. Refer to the appropriate repair. Is the repair complete?	Go to *Step 13*	—
13	Operate the system in order to verify the repair. **Note:** Do not use stop leak or any other chemicals. Only use premix Dexcool (50/50 mixture of Dexcool and deionized) Did you find and correct the condition?	System OK	Go to *Step 2*

Cabin Heater Coolant Heater System Pressure Cap Testing

Special Tools

- *GE-46143* Radiator Cap and Surge Tank Test Adapter
- *EN-24460-A* Cooling System Pressure Tester

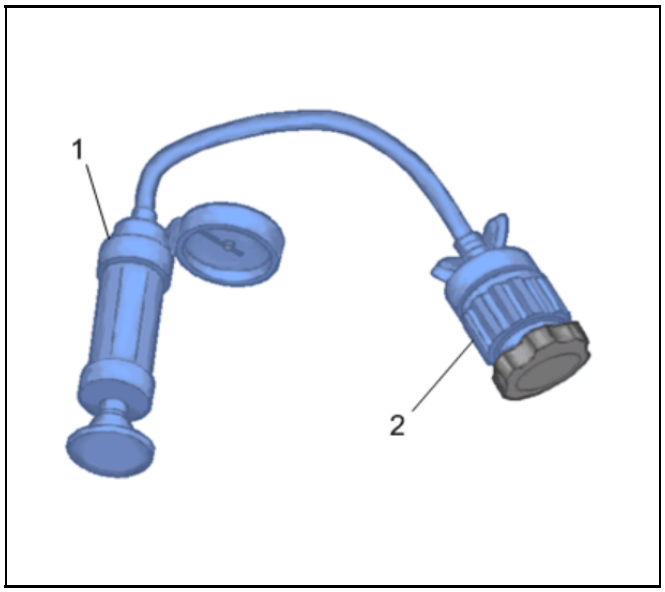
For equivalent regional tools, Refer to *Special Tools on page 5-138*.

Pressure Cap Testing

Warning: To avoid being burned, do not remove the radiator cap or surge tank cap while the engine is hot. The cooling system will release scalding fluid

and steam under pressure if radiator cap or surge tank cap is removed while the engine and radiator are still hot.

1. Remove the pressure cap.
2. Wash the pressure cap sealing surface with water.



850101

Note: Lubricate *GE-46143* Radiator Cap and Surge Tank Test Adapter and pressure cap O-rings with coolant and press cap to seat O-ring on *GE-46143* Radiator Cap and Surge Tank Test Adapter before turning to engage threads.

3. Use the *EN-24460-A* Cooling System Pressure Tester (1) with *GE-46143–1* Radiator Cap and Surge Tank Test Adapter (2) in order to test the pressure cap.
4. Test the pressure cap for the following conditions:
   - Pressure release when the *EN-24460-A* Cooling System Pressure Tester exceeds the pressure rating of the pressure cap.
   - Maintain the rated pressure for at least 10 seconds.

   Note the rate of pressure loss.
5. Replace the pressure cap under the following conditions:
   - The pressure cap does not release pressure which exceeds the rated pressure of the cap.
   - The pressure cap does not hold the rated pressure.

Cabin Heater Coolant Heater System Leak Testing

Special Tools

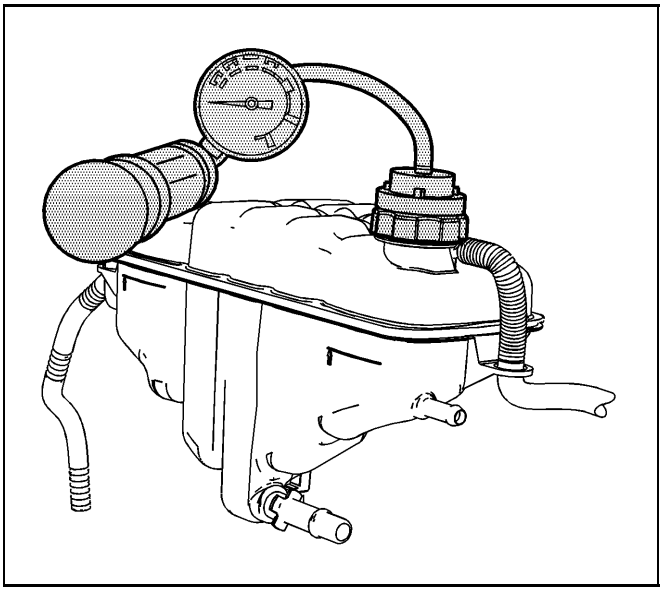
- *EN-24460-A* Cooling System Pressure Tester
- *GE-46143* Radiator Cap and Surge Tank Test Adapter

For equivalent regional tools, Refer to *Special Tools on page 5-138*.

Warning: Under pressure, the temperature of the solution in the radiator can be considerably higher, without boiling. Removing the radiator cap while the engine is hot (pressure is high), will cause the solution to boil instantaneously, with explosive force. The solution will spew out over the engine, fenders, and the person removing the cap. Serious bodily injury may result. Flammable antifreeze, such as alcohol, is not recommended for use at any time. Flammable antifreeze could cause a serious fire.

Warning: In order to help avoid being burned, do not remove the radiator cap while the engine and the radiator are hot. Scalding fluid and steam can be blown out under pressure if the cap is removed too soon.

1. Remove the pressure cap.
2. Test the operation of the pressure cap. *Cabin Heater Coolant Heater System Pressure Cap Testing on page 5-16*
3. Wash the pressure cap mating surface with water.



1992535

4. Use the *EN-24460-A* Cooling System Pressure Tester with the *GE-46143–2* Adapter in order to apply pressure to the cooling system.

   Do not exceed the pressure cap rating.
5. The cooling system should hold the rated pressure for at least 2 minutes.

   Observe the gauge for any pressure loss.

   Note: Do not use stop leak or any other chemicals. Only use premix Dexcool (50/50 mixture of Dexcool and deionized)
6. Repair any leaks as required.

Repair Instructions

Odor Correction

Eliminating Air Conditioning (A/C) Odor

Odors may be emitted from the air conditioning system primarily at start up in hot, humid climates. The following conditions may cause the odor:

- Debris is present in the HVAC module
- Microbial growth on the evaporator core

When the blower motor fan is turned on, the microbial growth may release an unpleasant musty odor into the passenger compartment. To remove odors of this type, the microbial growth must be eliminated. Perform the following procedure:

Deodorize the evaporator core using Deodorizing Aerosol Kit.

Perform the following steps in order to deodorize the A/C system:

1. Ensure that the plenum which draws outside air into the HVAC module is clear of debris.
2. Disable the air conditioning (A/C) compressor clutch operation by disconnecting the clutch coil electrical connector.
3. Dry the evaporator core by performing the following steps:
   3.1. Turn the ignition to run mode.
   3.2. Select the warmest temperature setting.
   3.3. Select the recirculation mode.
   3.4. Run the blower motor on high for 10 minutes.
4. Locate an area in the air conditioning duct between the blower motor and the evaporator core downstream of the blower motor.
5. Drill a 3.175 mm (0.125 in) hole where the hole will not interfere with or damage the following components:
   - The blower motor
   - The evaporator core
   - Any other operating part the of system
6. Wear safety goggles and latex gloves in order to perform the following actions:
   6.1. Select the maximum blower speed.
   6.2. Insert the deodorizer extension tube into the hole to the mark on the extension tube.
   6.3. Use short spray bursts and vary the direction of spray for a 2–3 minute period of time.
7. Shut the engine OFF. Allow the vehicle to sit for 3–5 minutes.
8. Seal the 3.175 mm (0.125 in) hole with body sealer or RTV gasket compound.
9. Turn the ignition to run mode.
10. Operate the blower motor on high for 15–20 minutes to dry.
11. Reconnect the A/C compressor clutch coil electrical connector.
12. Verify proper A/C clutch operation.

Refrigerant Recovery and Recharging

- *GE-50957* Machine R-1234yf Contaminated Refrigerant
- *GE-50745* R-1234yf Air Conditioning POE Oil Injector Hose

For equivalent regional tools, refer to *Special Tools on page 5-138*.

General Information

R-1234yf (HFO-1234yf) - 2,3,3,3 - Tetrafluoroprop-1-ene (CF3CFCH2), is an olefin containing hydrogen, fluorine and carbon with thermodynamic properties similar to R-134a. This refrigerant is a mildly flammable gas. It has a boiling point of −29.2°C, a vapor pressure of 583 kPa absolute at 20°C, no ozone depletion potential, and a global warming potential (GWP) of 4.

R-1234yf supply tank is white with red band to denote flammability.

Note: In certain regions, technicians repairing or servicing motor vehicle air conditioning (MVAC) systems must be trained and certified by the appropriate regional or national regulatory agency.

- In the USA, refer to the EPA website for MVAC training requirements. http://www.epa.gov/ozone/title6/609/technicians/609certs.html
- In Canada, refer to the Environment Canada website for MVAC training requirements. http://www.ec.gc.ca/ozone/default.asp?lang=En&n=943E1CAB-1#ws4E6F6835
- In Europe, refer to Commission Regulation (EC) No 307/2008 for MVAC training requirements. http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2008:092:0025:0027:EN:PDF

Vehicles equipped with R-1234yf refrigerant systems have unique low and high side service fittings.

The proper handling procedures should be followed for all refrigerants as designated by the refrigerant manufacturer’s Material Safety Data Sheet (MSDS).

Refrigerant Recovery and Recharging

To remove, recycle and install R-1234yf from/to a vehicles refrigerant system only use *GE-50300-A* R-1234yf Air Conditioning Refrigerant Recovery/Recharge Cart or refrigerant recovery recharge equipment certified to meet the requirements of SAE J2843.

To remove contaminated refrigerant from a vehicles refrigerant system use *GE-50957* Machine R-1234yf Contaminated Refrigerant or only service equipment designed for contaminated refrigerant removal and certified to meet the requirements of SAE J2851. Refrigerant recovered by this equipment cannot be

reused or recycled on site and must be sent to an approved reclamation facility for reprocessing or disposal.

To prevent accidental release of refrigerant and minimize safety concerns, the installation of any refrigerant service equipment to the vehicle shall only be done with the engine off and after the refrigerant high side pressure has been reduced (approximately 2–3 minutes).

Open the windows and/or doors before charging the vehicle to prevent an accumulation of refrigerant in case of a major refrigerant leak.

Warning: R-1234yf is heavier than air and may accumulate in low or pit areas – make sure these areas are properly ventilated. Failure to follow this precaution may cause personal injury.

Refrigerant service equipment is required to ensure adequate refrigerant recovery to reduce emissions and provide for accurate recharging of mobile air conditioning systems. Venting refrigerant to the atmosphere is illegal in the USA and EU and may have restrictions in other regions.

Warning: To prevent personal injury, avoid breathing any refrigerant vapor and lubricant mist. Servicing of R-1234yf systems shall only be done in well ventilated work areas. To remove R-1234yf refrigerant from the A/C refrigerant system, recover using SAE J2843 certified equipment. Un-controlled release of R-1234yf refrigerant in the work area may result in high concentrations of R-1234yf that can be flammable. If an accidental system discharge occurs, ventilate the work area before continuing service. Failure to follow these precautions may cause personal injury and/or damage to the vehicle or its components.

Warning: For personal protection, goggles and lint-free gloves must be worn and a clean cloth wrapped around fittings, valves, and connections when doing work that includes opening the refrigerant system. If refrigerant comes in contact with any part of the body severe frostbite and personal injury can result. The exposed area should be flushed immediately with cold water and prompt medical help should be obtained.

Warning: Evaporators in vehicles equipped with R-1234yf refrigerant systems must never be repaired or replaced with an evaporator removed from another or salvage vehicle. Use only new SAE J2842 certified and labeled evaporator(s) as replacement parts. Failure to follow this guideline could pose a health and/or safety risk to the vehicle occupant(s).

Caution: Air Conditioning (A/C) desiccant must be replaced if the A/C refrigerant system has been open to atmosphere for more than four hours, or if the A/C refrigerant oil has been contaminated. Failure to replace the A/C desiccant will result in damage to the A/C refrigerant system.

Caution: Use only the refrigerant and the charge amount specified in “Refrigerant System Specifications” found in HVAC Service Manual or the vehicles under hood refrigerant label. Use of incorrect refrigerant or charge amounts may result in poor system performance and premature system failure.

Caution: Use only the lubricant specified for this vehicles refrigerant system. Do not mix refrigerant oils which may result in system contamination and unknown reaction by-products which may cause HVAC System failure.

To protect the refrigerant supply *GE-50300-A* R-1234yf Air Conditioning Refrigerant Recovery/Recharge Cart or SAE J2843 equipment requires the refrigerant to be analyzed for purity prior to its recovery or transfer. The equipment is required to receive an acceptable reading from the integrated refrigerant identifier prior to recovery or transfer.

If an unacceptable reading is received (and the presence of foreign gases detected) the refrigerant is considered contaminated and the equipment will not allow its recovery or transfer to an onboard storage vessel. If refrigerant is contaminated use *GE-50957* Machine R-1234yf Contaminated Refrigerant or SAE J2851 compliant equipment to recover for reclamation and/or disposal at an EPA approved facility (http://www.epa.gov/ozone/title6/608/reclamation/reclist.html) or regional approved facility.

As a safety precaution *GE-50300-A* R-1234yf Air Conditioning Refrigerant Recovery/Recharge Cart or SAE J2843 compliant equipment requires the MAC system to pass a pre-charge leak test (to detect the possibility of a gross system leak prior to charging, >0.3 g/s) prior to allowing the MAC system to be charged. The pressurized portion of this test will require the technician set the vehicles HVAC blower motor on high, A/C switch off and air distribution mode set to floor. The technician shall insert a *GE-50078* Electronic Leak Detector or J2913-compliant electronic leak detector, set to low sensitivity (14 grams/year leak rate) into the center of a floor duct outlet, as far as possible. When the technician confirms that the vehicle is set up for the pressurized leak check the *GE-50300-A* R-1234yf Air Conditioning Refrigerant Recovery/Recharge Cart will install 15% of the programmed charge into the vehicles refrigerant system. The technician monitors the electronic leak detector for 5 minutes or until the detector alarms.

The equipments display will then ask the following:

1. Was this test performed? If the technician replies Yes, the display next shall ask,
2. Was a leak found? If technician replies Yes, the machine shall only allow recovery and evacuation to allow repair. If the technician replies No, the display shall continue with,
3. Is there an auxiliary evaporator? If the technician replies No the machine shall permit completion of the recharge process. If the technician replies Yes, the display shall instruct the technician to perform a leak check with *GE-50078* Electronic Leak Detector or a J2913-compliant detector at a rear evaporator outlet, then ask,
4. Was an auxiliary evaporator leak check performed? If the technician replies Yes, the display will continue with Was a leak found? and if the answer is Yes, the machine shall only allow

recovery and evacuation to allow repair. If the technician replies No, the machine shall permit completion of the recharge process.

A/C Refrigerant System Oil Charge Replenishing

If oil was removed from the A/C system during the recovery process or due to component replacement, the oil must be replenished. Oil can be injected into a charged system using *GE-45037* injector with *GE-50745* R-1234yf Air Conditioning POE Oil Injector Hose. For the proper quantities of oil to add to the A/C refrigerant system, refer to *Approximate Fluid Capacities on page 5-4*.

Flushing

Special Tools

- *GE-50300* Air Conditioning Service Center for HFO1234yf

Equivalent regional tools.*Special Tools on page 5-138*.

General Information

R-1234yf (HFO-1234yf) - 2,3,3,3 - Tetrafluoroprop-1-ene (CF3CFCH2), is an olefin containing hydrogen, fluorine and carbon with thermodynamic properties similar to R-134a. This refrigerant is a mildly flammable gas. It has a boiling point of −29.2°C, a vapor pressure of 583 kPa absolute at 20°C, no ozone depletion potential, and a global warming potential (GWP) of 4.

Technicians repairing or servicing motor vehicle air conditioning (MVAC) must be trained and certified by an EPA approved organization. Certification is obtained by passing an EPA approved examination. (http://www.epa.gov/ozone/title6/609/technicians/609certs.html)

Note:

- The high voltage (HV) electric air conditioning (A/C) compressor uses a polyolester (POE) refrigerant oil instead of a polyalkylene glycol (PAG) synthetic refrigerant oil. This is due to the better electrical resistance of the POE oil and its ability to provide HV isolation.
- When servicing vehicles with an electric compressor, first perform the hose flush procedure to clear the unit of residual air conditioning system oil. Failure to perform this procedure will cause contamination of the hybrid system as well as failure of the compressor. The hose flush procedure is found in the GE-50300 Instruction Manual.
- Failure to flush the GE-50300 hoses before adding refrigerant to a vehicle with an electric air conditioning compressor may result in an unacceptable amount of air conditioning oil entering the refrigerant system. It may also cause a battery energy control module hybrid battery voltage system isolation lost diagnostic trouble code (DTC P1AE7) to be set.

Flush Procedure

Note: Flushing is not intended to remove metal from the air conditioning system.

Flushing is intended to remove the following:

- Contaminated Air Conditioning Compressor oil
- Desiccant, following a desiccant bag failure
- Overcharge of Air Conditioning Compressor oil
- Refrigerant contamination

Note: Warmer engine or ambient temperatures decreases the refrigerant recovery time during the air conditioning flush procedure.

1. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*
2. Remove the air conditioning condenser. *Air Conditioning Condenser Replacement on page 5-51*
3. Remove the air conditioning receiver and dehydrator. *Air Conditioning Receiver and Dehydrator Replacement on page 5-46*
4. Install the air conditioning receiver and dehydrator plug without the air conditioning refrigerant desiccant. *Air Conditioning Receiver and Dehydrator Replacement on page 5-46*
5. Install the air conditioning condenser. *Air Conditioning Condenser Replacement on page 5-51*
6. Remove the air conditioning evaporator thermal expansion valve. *Air Conditioning Evaporator Thermal Expansion Valve Replacement on page 5-49*
7. Remove the air conditioning evaporator thermal expansion valve stud from the air conditioning evaporator thermal expansion valve.
8. Install the air conditioning evaporator thermal expansion valve stud onto the GE-45268-115 adapter.
9. Install GE-45268-115 in place of the air conditioning evaporator thermal expansion valve.
10. Remove the drive motor battery coolant cooler thermal expansion valve.
11. Remove the drive motor battery coolant cooler thermal expansion valve stud from the drive motor battery coolant cooler thermal expansion valve.
12. Install the drive motor battery coolant cooler thermal expansion valve stud onto the GE-45268-115 adapter.
13. Install GE-45268-115 in place of the drive motor battery coolant cooler thermal expansion valve.
14. Remove the air conditioning and drive motor battery cooling compressor. *Air Conditioning and Drive Motor Battery Cooling Compressor Replacement on page 5-28*
15. If equipped, remove the screen in the end of the air conditioning condenser hose.
16. Install GE-45268-4 to the air conditioning compressor hose.
17. Install GE-45268-5 to the air conditioning condenser hose.

18. Forward flow refrigerant flushing is recommended for contaminated refrigerant or POE oil.

    Note: The filter inside GE-45268-1 is serviceable. Remove and discard the check valve from the filter.

    18.1. Service the filter before each flush.

    18.2. Connect the GE-45268-1 flush filter to the suction port of the GE-45268-4 flush adapter.

    18.3. Connect the blue hose from the GE-50300 Air Conditioning Service Center to the J 45268-1 flush filter adapter.

    18.4. Connect the red hose from the GE-50300 Air Conditioning Service Center to the GE-45268-5 flush adapter.

19. Reverse flow refrigerant flushing is recommended for desiccant cartridge failure.

    Note: The filter inside GE-45268-1 is serviceable. Remove and discard the check valve from the filter.

    19.1. Service the filter before each flush.

    19.2. Connect the J 45268-1 flush filter to the discharge port of the GE-45268-5 flush adapter.

    19.3. Connect the blue hose from the GE-50300 Air Conditioning Service Center to the J 45268-1 flush filter adapter.

    19.4. Connect the red hose from the GE-50300 Air Conditioning Service Center to the suction port of the GE-45268-4 flush adapter.

20. Install the GE-45268-10 to the air conditioning compressor to condenser hose assembly.
21. Install fitting GE-45268-128 to the filter cylinder end of GE-45268-1.
22. Connect GE-45268-1 filter to GE-45268-7 adapter.

    Note: Close the valve on the external refrigerant tank, before starting the flush process.

23. Flush the air conditioning system. Follow the instructions supplied with the *GE-50300* Air Conditioning Service Center.
24. Remove the GE-45268-4 from the air conditioning compressor hose.
25. Remove the GE-45268-5 from the air conditioning condenser hose.

    Note: Flushing will remove all the POE oil from the air conditioning system.

    The air conditioning system must be replenished with the correct amount of POE oil.

26. If you will reinstall the removed air conditioning and drive motor battery cooling compressor, perform the following procedure:

    26.1. Remove the air conditioning and drive motor battery cooling compressor drain plug.

    26.2. Install the air conditioning and drive motor battery cooling compressor drain plug and tighten to **30 N•m (22 lb ft)**.

    26.3. Add the total system capacity of POE oil to the air conditioning and drive motor battery cooling compressor. *Approximate Fluid Capacities on page 5-4*

27. If you are replacing the air conditioning and drive motor battery cooling compressor after flushing the system, perform the following procedure:

    27.1. Do not drain the POE oil from the air conditioning and drive motor battery cooling compressor.

    27.2. Deduct the amount of POE oil shipped with the air conditioning and drive motor battery cooling compressor from the amount of POE oil listed in the approximate fluid capacities table. *Approximate Fluid Capacities on page 5-4*

    27.3. Add the calculated amount to the compressor, as needed.

    Note: Flushing will remove fluorescent leak detection dye from air conditioning system.

28. Remove the air conditioning condenser. *Air Conditioning Condenser Replacement on page 5-51*

    Note: The air conditioning refrigerant desiccant is manufactured with a POE fluorescent leak detection dye wafer inside.

29. Replace the air conditioning receiver and dehydrator. *Air Conditioning Receiver and Dehydrator Replacement on page 5-46*
30. Install the air conditioning condenser. *Air Conditioning Condenser Replacement on page 5-51*
31. Remove the GE-45268-115 in place of the air conditioning evaporator thermal expansion valve.
32. Remove the GE-45268-115 in place of the drive motor battery coolant cooler thermal expansion valve.
33. Inspect the air conditioning evaporator thermal expansion valve for debris. Clean or replace as needed. *Air Conditioning Evaporator Thermal Expansion Valve Replacement on page 5-49*
34. Inspect the drive motor battery coolant cooler thermal expansion valve for debris. Clean or replace as needed.
35. If equipped, Clean and install the screen in the end of the air conditioning condenser hose.
36. Install the air conditioning and drive motor battery cooling compressor . *Air Conditioning and Drive Motor Battery Cooling Compressor Replacement on page 5-28*
37. Evacuate and recharge the air conditioning system. *Refrigerant Recovery and Recharging on page 5-18*
38. Leak test the fittings using *GE-50078* Enhanced Leak Detector.

Heater Coolant Heater Draining and Filling

Special Tools

- *GE-26568* Coolant and Battery Tester
- *GE-46143* Cooling System Adapter
- *GE-47716* Vac-N-Fill Coolant Refill Tool

Equivalent regional tools: Special Tools

Draining Procedure

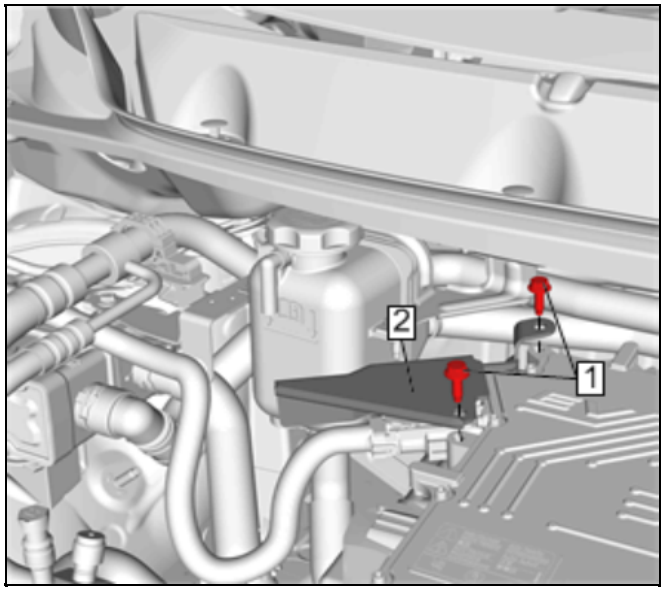
Danger: Before conducting any repair to this high voltage cooling system, it is necessary to determine/verify whether no high-voltage system faults exist. If high-voltage faults exist, follow published DTC diagnostics/repair procedures prior to performing any cooling system repairs. Failure to correct High Voltage Faults before working on the high voltage cooling system could result in personal injury or death.

Danger: Do not use a service jack in locations other than those specified to lift this vehicle. Lifting the vehicle with a jack in those other locations could cause the vehicle to slip off the jack and roll; this could cause injury or death.

Warning: To avoid being burned, do not remove the radiator cap or surge tank cap while the engine is hot. The cooling system will release scalding fluid and steam under pressure if radiator cap or surge tank cap is removed while the engine and radiator are still hot.

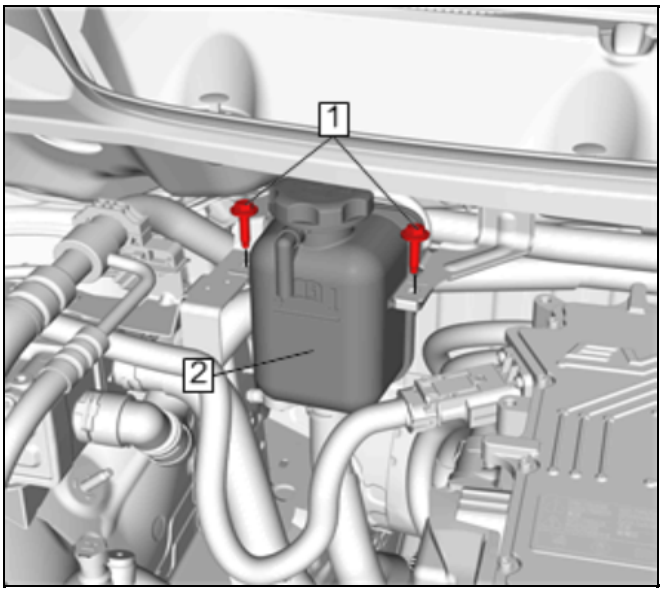
Note: Draining of the cooling system or replacement of any cabin heater coolant heater system parts requires the actuation of the Heater Coolant Pump Bleed Procedure for 5 minutes in the GDS tool.

1. Turn the vehicle power OFF, remove all keyless entry transmitters from the vehicle, and secure the transmitters outside of the vehicle.



4563415

2. Remove the 2 accessory DC power control module high voltage connector protector bolts (1).
3. Remove the accessory DC power control module high voltage connector protector (2).

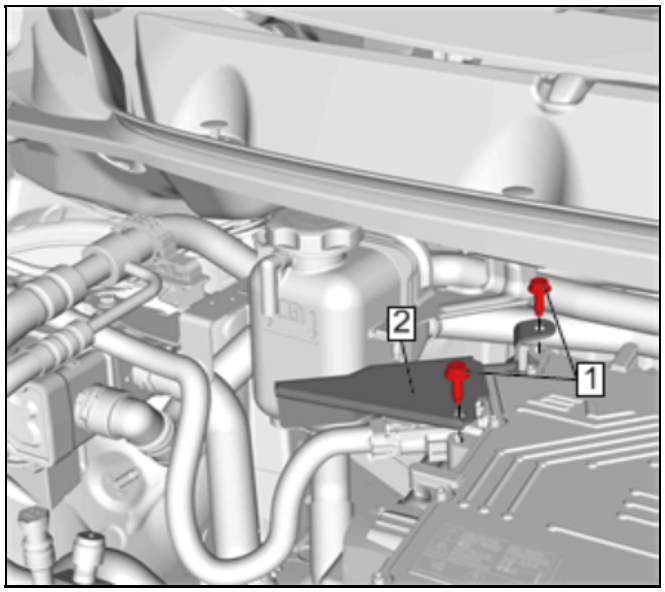


4563417

4. Remove the 2 heater coolant surge tank bolts (1).
5. Reposition the heater coolant surge tank (2) forward to install the cooling system adapter.
6. Remove the heater coolant surge tank cap.
7. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
8. Place a drain pan under the vehicle.
9. Remove the front compartment air deflector.
10. Remove the auxiliary heater outlet hose at the heater coolant pump. *Auxiliary Heater Outlet Hose Replacement on page 5-91*

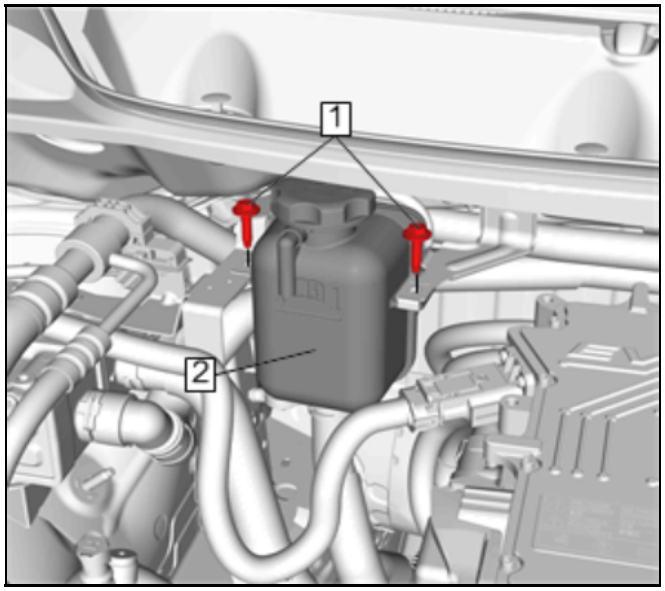
Vac-N-Fill Procedure

1. Install the auxiliary heater outlet hose at the heater coolant pump. *Auxiliary Heater Outlet Hose Replacement on page 5-91*
2. Install the front compartment air deflector.
3. Turn the vehicle power OFF, remove all keyless entry transmitters from the vehicle, and secure the transmitters outside of the vehicle.



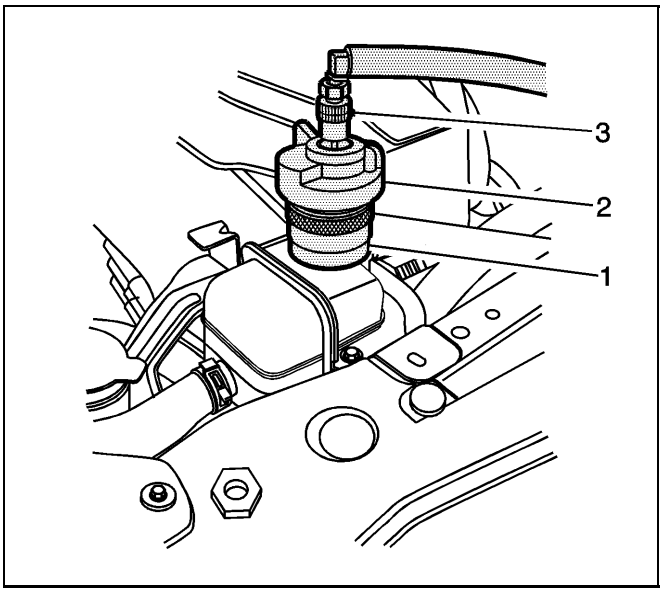
4563415

4. Remove the 2 accessory DC power control module high voltage connector protector bolts (1).
5. Remove the accessory DC power control module high voltage connector protector (2).



4563417

6. Remove the 2 heater coolant surge tank bolts (1).
7. Reposition the heater coolant surge tank (2) forward to install the cooling system adapter.
8. Remove the heater coolant surge tank cap.

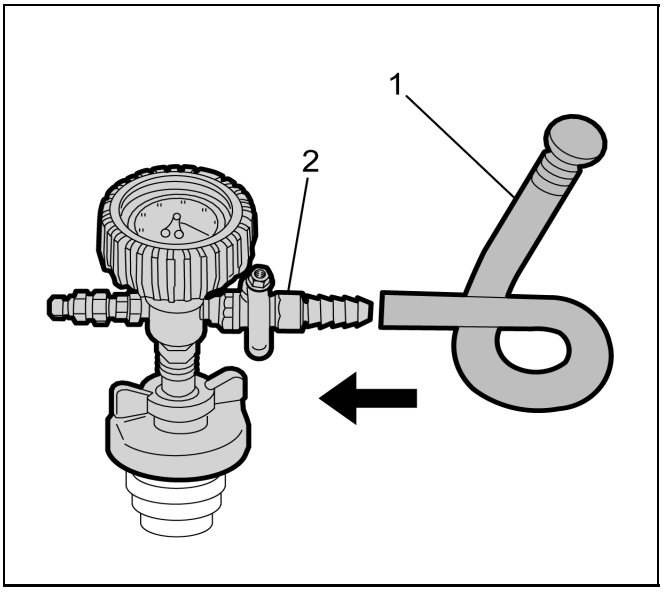


3242381

Note:

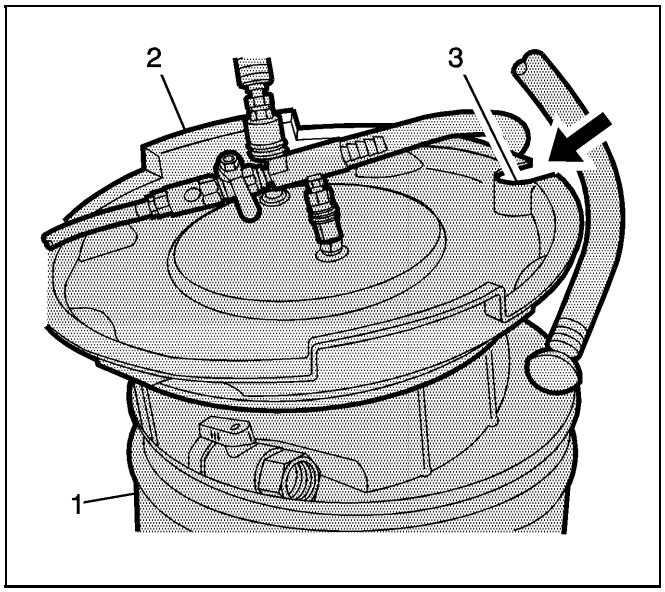
- The *GE-46143* adapter will NOT operate properly if the coolant is boiling.
- To prevent boiling of the coolant/water mixture in the vehicles cooling system, do NOT apply vacuum to a cooling system above **49°C (120°F)**.

9. Install the *GE-46143–2* adapter (1).
10. Attach the Vac-N-Fill cap (2) to the *GE-46143–2* adapter (1).
11. Attach the vacuum gauge assembly (3) to the Vac-N-Fill cap (2).



2846166

12. Ensure the valve on the vacuum gauge assembly is closed and attach the fill hose (1) to the barbed fitting (2).



2846170

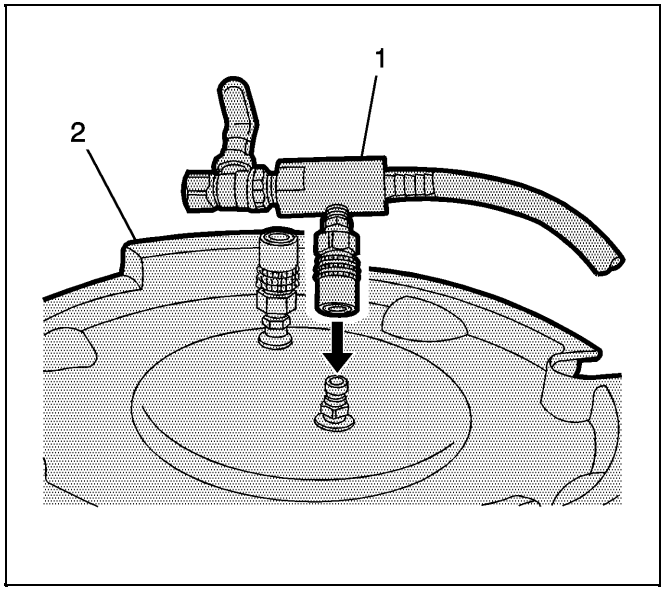
Note:

- Use Pre-mixed DEXCOOL® (50/50 mixture of DEXCOOL® and deionized water).
- Always use more coolant than necessary to eliminate air from being drawn into the cooling system.

13. Pour the coolant mixture into the graduated reservoir (1).
14. Place the fill hose in the graduated reservoir (1).

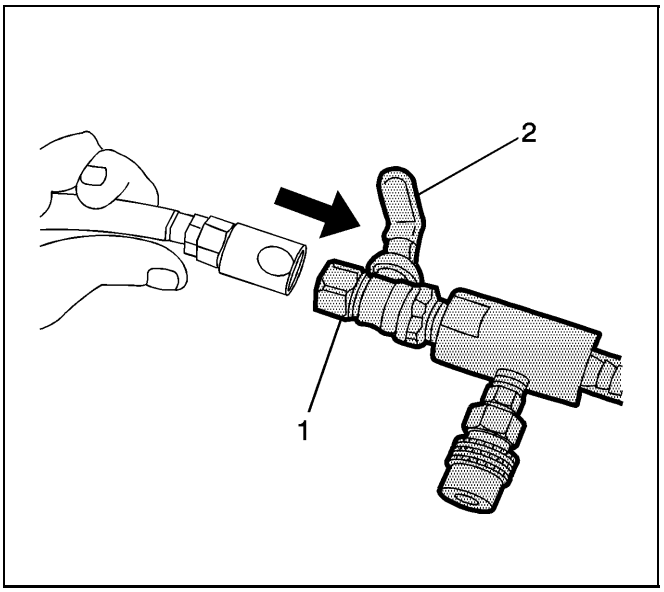
    Note: Prior to installing the vacuum tank to the graduated reservoir, ensure that the drain valve located on the bottom of the tank is closed.

15. Install the vacuum tank (2) to the graduated reservoir with the fill hose routed through the cut-out area (3) in the vacuum tank.



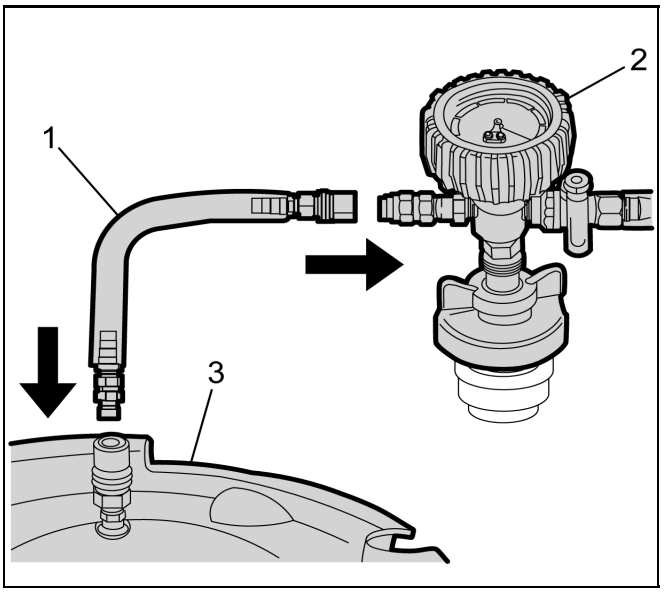
2846171

16. Attach the venturi assembly (1) to the vacuum tank (2).



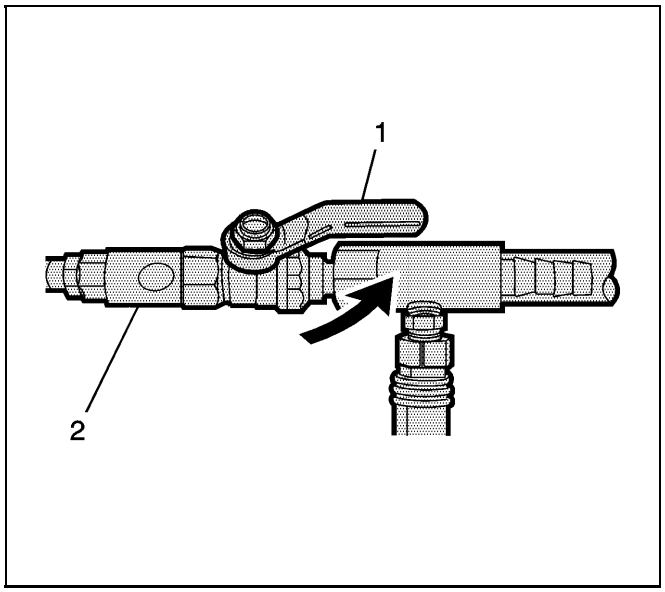
2846172

17. Ensure the valve (2) on the venturi assembly (1) is closed.
18. Attach a shop air hose to the venturi assembly (1).



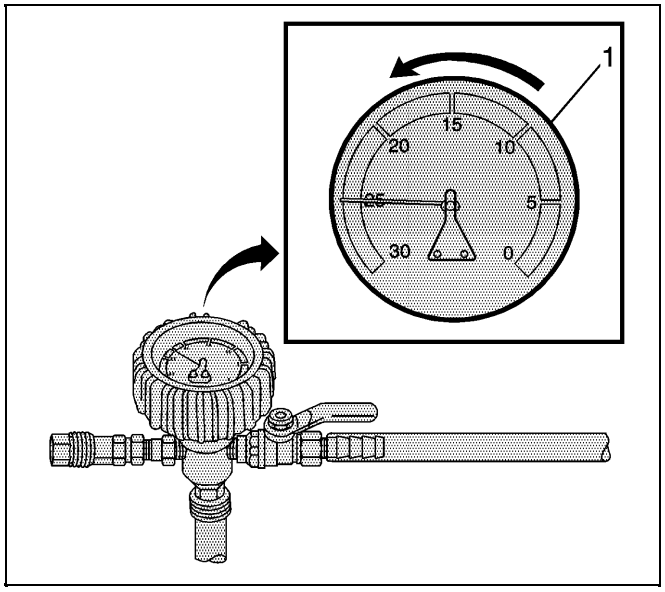
2846173

19. Attach the vacuum hose (1) to the vacuum gauge assembly (2) and the vacuum tank (3).



2846175

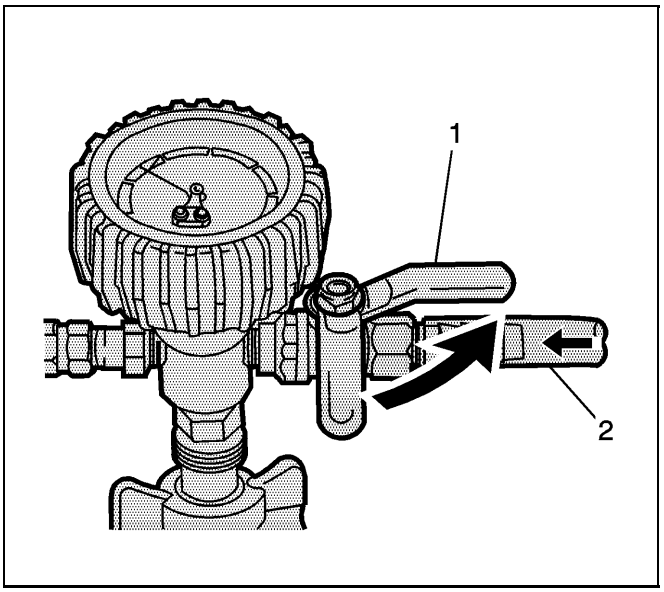
20. Open the valve (1) on the venturi assembly (2). The vacuum gauge will begin to rise and a hissing noise will be present.



2846177

Note: Normal behavior includes cooling hoses collapsing due to the vacuum draw.

21. Continue to draw vacuum until the needle stops rising (1) at **610–660 mm Hg (24–26 in Hg)**.
22. To aid in the fill process, position the graduated reservoir above the coolant fill port.

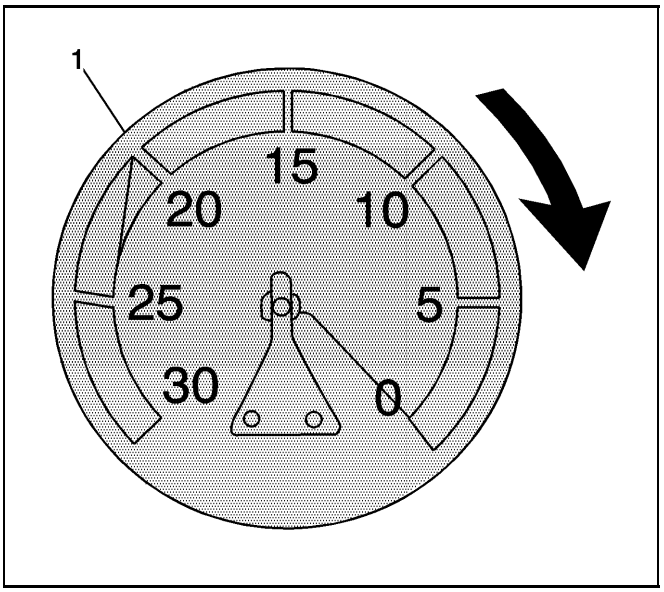


2846183

23. To eliminate air from the fill hose, slowly open the valve (1) on the vacuum gauge assembly (2) until the coolant reaches the top of the fill hose, then close the valve.
24. Close the valve on the venturi assembly.
25. If there is a suspected leak in the cooling system, allow the system to stabilize under vacuum and monitor for vacuum loss.

    If vacuum loss is observed: *Cabin Heater Coolant Heater System Loss of Coolant on page 5-16*

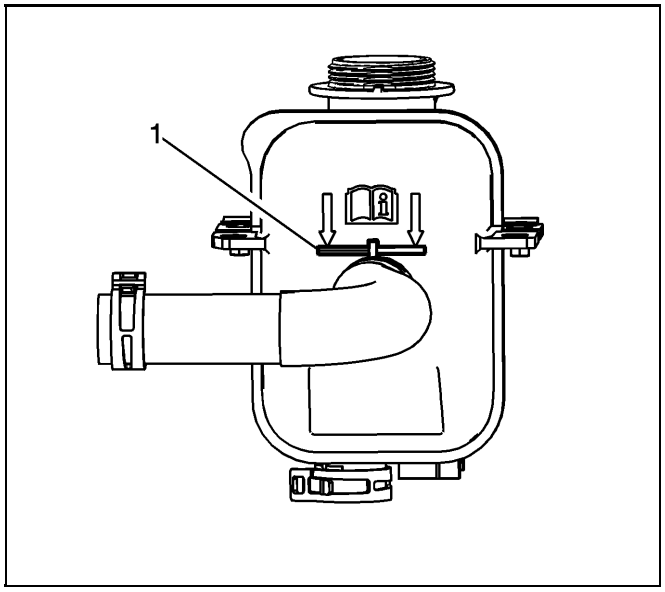
    Note: The vacuum gauge will drop as coolant is drawn into the system.
26. Open the valve on the vacuum gauge assembly.



3242386

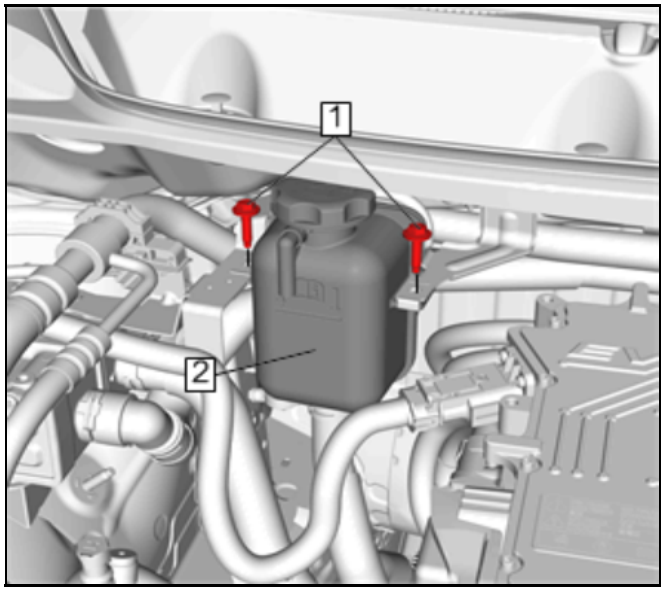
27. Once the vacuum gauge (1) reaches zero, close the valve on the vacuum gauge assembly and repeat steps 20–25.
28. Ensure the vehicle is in service mode. *Power Mode Description and Operation on page 6-610*

29. Detach the Vac-N-Fill cap from the *GE-46143-2* adapter.
30. Remove the *GE-46143–2* adapter.



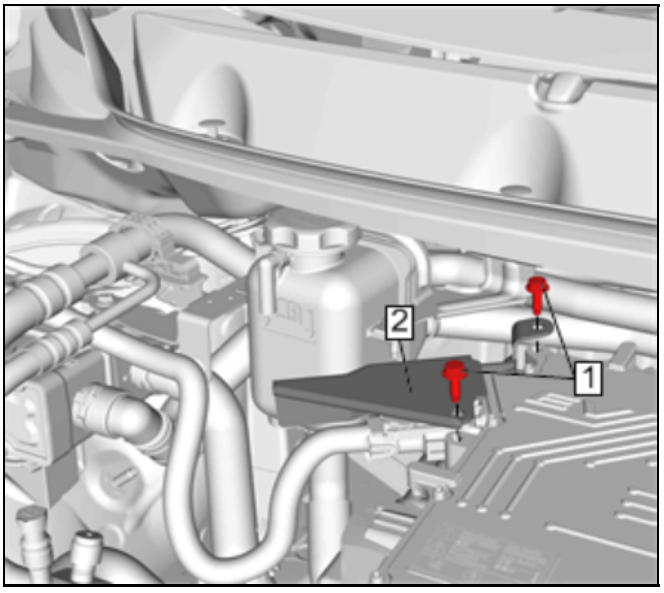
3242379

31. Adjust the heater coolant surge tank coolant level to a position just above the seam (1).
32. Use the *GE-26568* tester to check the concentration of the coolant mixture.
33. Install the heater coolant surge tank cap.



4563417

34. Install the heater coolant surge tank (2).
35. Install and tighten the 2 heater coolant surge tank bolts (1).



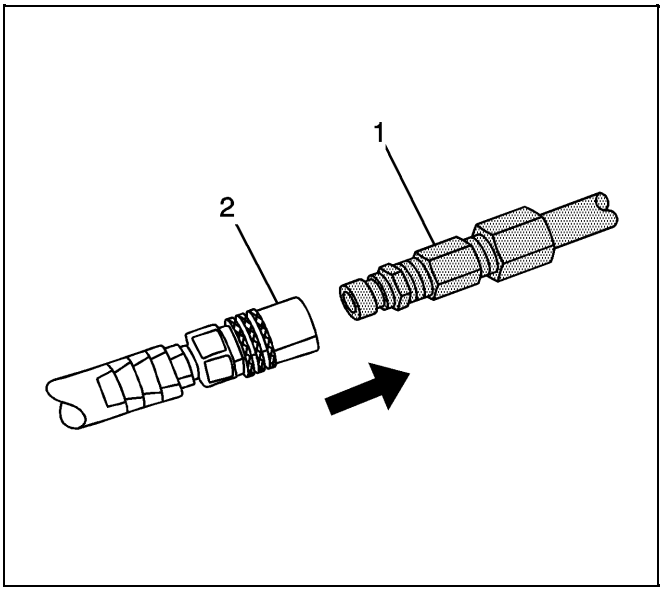
4563415

36. Install the accessory DC power control module high voltage connector protector (2).
37. Install and tighten the 2 accessory DC power control module high voltage connector protector bolts (1).

REMOVING EXCESS COOLANT FROM SYSTEM

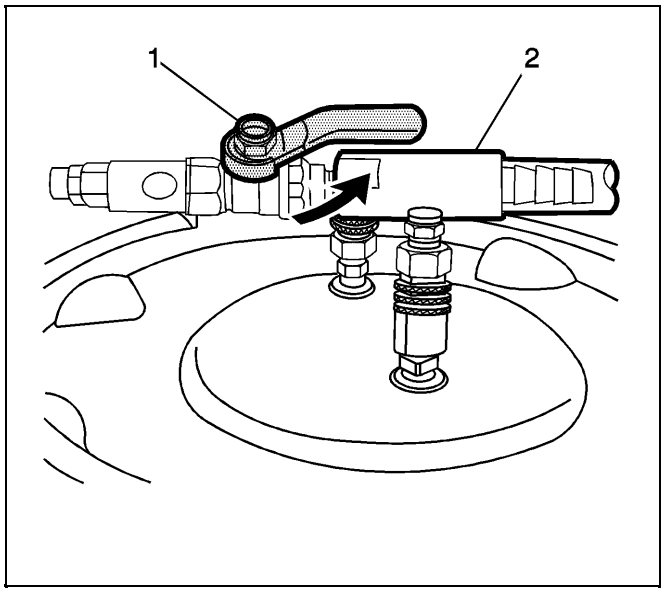
Note: After filling the cooling system, the extraction hose can be used to remove excess coolant to achieve the proper coolant level.

1. Detach the vacuum hose from the vacuum gauge assembly.



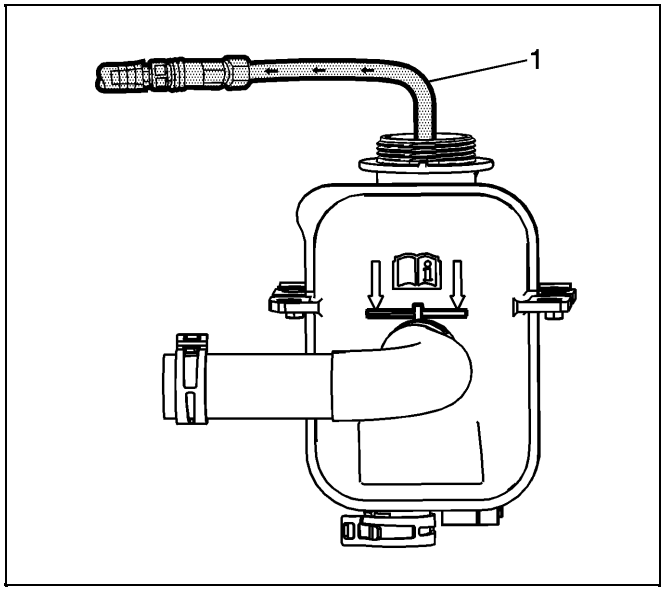
2857825

2. Attach the extraction hose (1) to the vacuum hose (2).



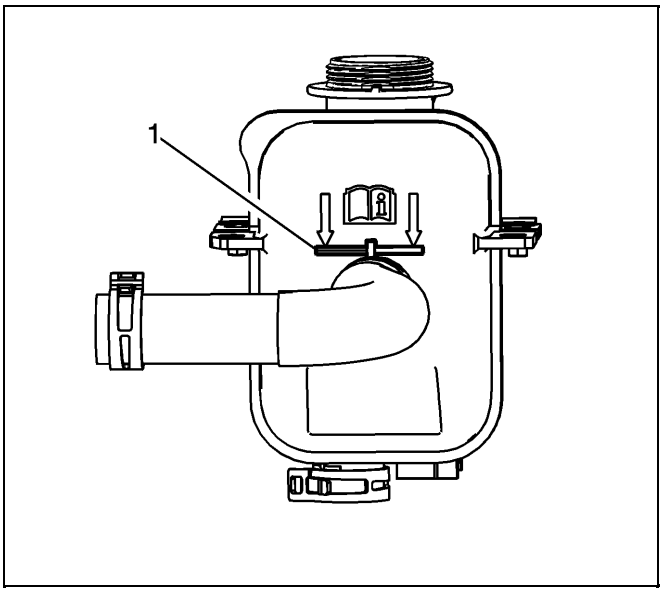
2857827

3. Open the valve (1) on the venturi assembly (2) to start a vacuum draw.



3242387

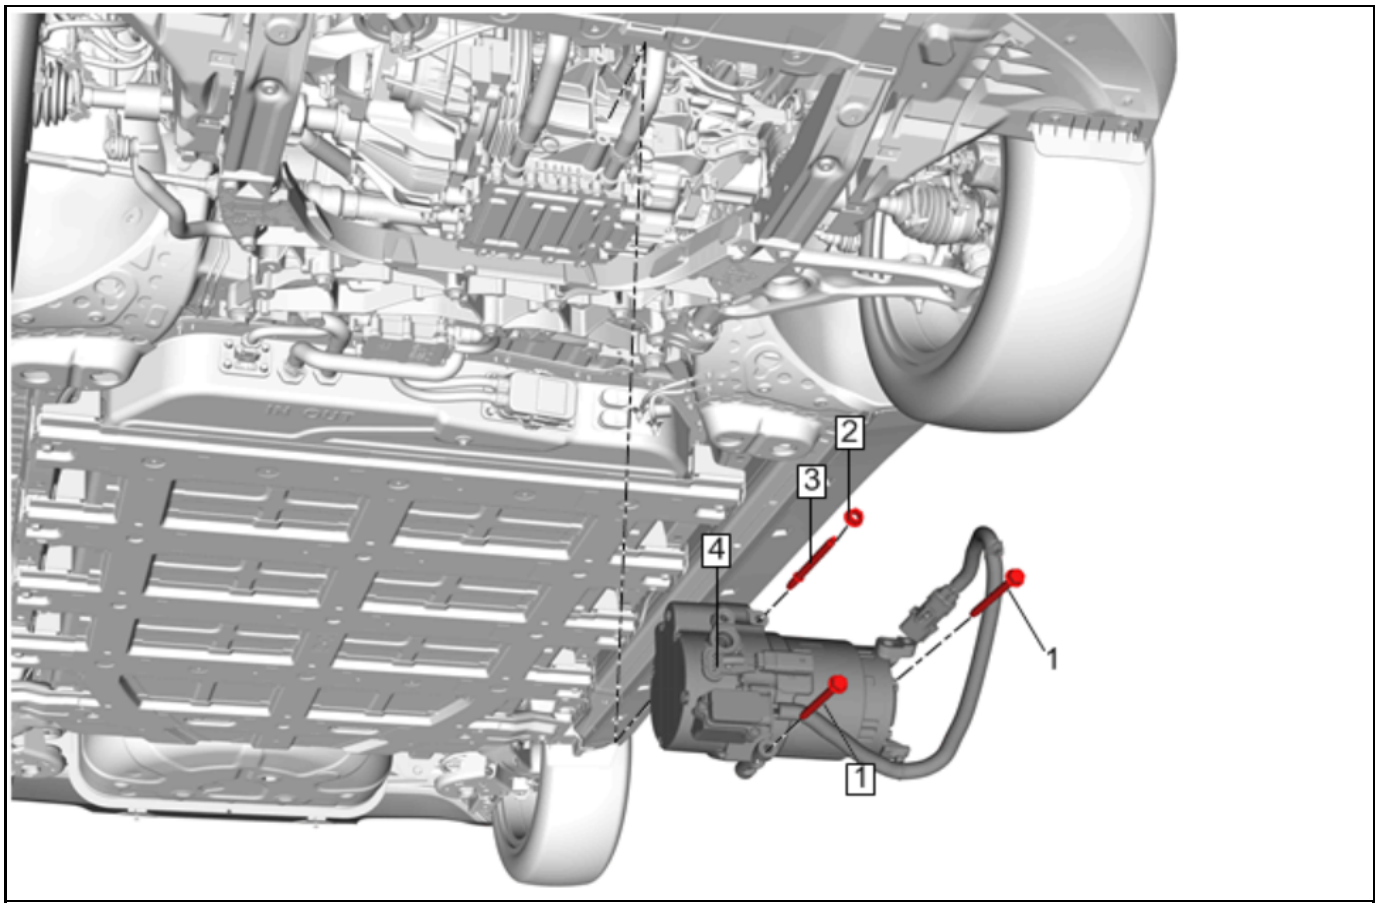
4. Assemble the extraction hose (1) and insert the hose into the heater coolant surge tank.



3242379

5. Adjust the heater coolant surge tank coolant level to a position just above the seam (1).
6. Open the drain valve on the bottom of the vacuum tank and drain the coolant into a suitable container for disposal.

Air Conditioning and Drive Motor Battery Cooling Compressor Replacement



4530284

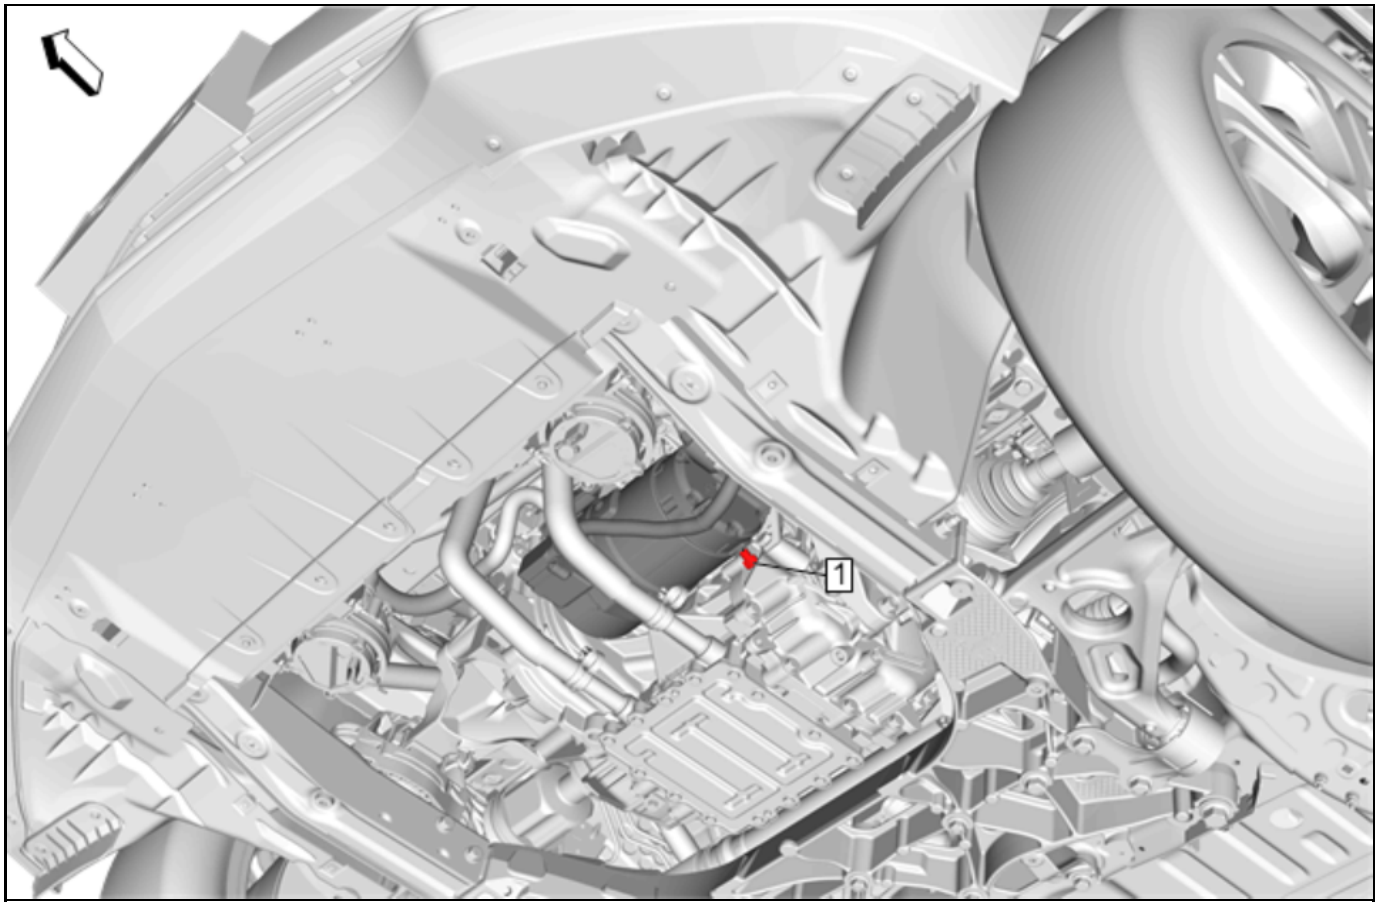
Air Conditioning and Drive Motor Battery Cooling Compressor Replacement

Callout	Component Name
Danger: Always perform the High Voltage Disabling procedure prior to servicing any High Voltage component or connection. Personal Protection Equipment (PPE) and proper procedures must be followed. ***The High Voltage Disabling procedure will perform the following tasks:*** • ***Identify how to disable high voltage.*** • ***Identify how to test for the presence of high voltage.*** • ***Identify condition under which high voltage is always present and personal protection equipment (PPE) and proper procedures must be followed.*** ***Failure to follow the procedures exactly as written may result in serious injury or death.*** ***Danger: Do not use a service jack in locations other than those specified to lift this vehicle. Lifting the vehicle with a jack in those other locations could cause the vehicle to slip off the jack and roll; this could cause injury or death.*** **Caution:** This A/C system's high voltage A/C Compressor uses Polyolester (POE) refrigerant oil instead of Polyalkylene Glycol (PAG) refrigerant oil. Use only approved GM POE oil no more than two hours after removal from its sealed moisture proof packaging (reference GM POE label for proper usage) in refrigerant systems equipped with a High Voltage A/C compressor. GM POE oil is intended to be used with the GE-45037-A A/C oil injector and the GE-48997 A/C POE oil injector hose. Use of any refrigerant oil other than the approved GM POE, handled and installed per GM's requirements may result in compressor failure and/or loss of HV isolation with associated DTC's set. **Preliminary Procedures** 1. Disable the high voltage. 2. Remove the air conditioning compressor hose from the compressor. *Air Conditioning Compressor Hose Replacement on page 5-31* 3. Remove the air conditioning condenser hose from the compressor. *Air Conditioning Condenser Hose Replacement on page 5-35* 4. Remove the left front wheelhouse liner.	
1	Air Conditioning and Drive Motor Cooling Compressor Bolt [2x] **Tighten** 22 N•m (16 lb ft)

Air Conditioning and Drive Motor Battery Cooling Compressor Replacement (cont'd)

Callout	Component Name
2	Air Conditioning and Drive Motor Cooling Compressor Nut **Tighten** 22 N•m (16 lb ft)
3	Air Conditioning and Drive Motor Cooling Compressor Stud **Tighten** 10 N•m(89 lb in)
4	Air Conditioning and Drive Motor Cooling Compressor **Procedure** 1. Disconnect and unclip the high voltage compressor connector. 2. Disconnect the low voltage connector. 3. A/C compressor oil balancing is not required. The service A/C compressor contains enough oil; however, add any oil that was removed during the A/C system recovery process. Refer to *Refrigerant Recovery and Recharging on page 5-18*. 4. If replacing the A/C compressor, it is necessary to program the replacement A/C compressor. 5. Enable the high voltage.

Air Conditioning Compressor Pressure Relief Valve Replacement



4530296

Air Conditioning Compressor Pressure Relief Valve Replacement

Callout	Component Name
Preliminary Procedures 1. *Refrigerant Recovery and Recharging on page 5-18*	
1	Air Conditioning Compressor Pressure Relief Valve **Tighten** 7 N•m (62 lb in)

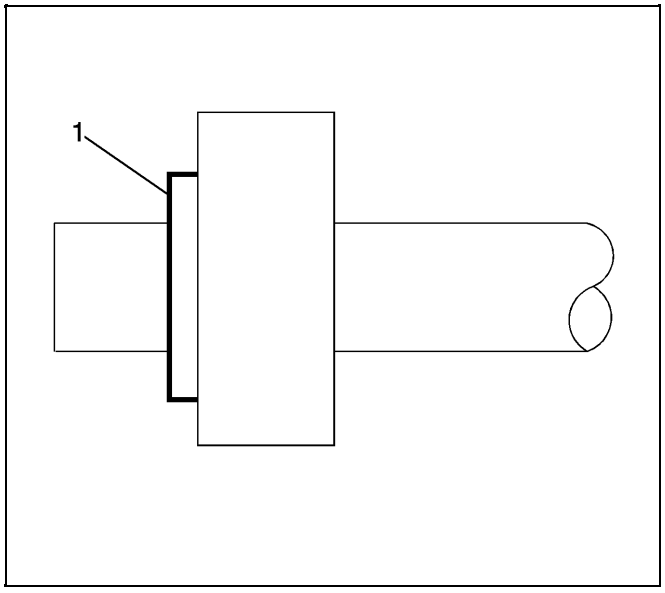
Air Conditioning System Seal Replacement

Removal Procedure

1. Disassemble the A/C refrigerant components. Refer to the appropriate repair procedure.

   Note: Cap or tape the open A/C refrigerant components immediately to prevent system contamination.

2. Cap or tape the A/C refrigerant components.



2611419

3. Remove the sealing washer (1) from the A/C refrigerant component.
4. Inspect the seal washer for signs of damage to help determine the root cause of the failure.
5. Inspect the A/C refrigerant components for damage or burrs. Repair if necessary.

   Note: DO NOT reuse sealing washer.

6. DISCARD the sealing washer.

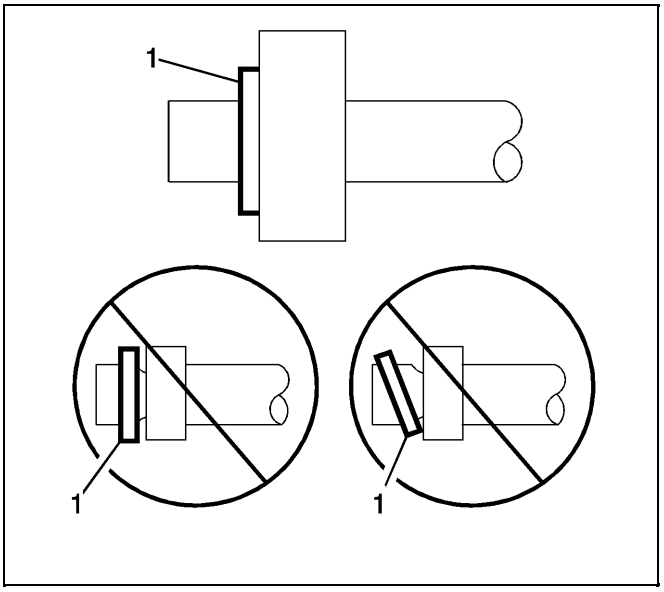
Installation Procedure

Caution: New Air Conditioning sealing washers should never be exposed to any type of oil or lubricant, the rubber material may absorb the oil causing failures during installation or the life of the vehicle.

1. Inspect the new sealing washer for any signs of cracks, cuts, or damage.

   Do not use a damaged sealing washer.

2. Remove the cap or tape from the A/C refrigerant components.



662315

3. Using a lint-free clean, dry cloth, clean the sealing surfaces of the A/C refrigerant components.
4. Carefully install the NEW sealing washer (1) onto the A/C refrigerant component.

   The sealing washer (1) must completely bottom against the surface of the fitting.

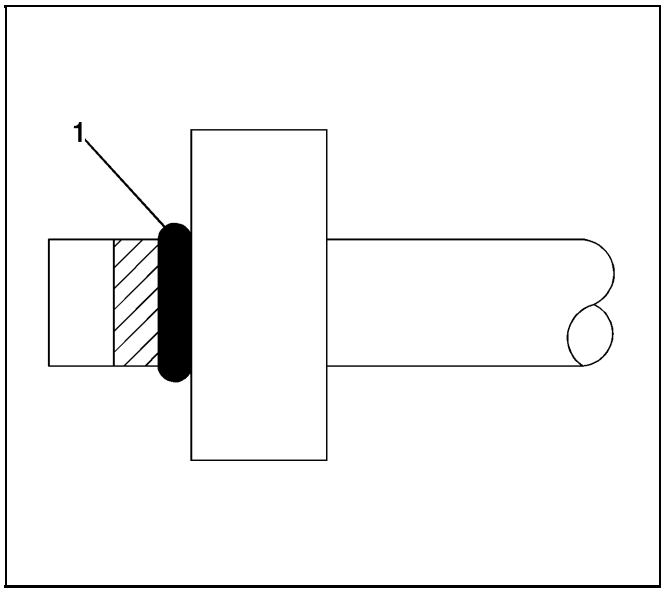
   Note: After tightening the A/C components, there should be a slight sealing gap of approximately 1.2 mm (3/64 in) between the A/C line and the A/C component.

5. Assemble the remaining A/C refrigerant components. Refer to the appropriate repair procedure.

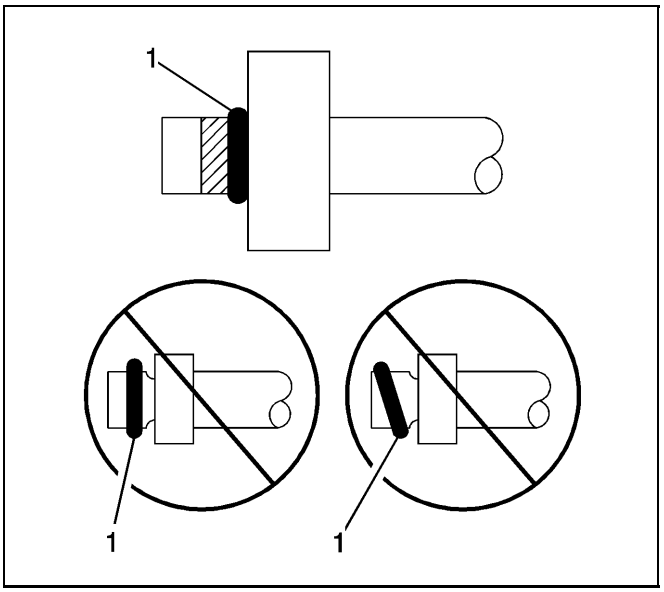
Air Conditioning O-Ring Seal Replacement

Removal Procedure

1. Disassemble the air conditioning refrigerant components.
2. Cap or tape the open air conditioning refrigerant components immediately to prevent system contamination.



2611417



818438

3. Remove the O-ring seal (1) from the air conditioning refrigerant component.
4. Inspect the O-ring seal for signs of damage to help determine the root cause of the failure.
5. Inspect the air conditioning refrigerant components for damage or burrs. Repair if necessary.
6. DISCARD the O-ring seal.

Installation Procedure

Caution: New Air Conditioning sealing washers should never be exposed to any type of oil or lubricant, the rubber material may absorb the oil causing failures during installation or the life of the vehicle.

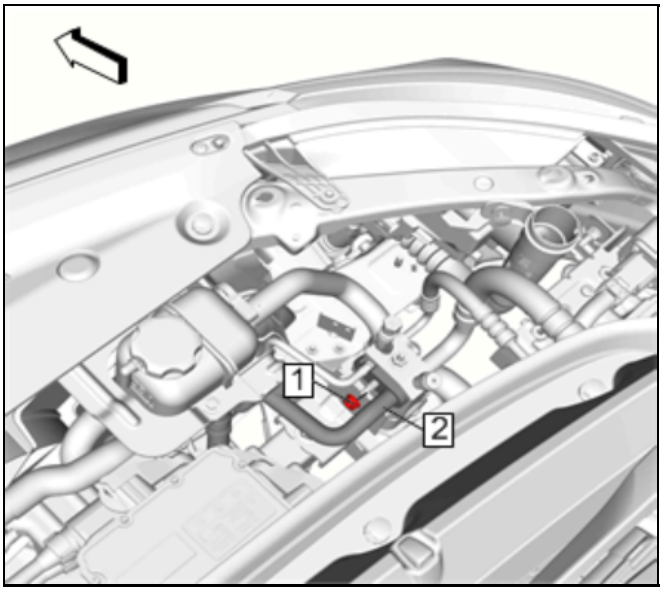
1. Inspect the new O-ring seal for any sign of cracks, cuts, or damage.
2. Remove the cap or tape from the air conditioning refrigerant components.
3. Using a lint-free clean, dry cloth, carefully clean the sealing surfaces of the air conditioning refrigerant components.

   Note: DO NOT reuse O-ring seals.
4. Carefully slide the NEW O-ring seal (1) onto the air conditioning refrigerant component.
5. The O-ring seal (1) must be fully seated.
6. Assemble the air conditioning components.

Air Conditioning Compressor Hose Replacement

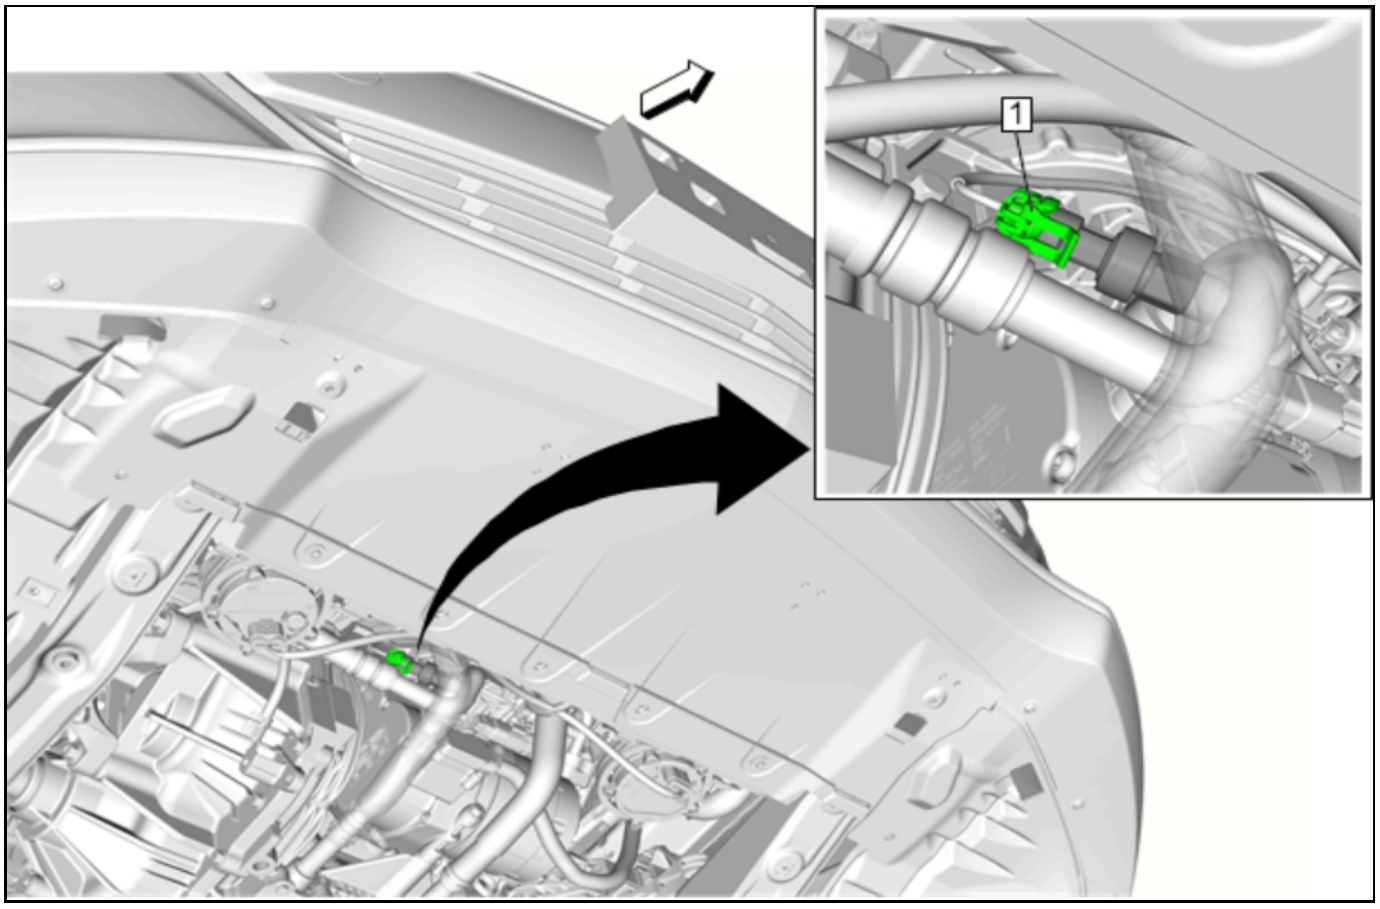
Removal Procedure

1. Disconnect the battery negative cable.
2. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*



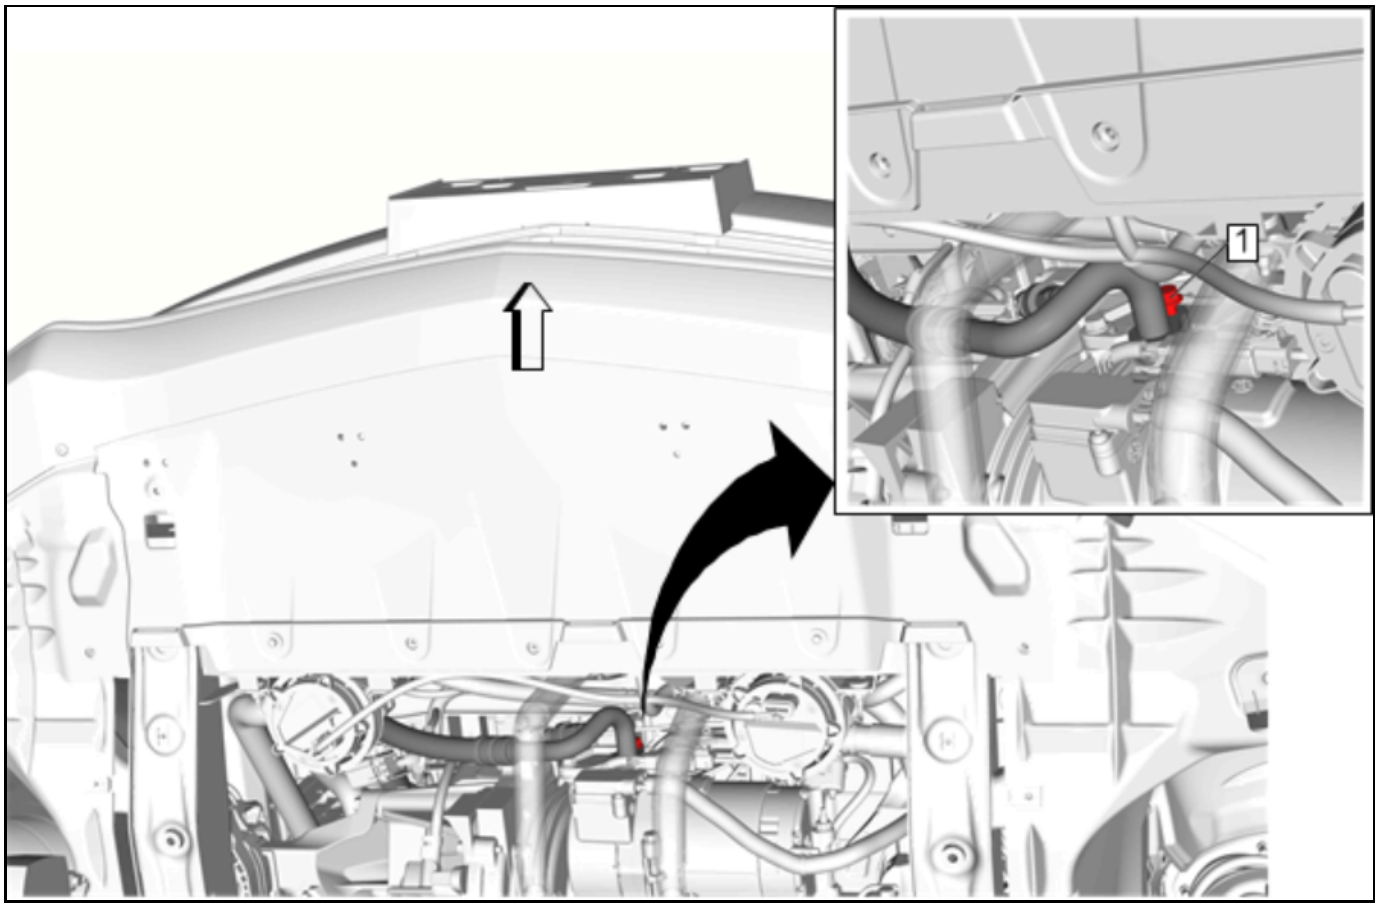
4530295

3. Remove the air conditioning compressor hose nut (1).
4. Remove the air conditioning compressor hose (2) from the air conditioning evaporator hose.
5. Raise the vehicle.
6. Front Compartment Air Deflector » Remove — Front Compartment Air Deflector Replacement



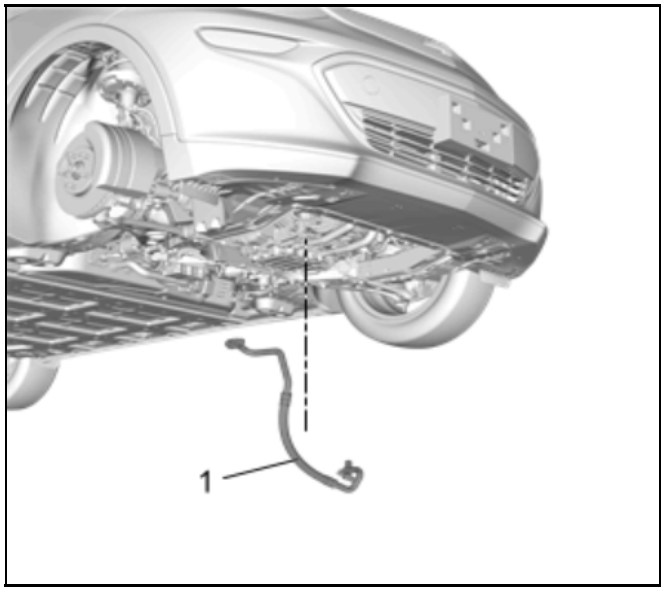
4530294

7. Disconnect the electrical connector (1) from the air conditioning (A/C) refrigerant pressure sensor.



4530293

8. Remove the air conditioning compressor hose bolt (1) from the air conditioning compressor.

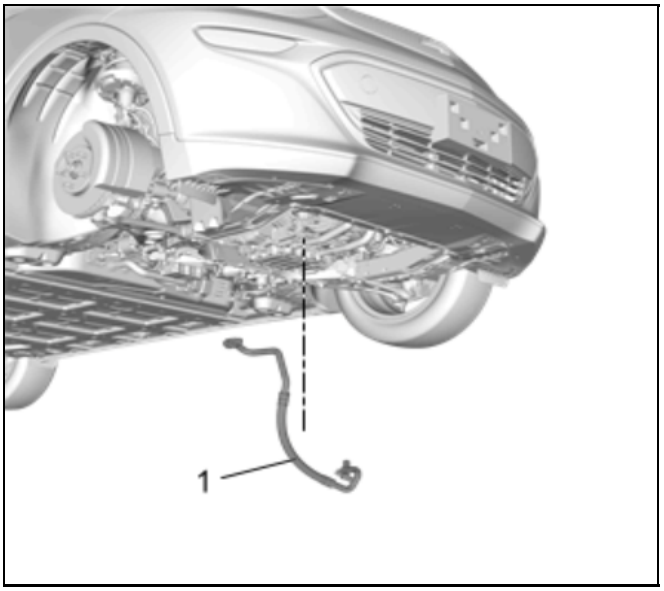


4530292

9. Air Conditioning Compressor Hose (1)» Remove
10. Remove the low pressure air conditioning refrigerant pressure sensor. *Air Conditioning Refrigerant Pressure Sensor Replacement - Low Pressure on page 5-50*

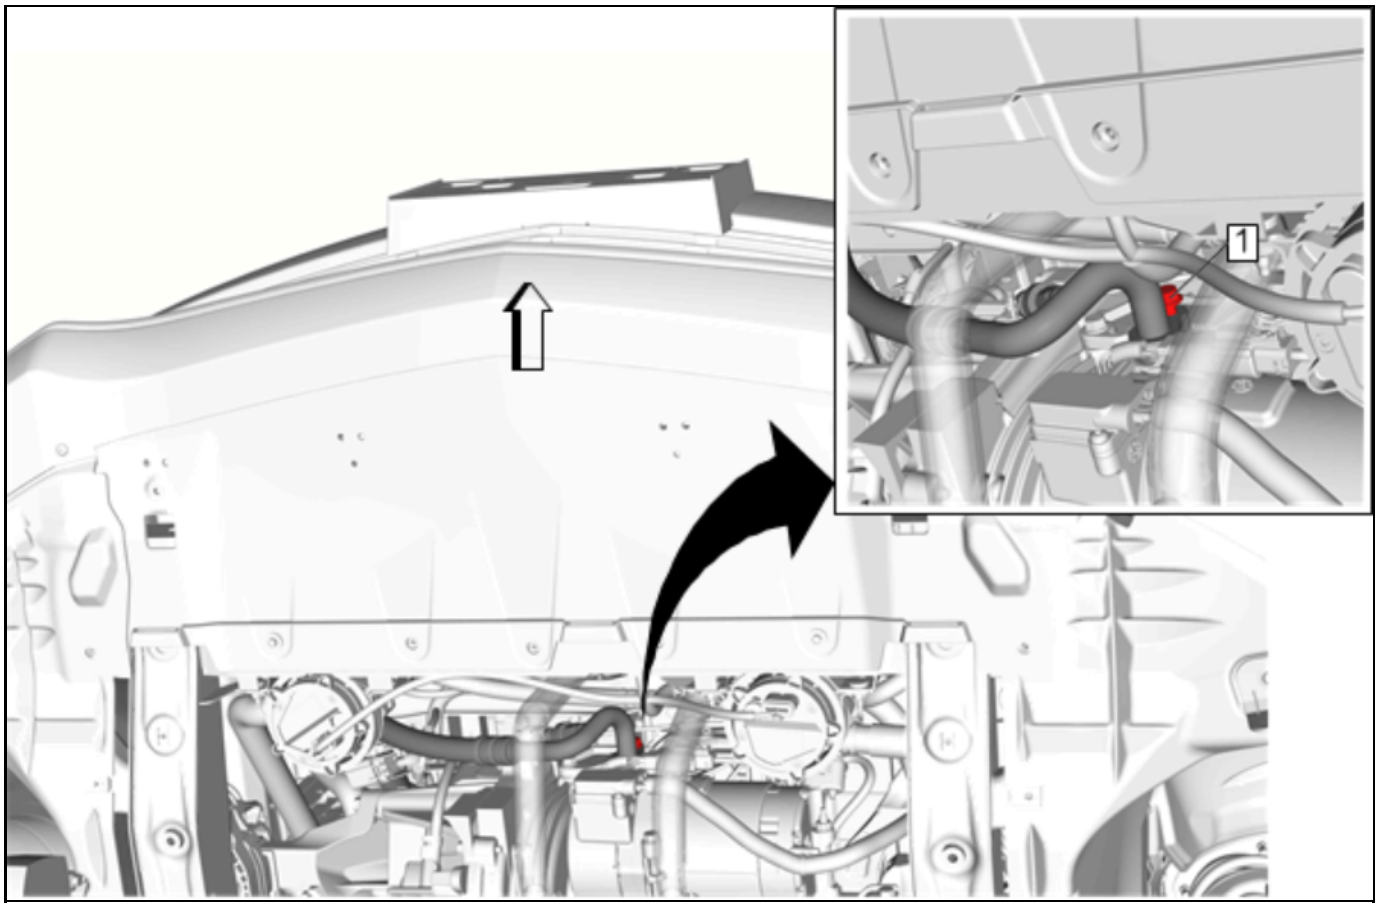
Installation Procedure

1. Install the low pressure air conditioning refrigerant pressure sensor. *Air Conditioning Refrigerant Pressure Sensor Replacement - Low Pressure on page 5-50*
2. Change the air conditioning sealing washer. *Air Conditioning System Seal Replacement on page 5-30*



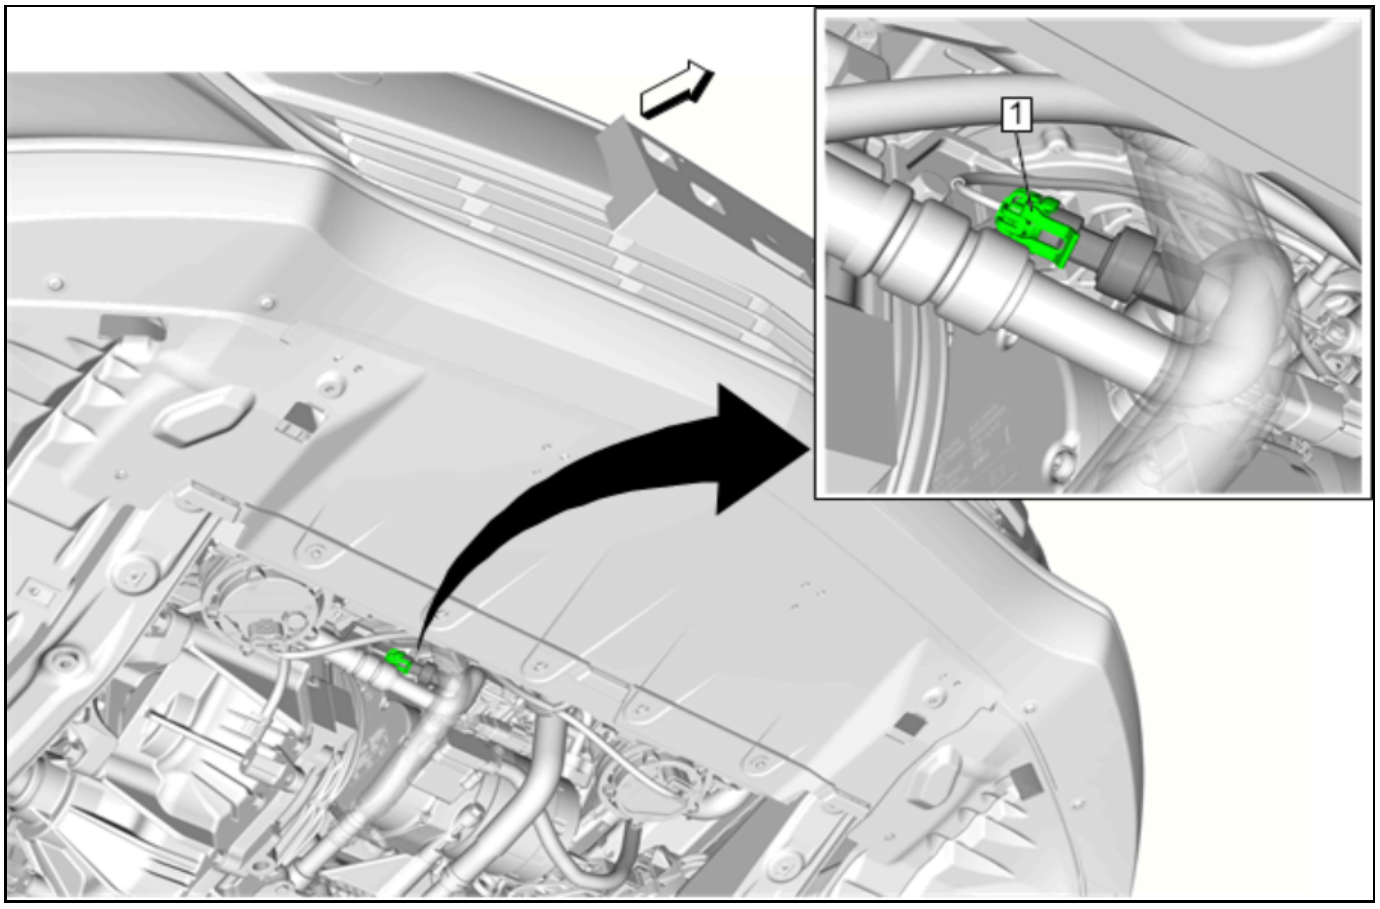
4530292

3. Position the air conditioning compressor hose (1) to the vehicle.



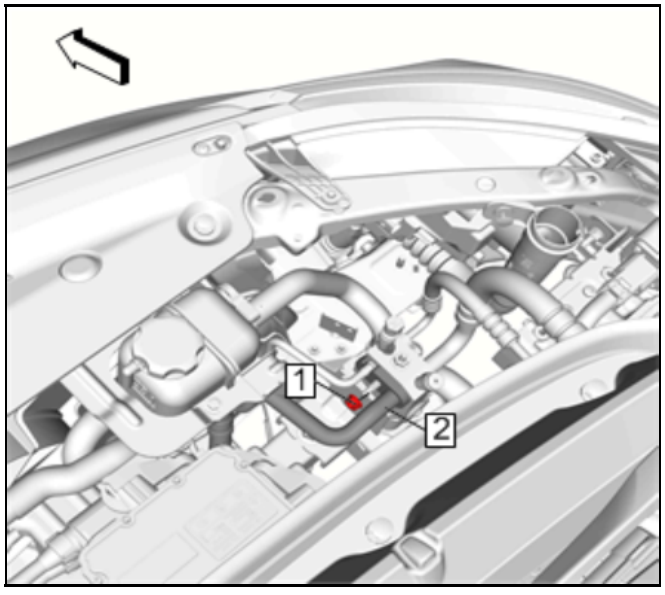
4530293

4. Install the air conditioning compressor hose bolt (1) to the air conditioning compressor and tighten to **22** N•m **(16 lb ft)**.



4530294

5. Connect the electrical connector (1) to the air conditioning (A/C) refrigerant pressure sensor.
6. Front Compartment Air Deflector » Install — Front Compartment Air Deflector Replacement
7. Lower the vehicle.



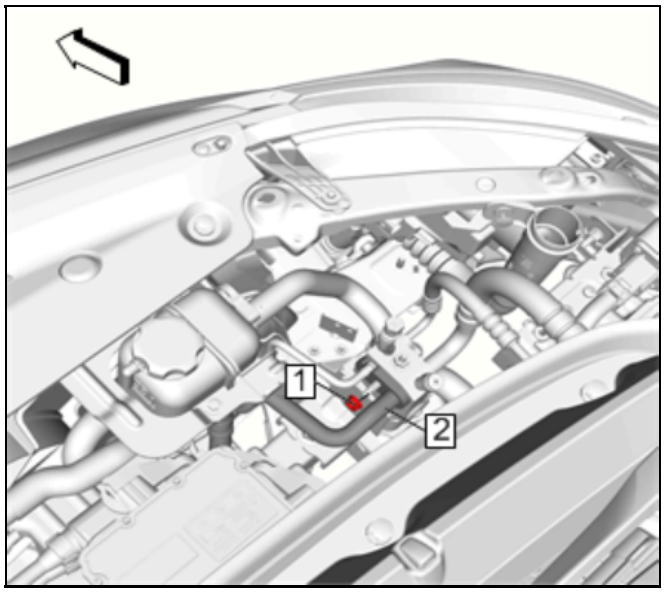
4530295

8. Install the air conditioning compressor hose (2) to the air conditioning evaporator hose.
9. Tighten the air conditioning compressor hose nut (1) to **22** N•m **(16 lb ft)**
10. Evacuate and charge the refrigerant system. *Refrigerant Recovery and Recharging on page 5-18*
11. Connect the battery negative cable.

Air Conditioning Condenser Hose Replacement

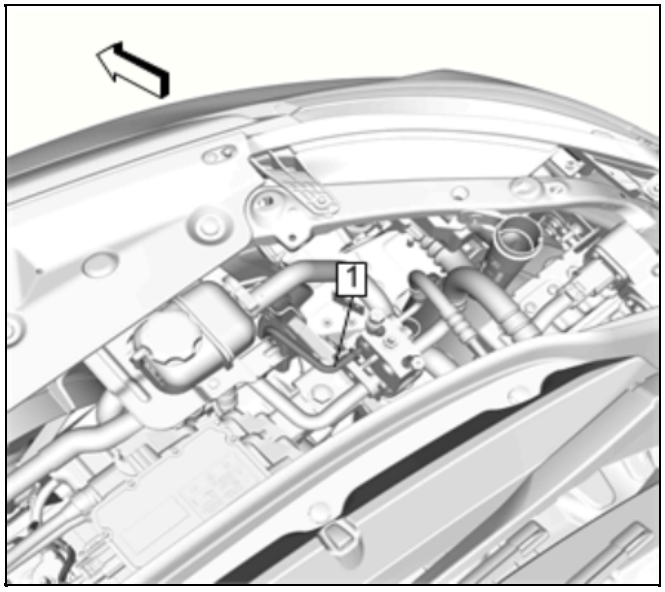
Removal Procedure

1. Disconnect the battery negative cable.
2. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*



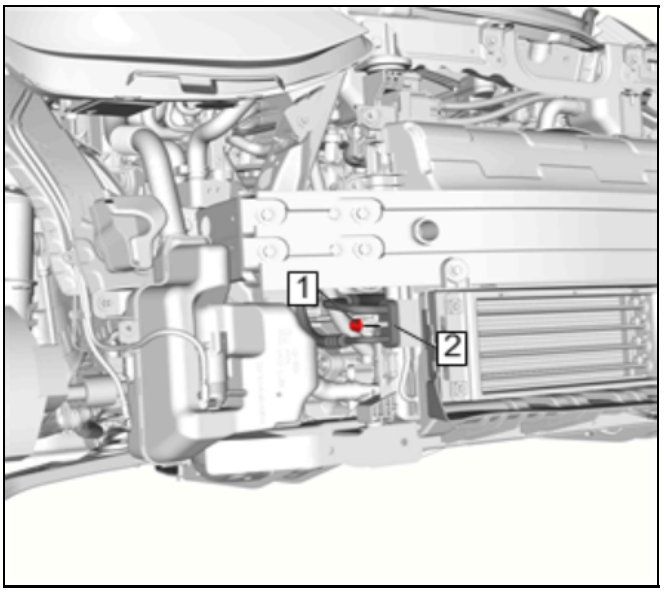
4530295

3. Remove the air conditioning compressor hose nut (1). *Air Conditioning Compressor Hose Replacement on page 5-31*



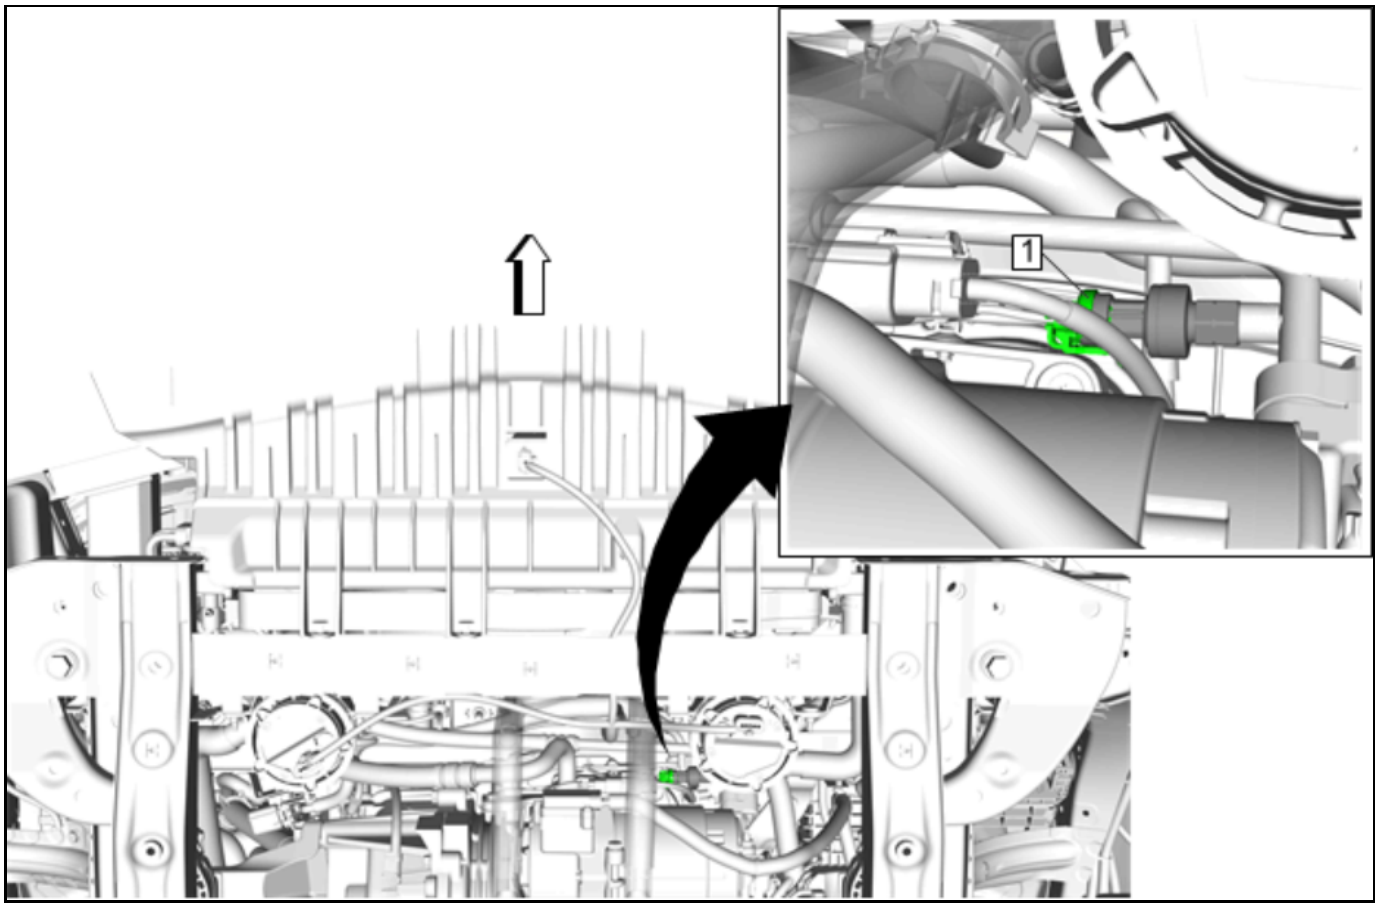
4530291

4. Remove the air conditioning condenser hose (1) from the air conditioning evaporator hose.
5. Raise the vehicle.
6. Front Compartment Air Deflector » Remove — Front Compartment Air Deflector Replacement
7. Front Bumper Fascia » Remove — Front Bumper Fascia Replacement



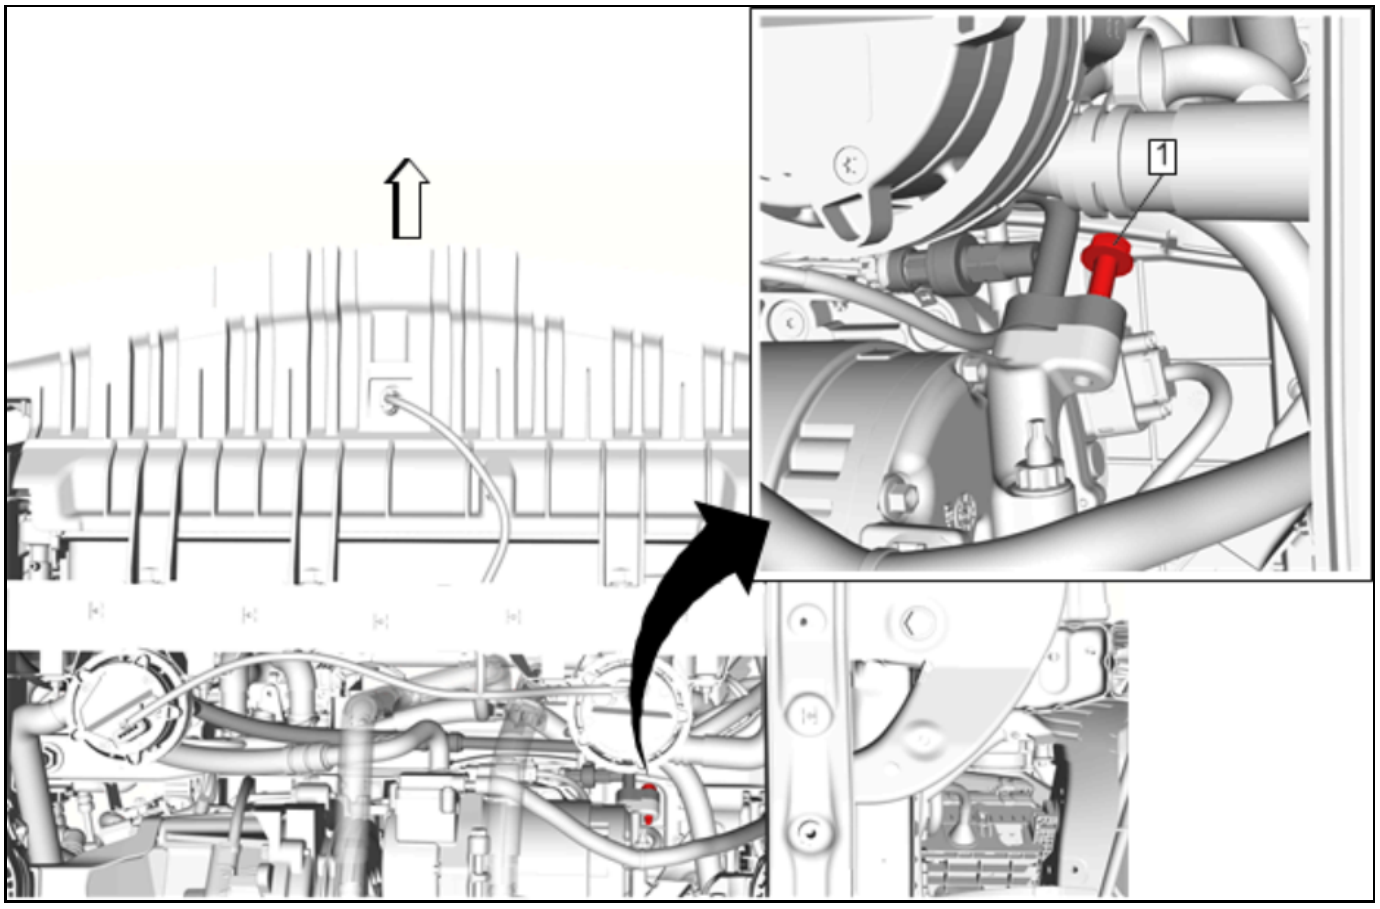
4530290

8. Remove the air conditioning condenser hose nut (1).
9. Remove the air conditioning condenser hose (2) from the air conditioning condenser.



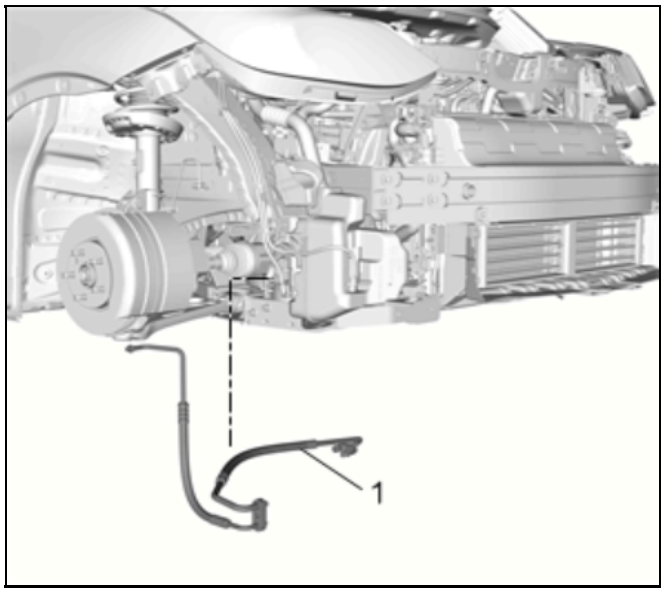
4530289

10. Disconnect the electrical connector (1) from the air conditioning (A/C) refrigerant pressure sensor.



4530288

11. Remove the air conditioning condenser hose bolt (1) from the air conditioning compressor.

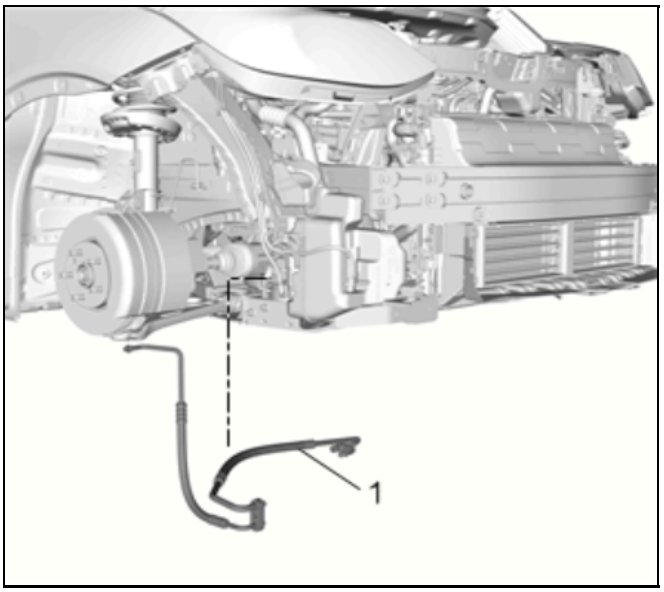


4530287

12. Air Conditioning Condenser Hose (1)» Remove
13. Remove the high pressure air conditioning refrigerant pressure sensor. *Air Conditioning Refrigerant Pressure Sensor Replacement - High Pressure on page 5-51*

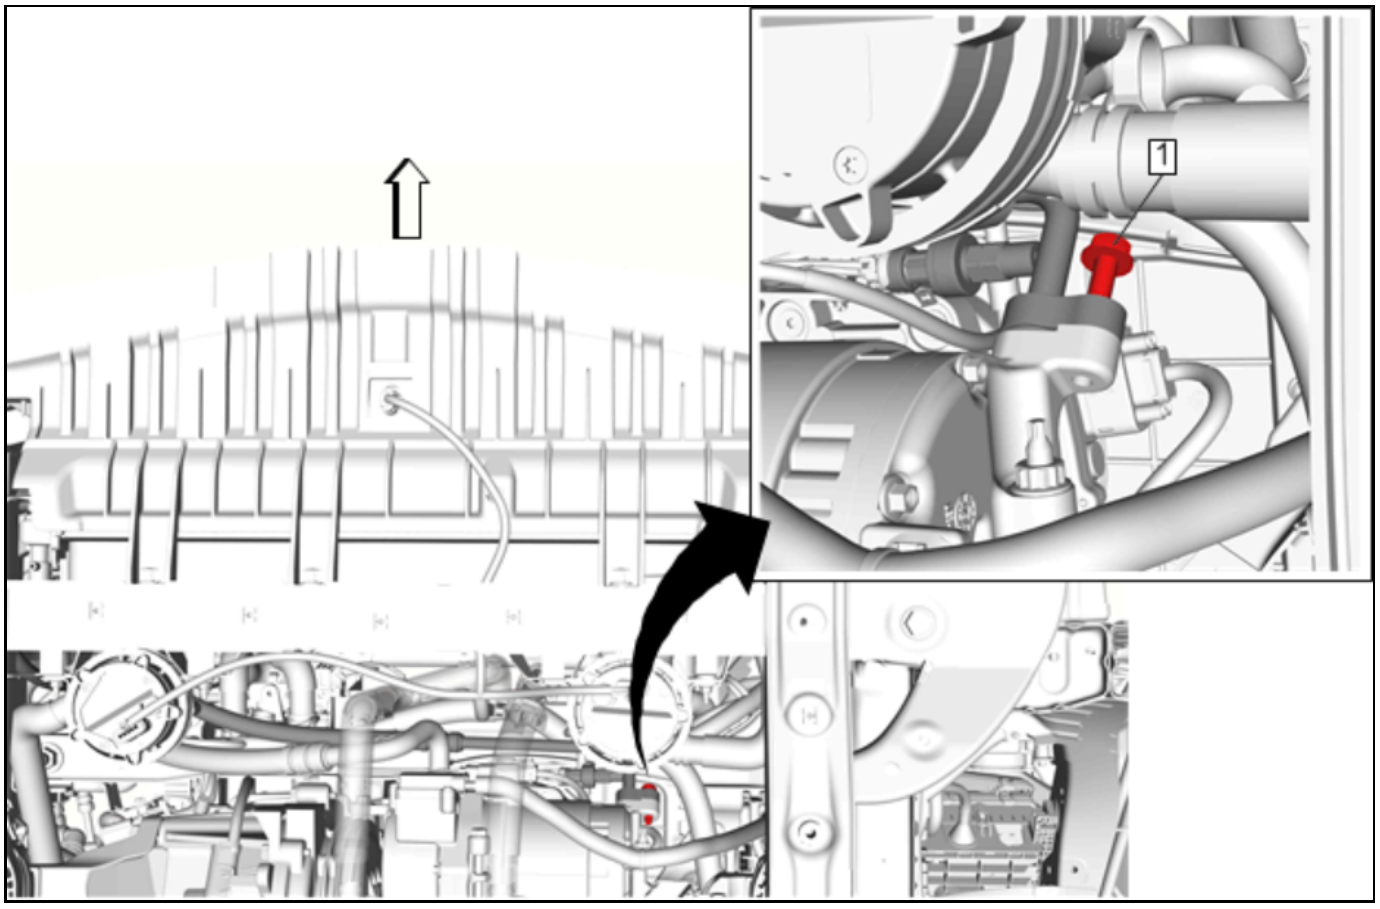
Installation Procedure

1. Install the high pressure air conditioning refrigerant pressure sensor. *Air Conditioning Refrigerant Pressure Sensor Replacement - High Pressure on page 5-51*
2. Change the air conditioning sealing washer. *Air Conditioning System Seal Replacement on page 5-30*



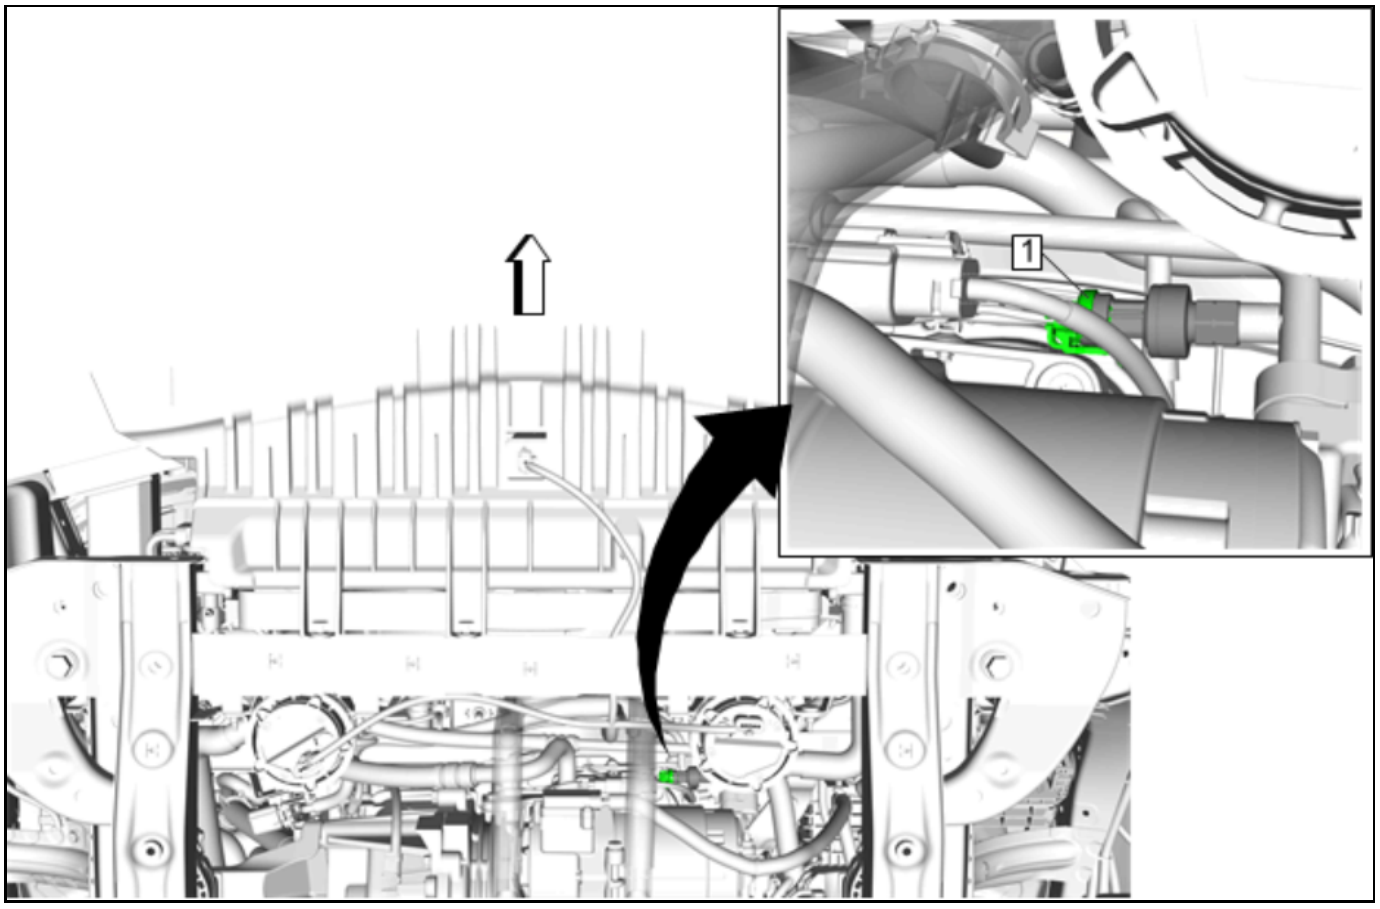
4530287

3. Position the air conditioning condenser hose (1) to the vehicle.



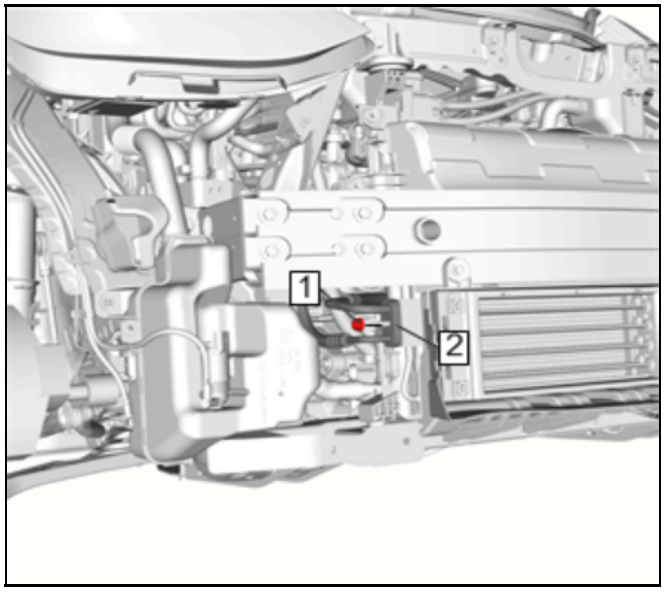
4530288

4. Install the air conditioning condenser hose bolt (1) to the compressor and tighten to **22** N•m**(16 lb ft)** .



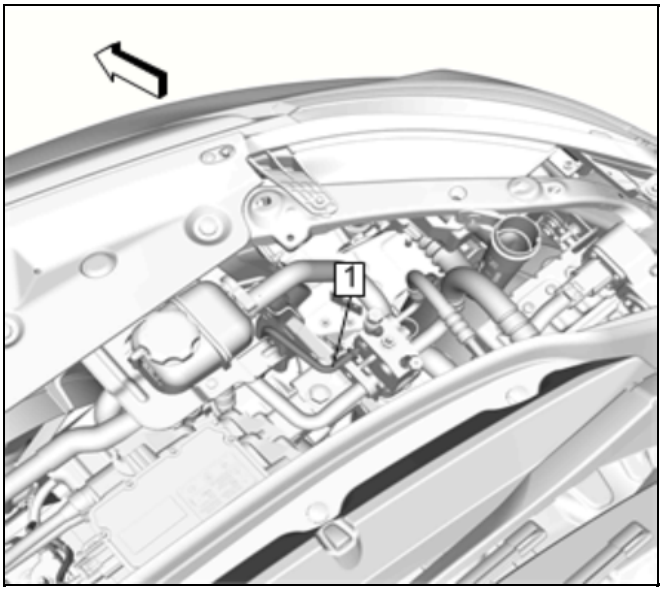
4530289

5. Connect the electrical connector (1) to the air conditioning (A/C) refrigerant pressure sensor.



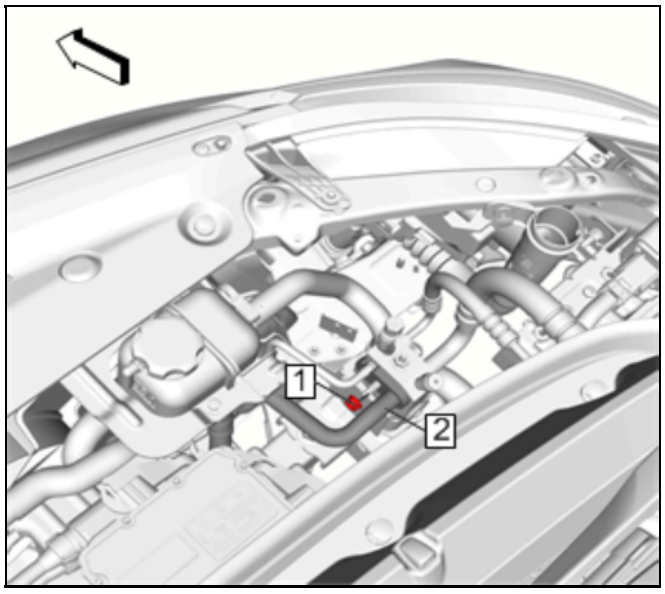
4530290

6. Install the air conditioning condenser hose (1) to the air conditioning condenser.
7. Install the air conditioning condenser hose nut (2) and tighten to **22 N•m (16 lb ft)** .
8. Front Bumper Fascia » Install — Front Bumper Fascia Replacement
9. Front Compartment Air Deflector » Install — Front Compartment Air Deflector Replacement
10. Lower the vehicle.



4530291

11. Install the air conditioning condenser hose (1) to the air conditioning evaporator hose.



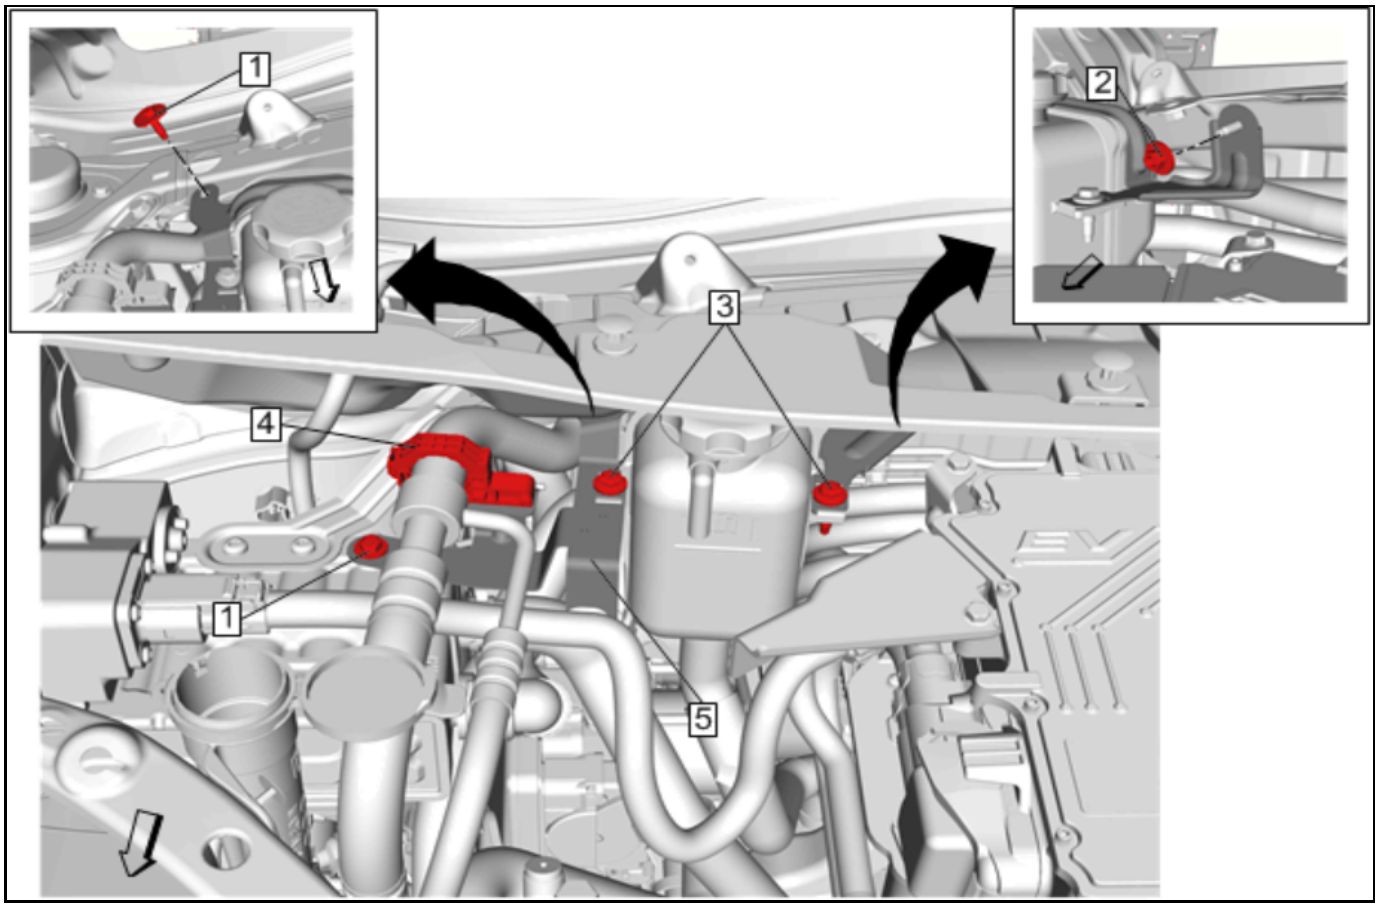
4530295

12. Remove the air conditioning compressor hose nut (1). *Air Conditioning Compressor Hose Replacement on page 5-31*
13. Evacuate and charge the refrigerant system. *Refrigerant Recovery and Recharging on page 5-18*
14. Connect the battery negative cable.

Air Conditioning Evaporator Hose Replacement

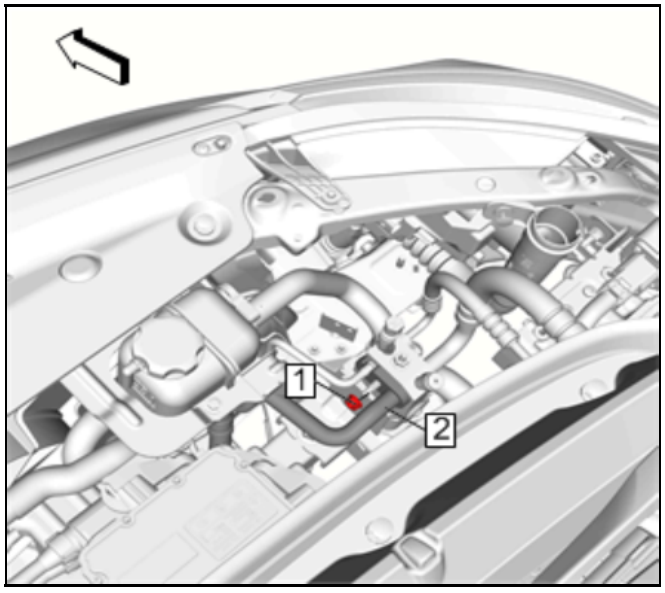
Removal Procedure

1. Disconnect the battery negative cable.
2. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*



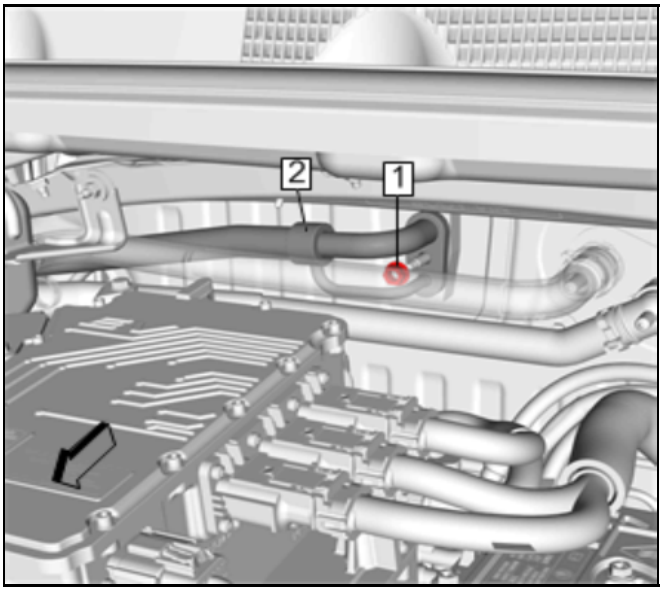
4500142

3. Remove the radiator surge tank support bracket (4) — heater.



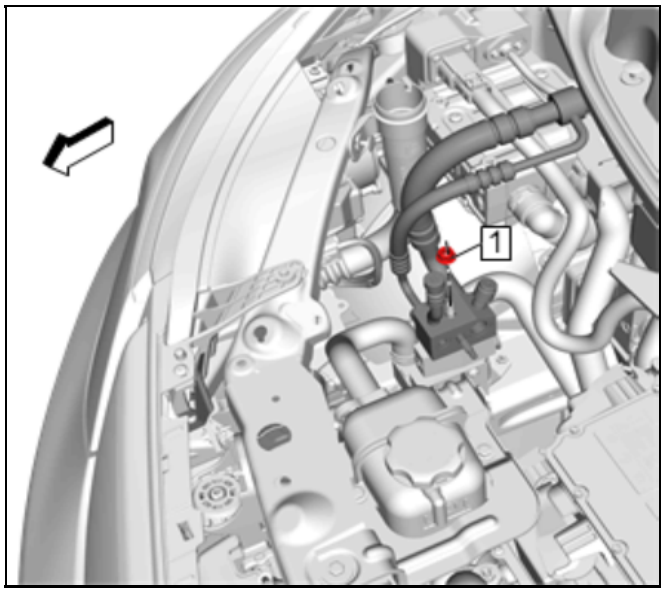
4530295

4. Remove the air conditioning compressor hose nut (1) and reposition the compressor hose (2) and the condenser hose from the air conditioning evaporator hose. *Air Conditioning Condenser Hose Replacement on page 5-35*



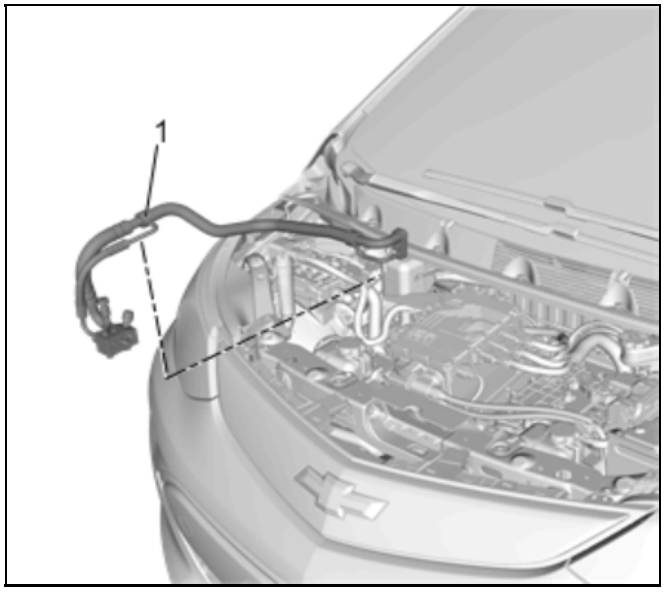
4530283

5. Remove the air conditioning evaporator hose nut (1) and remove the air conditioning evaporator hose (2) from TXV stud.



4530281

6. Remove the air conditioning evaporator hose nut (1).

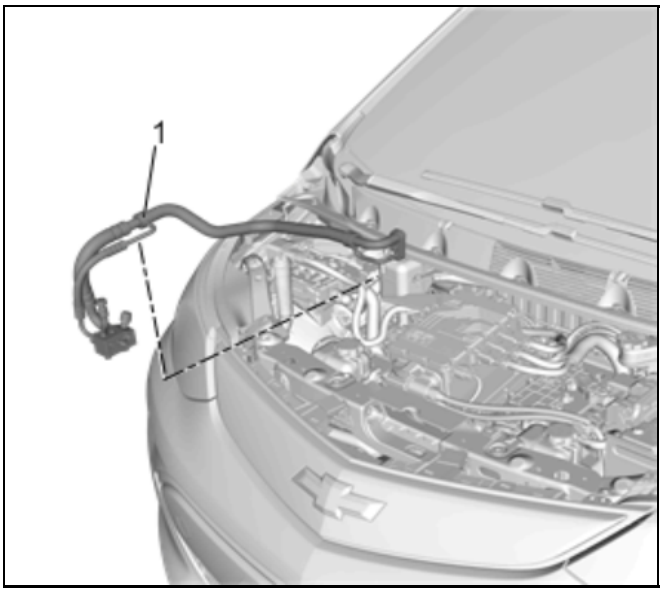


4530280

7. Remove the air conditioning evaporator hose (1) from the vehicle.

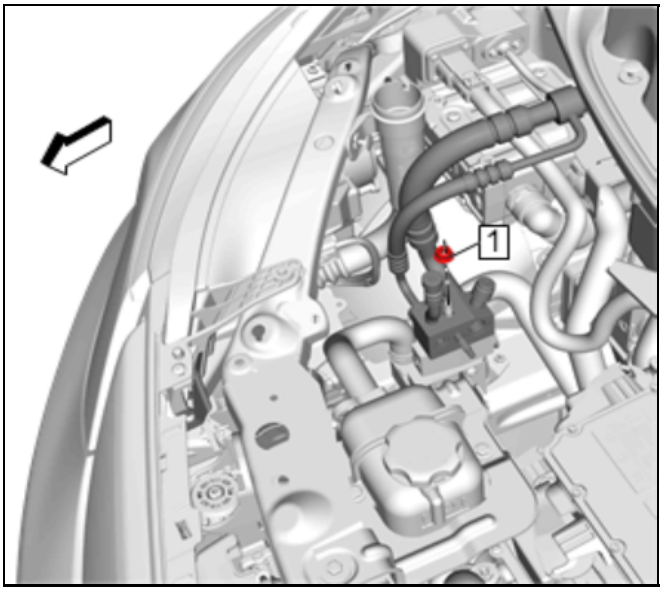
Installation Procedure

1. Change the air conditioning sealing washer. *Air Conditioning System Seal Replacement on page 5-30*



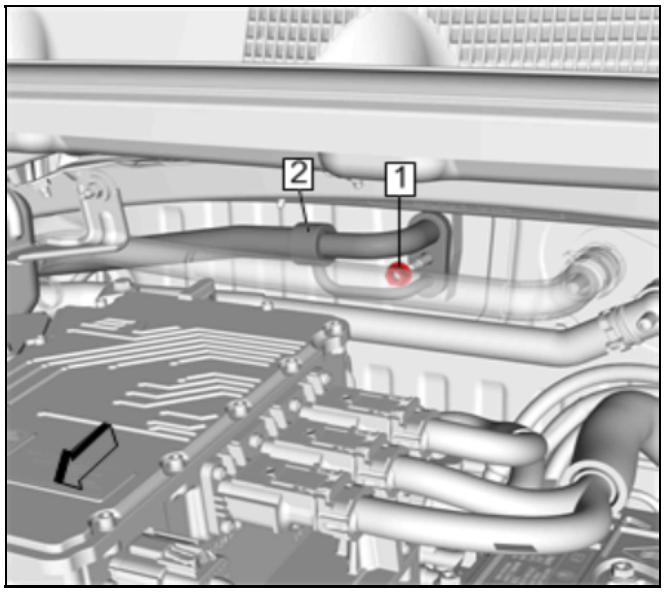
4530280

2. Position the air conditioning evaporator hose (1) to the vehicle.



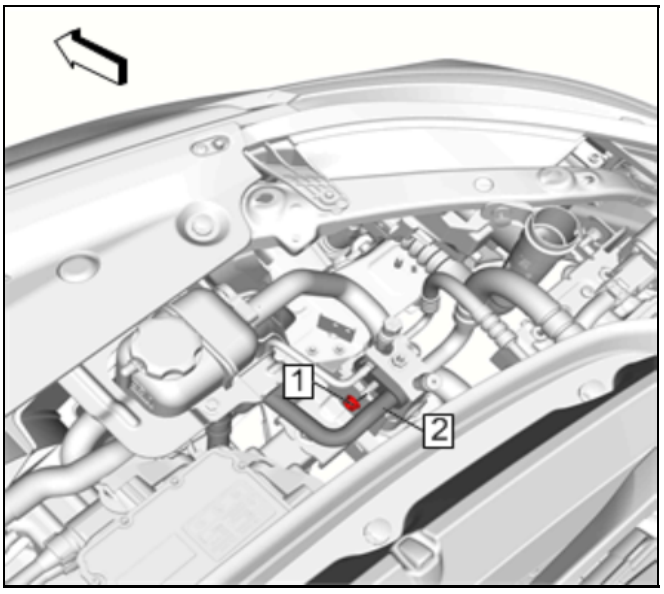
4530281

3. Install the air conditioning evaporator hose and the air conditioning evaporator hose nut (1) and tighten to **22** N•m **(16 lb ft)**.



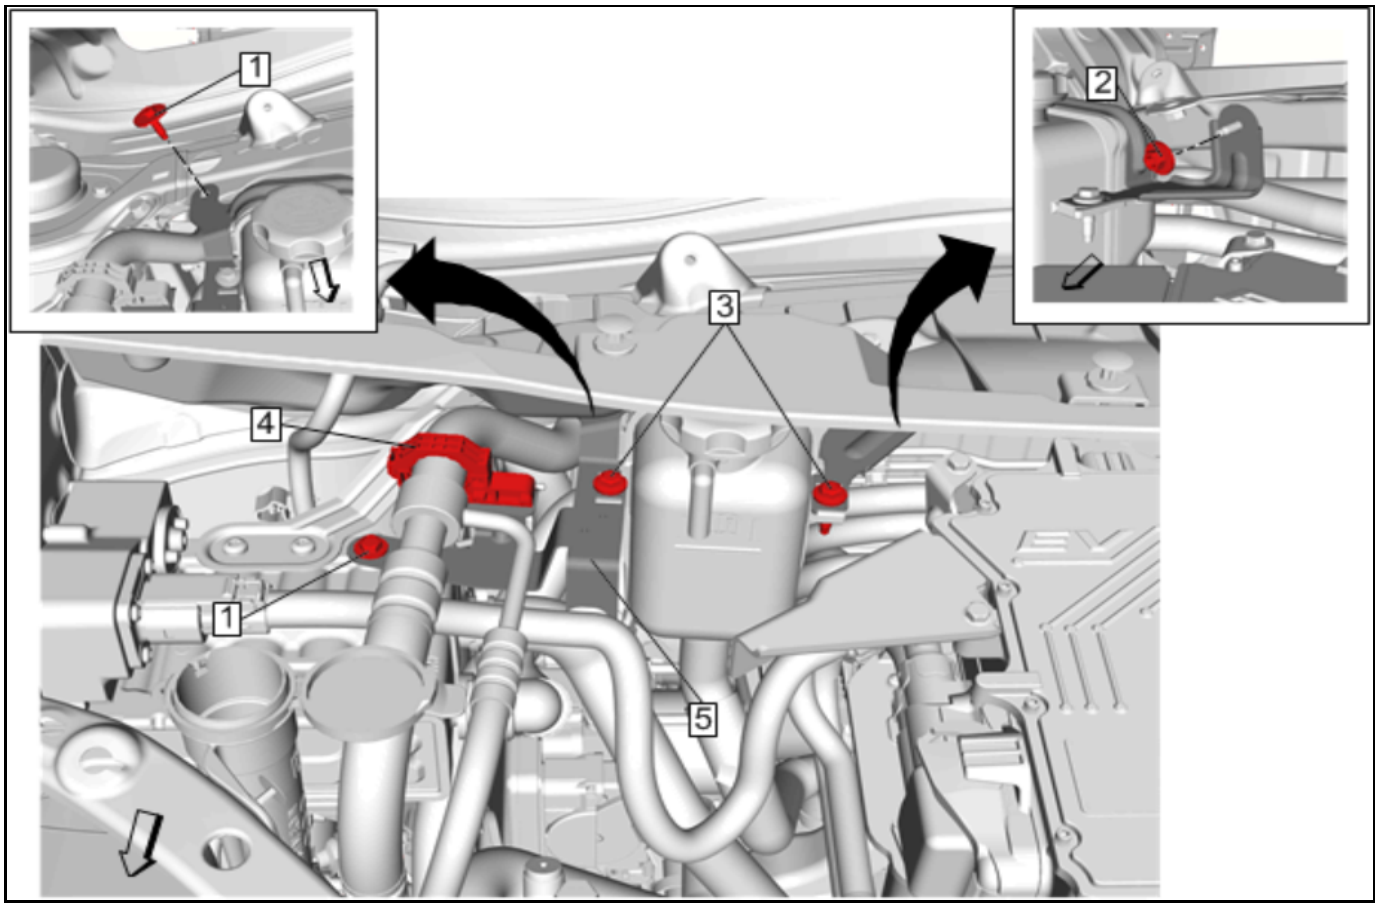
4530283

4. Install the air conditioning evaporator hose (2) and the air conditioning evaporator hose nut (1) and tighten to **22** N•m**(16 lb ft)** .



4530295

5. Position the compressor hose (2) and the condenser hose to the air conditioning evaporator hose and tighten the air conditioning compressor hose nut (1). *Air Conditioning Condenser Hose Replacement on page 5-35*



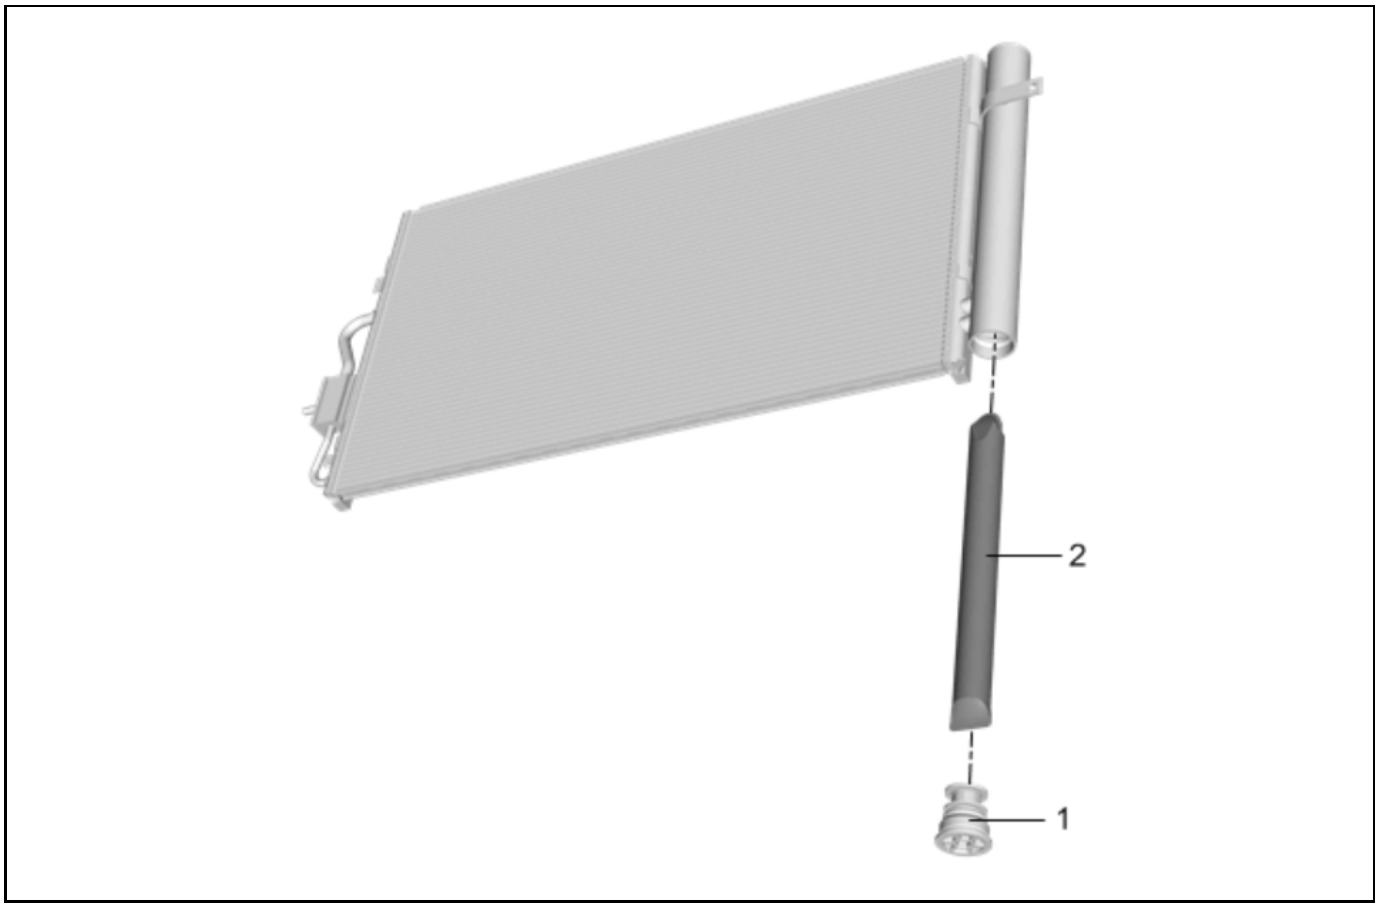
4500142

6. Install the radiator surge tank support bracket (4) — heater.
7. Charge the refrigerant system. *Refrigerant Recovery and Recharging on page 5-18*
8. Connect the battery negative cable.

Air Conditioning Receiver and Dehydrator Replacement

Removal Procedure

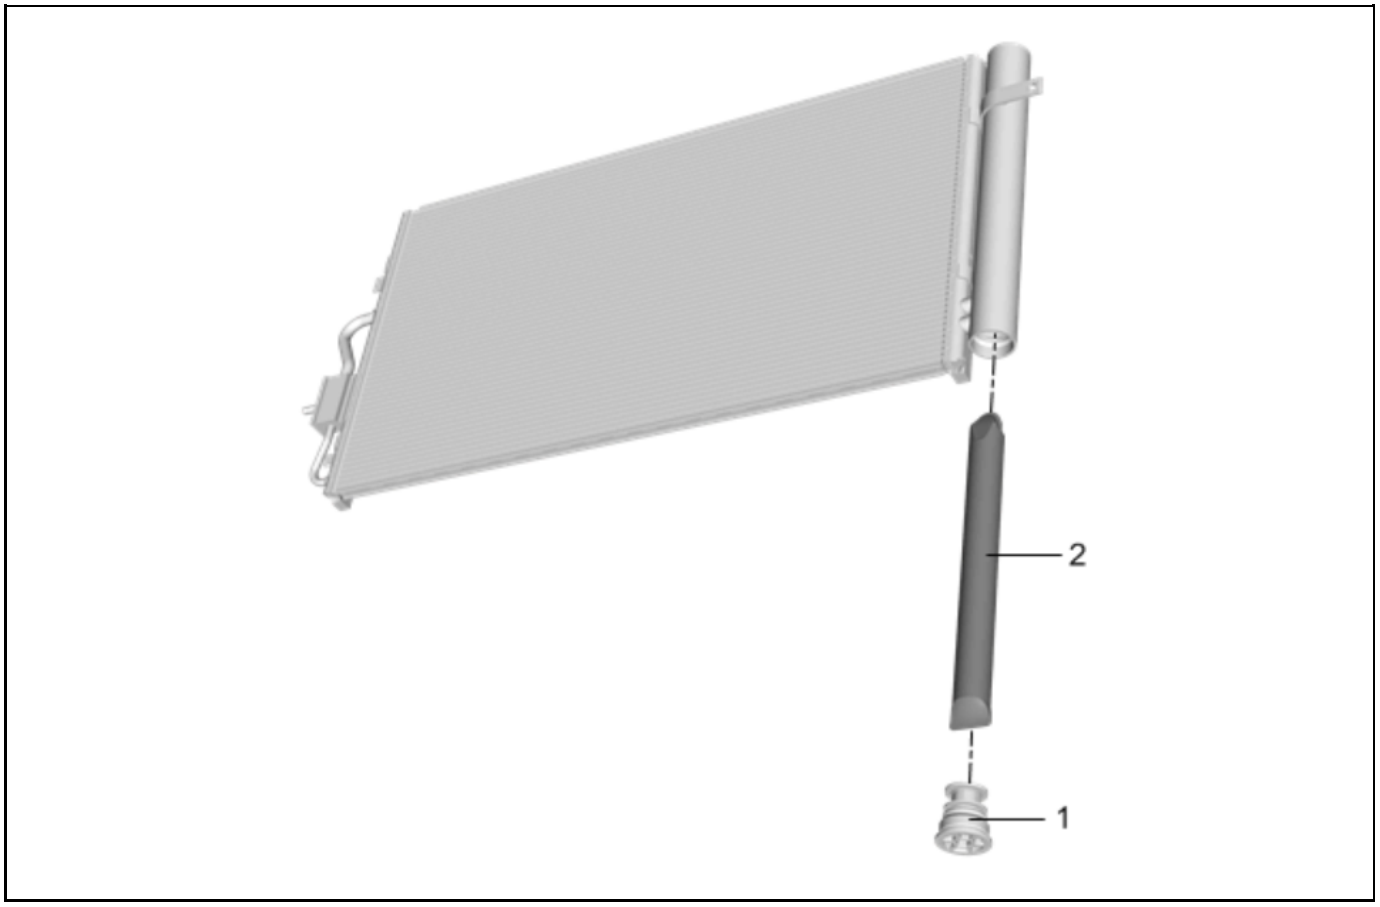
1. Remove the air conditioning condenser. *Air Conditioning Condenser Replacement on page 5-51*



4530277

2. Remove the air conditioning receiver and dehydrator plug (1).
3. Remove and DISCARD the air conditioning receiver and dehydrator plug seal.
4. Remove and DISCARD the air conditioning refrigerant filter (2).

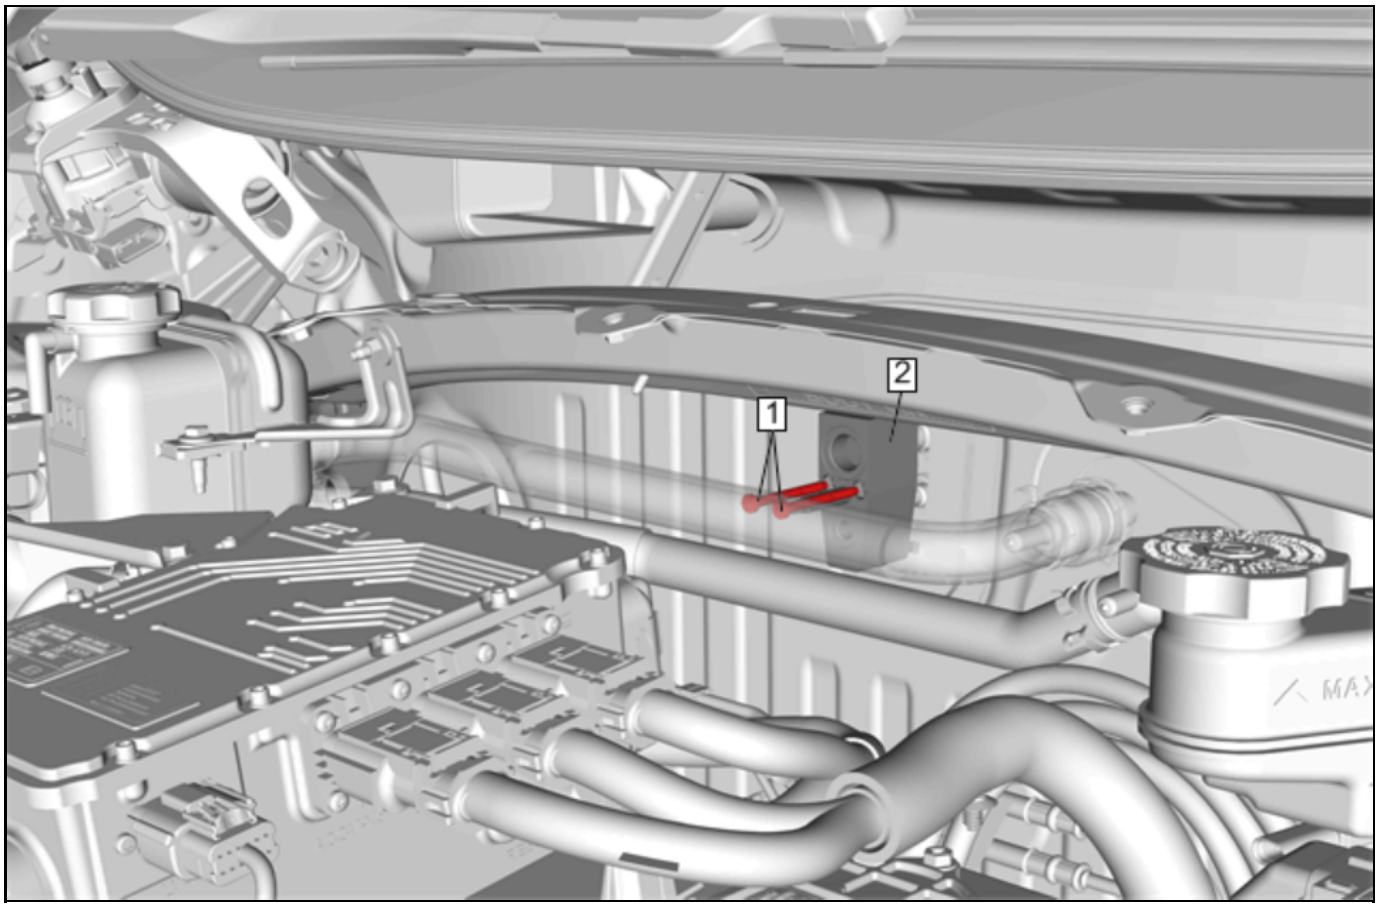
Installation Procedure



4530277

1. Install the NEW air conditioning refrigerant desiccant (2).
2. Install a NEW air conditioning receiver and dehydrator plug seal.
3. Install the air conditioning receiver and dehydrator plug (1).
4. Install the air conditioning condenser. *Air Conditioning Condenser Replacement on page 5-51*

Air Conditioning Evaporator Thermal Expansion Valve Replacement

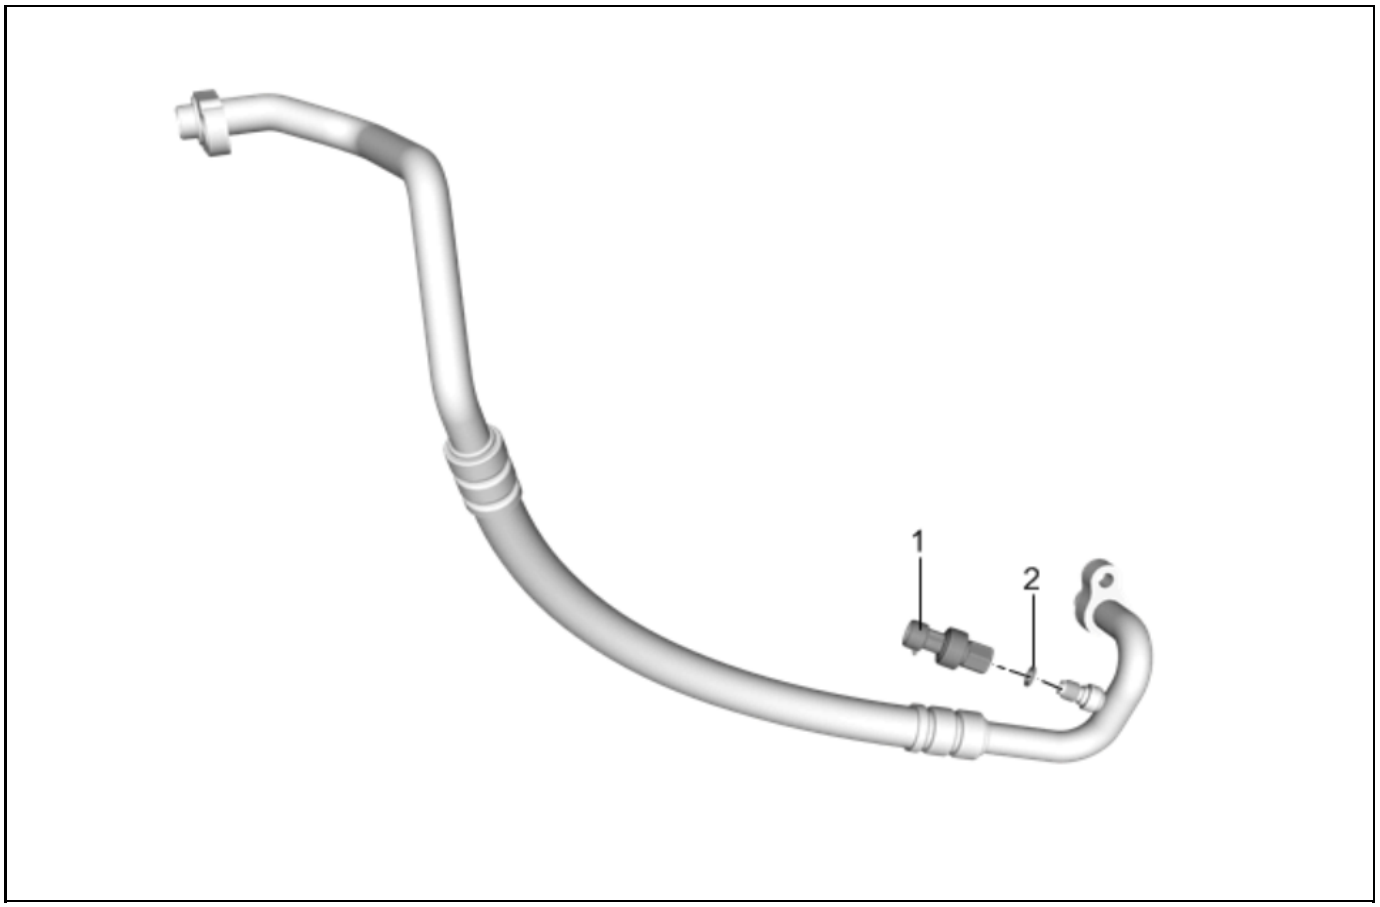


4530276

Air Conditioning Evaporator Thermal Expansion Valve Replacement

Callout	Component Name
Preliminary Procedures 1. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18* 2. Air Conditioning Evaporator Hose @ Air Conditioning Evaporator Thermal Expansion Valve » Remove — *Air Conditioning Evaporator Hose Replacement on page 5-42*	
1	Air Conditioning Evaporator Thermal Expansion Valve Bolt [2x] **Tighten** 7 N•m (62 lb in)
2	Air Conditioning Evaporator Thermal Expansion Valve **Procedure** 1. Remove and DISCARD the old sealing washers. Replace with NEW sealing washers. 2. Evacuate and charge the refrigerant system. *Refrigerant Recovery and Recharging on page 5-18*

Air Conditioning Refrigerant Pressure Sensor Replacement - Low Pressure

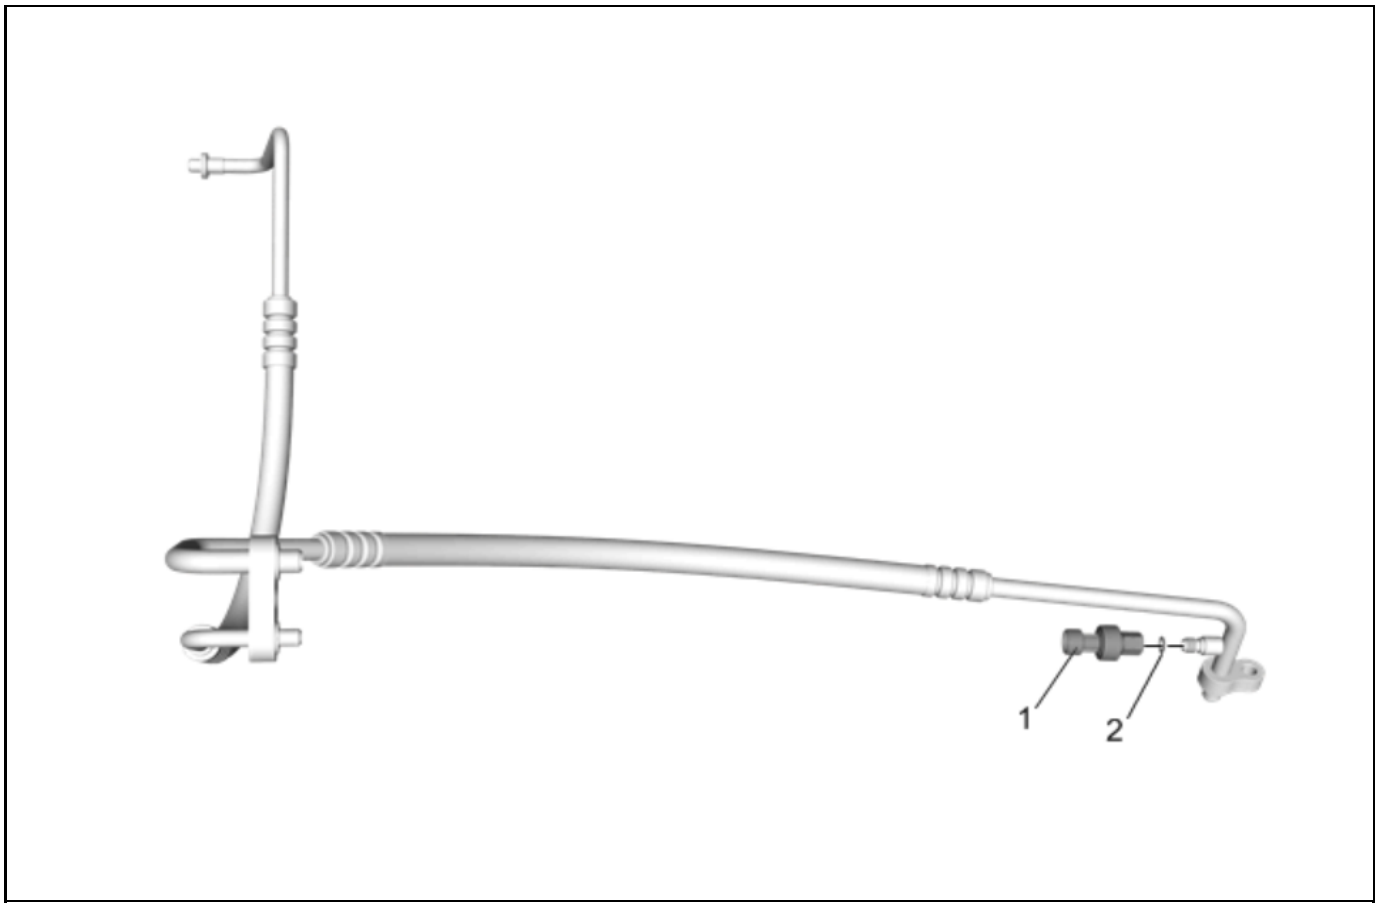


4530286

Air Conditioning Refrigerant Pressure Sensor Replacement - Low Pressure

Callout	Component Name
Danger: Before conducting any repair to this high voltage cooling system, it is necessary to determine/verify whether no high-voltage system faults exist. If high-voltage faults exist, follow published DTC diagnostics/repair procedures prior to performing any cooling system repairs. Failure to correct High Voltage Faults before working on the high voltage cooling system could result in personal injury or death. **Preliminary Procedure** Front Compartment Air Deflector Replacement	
1	Air Conditioning Refrigerant Pressure Sensor **Procedure** Disconnect the electrical connector.
2	Air Conditioning Refrigerant Pressure Sensor O-ring **Note:** Remove and DISCARD the O-ring and replace with NEW only. *Air Conditioning O-Ring Seal Replacement on page 5-30* **Procedure** Recharge the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*

Air Conditioning Refrigerant Pressure Sensor Replacement - High Pressure



4530285

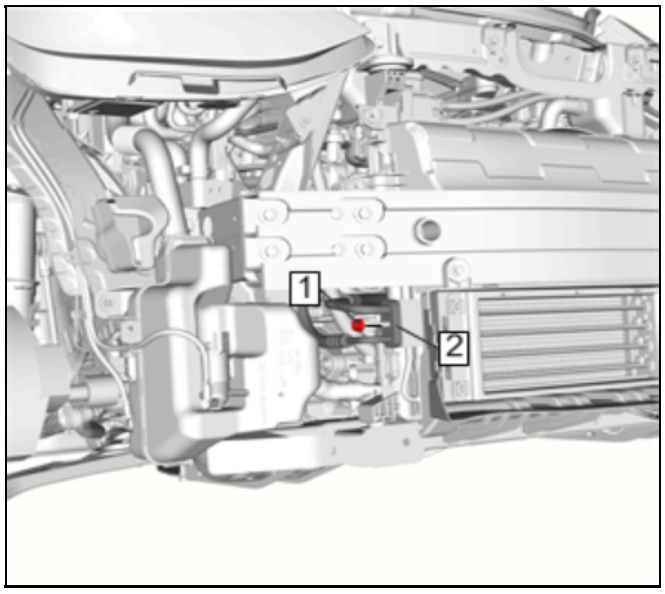
Air Conditioning Refrigerant Pressure Sensor Replacement - High Pressure

Callout	Component Name
Danger: Before conducting any repair to this high voltage cooling system, it is necessary to determine/verify whether no high-voltage system faults exist. If high-voltage faults exist, follow published DTC diagnostics/repair procedures prior to performing any cooling system repairs. Failure to correct High Voltage Faults before working on the high voltage cooling system could result in personal injury or death. **Preliminary Procedure** Remove the left front wheelhouse liner.	
1	Air Conditioning Refrigerant Pressure Sensor **Procedure** Disconnect the electrical connector.
2	Air Conditioning Refrigerant Pressure Sensor O-ring **Note:** Remove and DISCARD the O-ring and replace with NEW only. *Air Conditioning O-Ring Seal Replacement on page 5-30* **Procedure** Recharge the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*

Air Conditioning Condenser Replacement

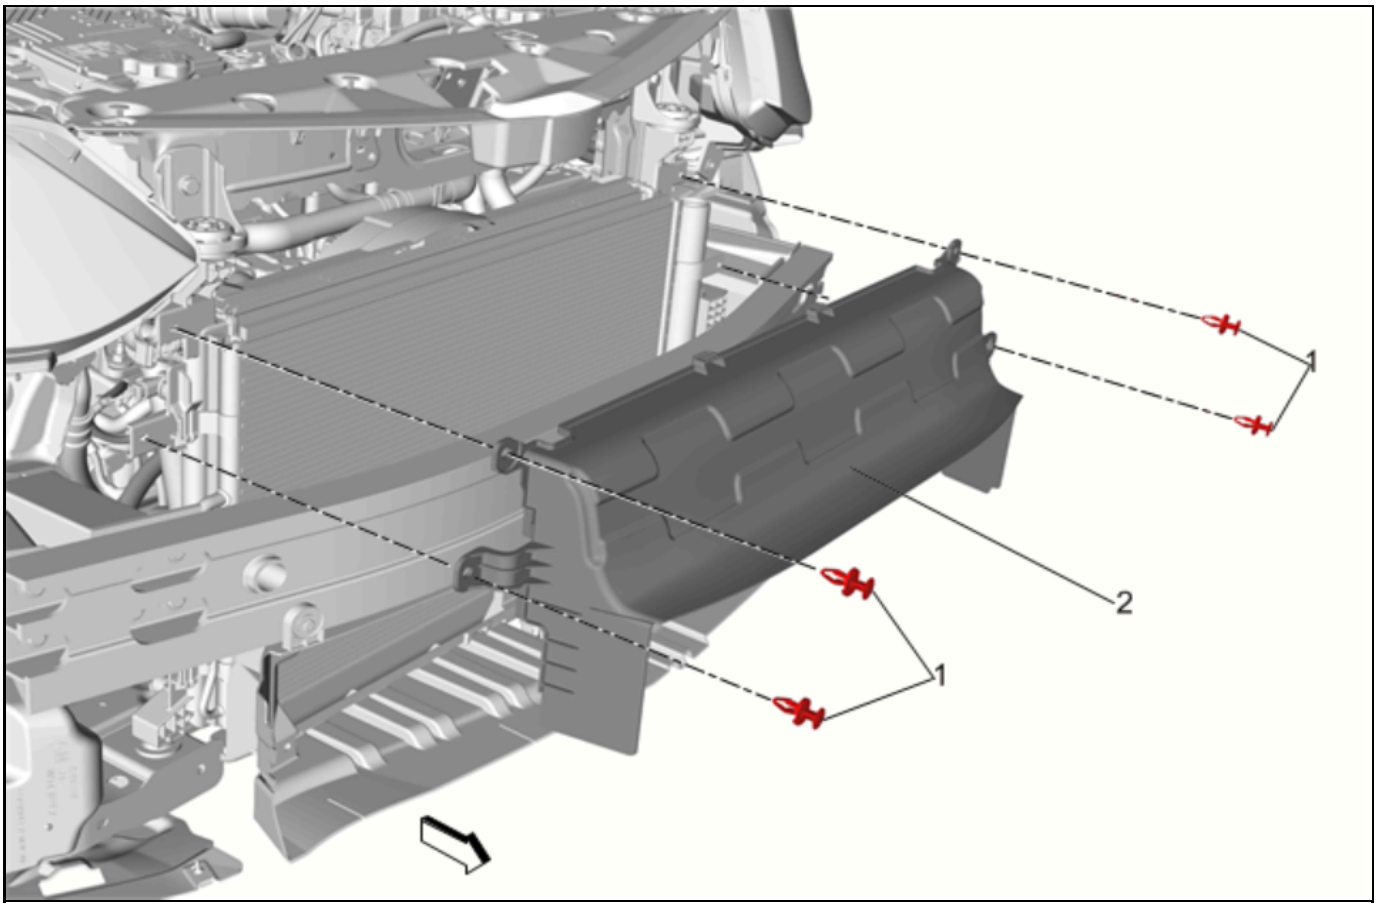
Removal Procedure

1. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*



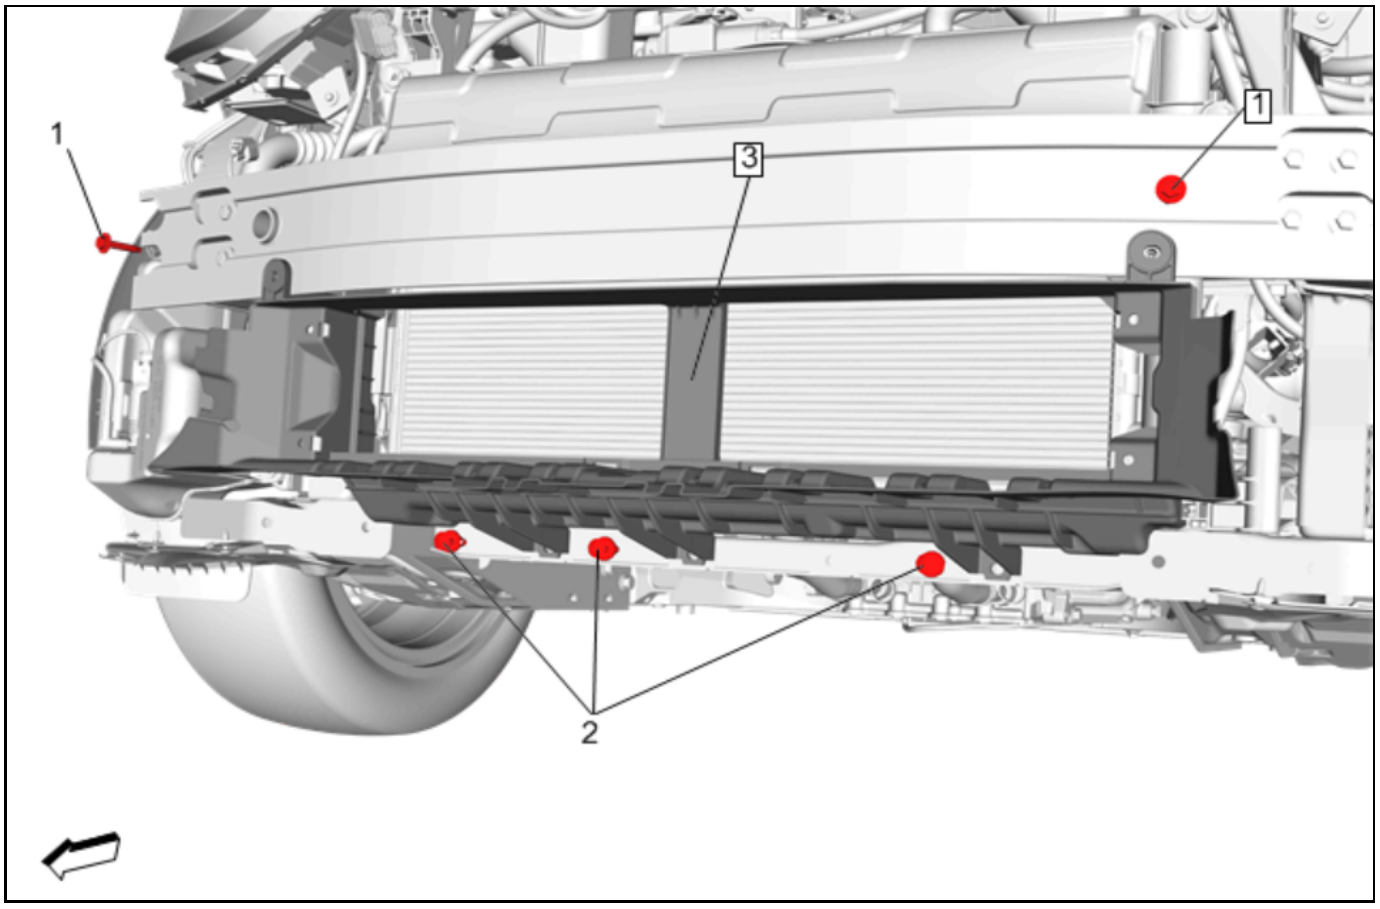
4530290

2. Air Conditioning Condenser Hose (2)@ Air Conditioning Condenser Assembly» Remove — *Air Conditioning Condenser Hose Replacement on page 5-35*



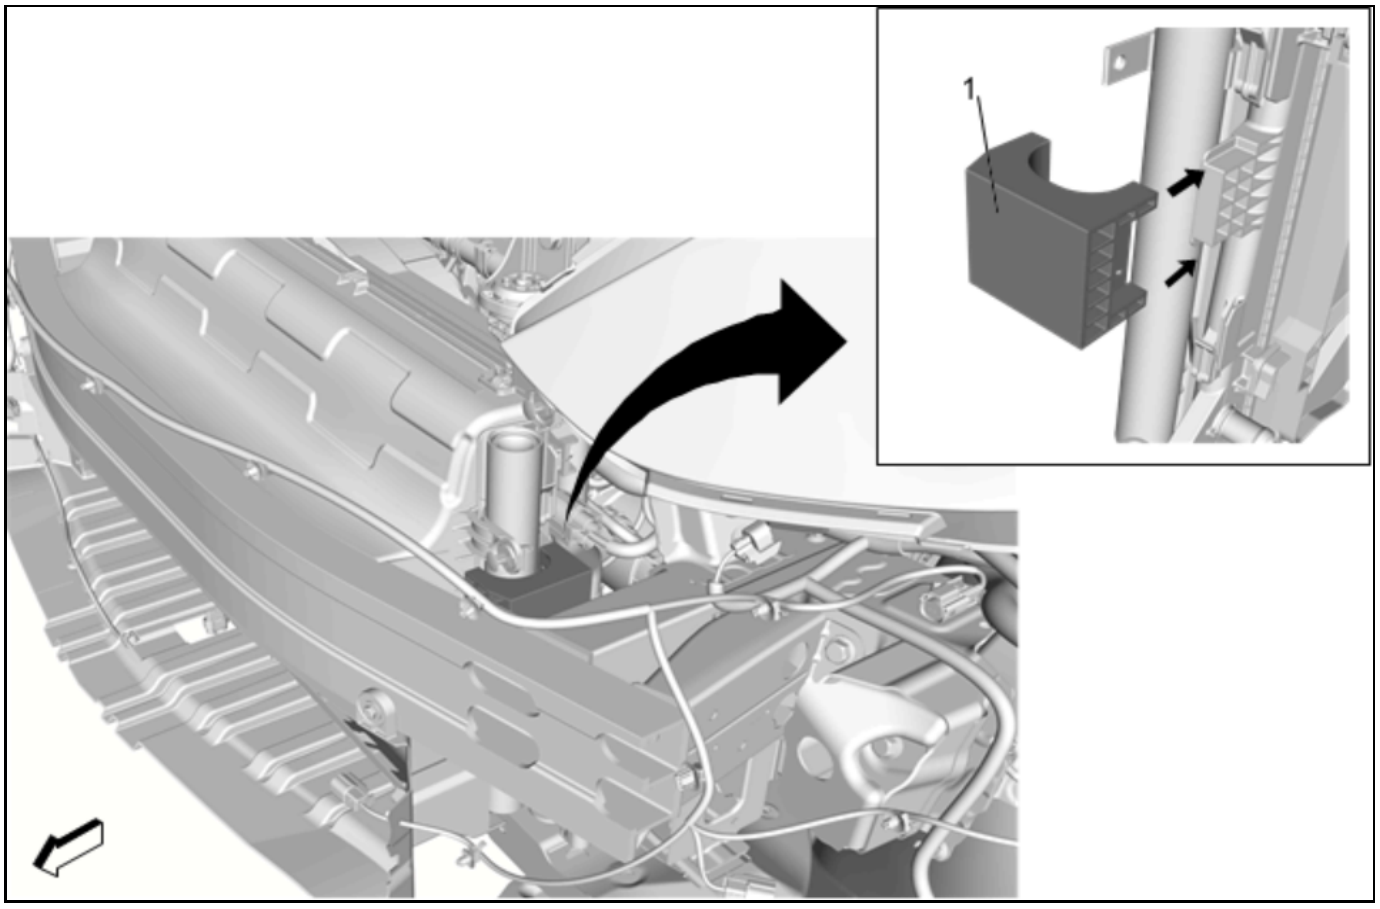
4502460

3. Radiator Air Upper Baffle and Deflector (2) » Remove — Radiator Air Upper Baffle and Deflector Replacement



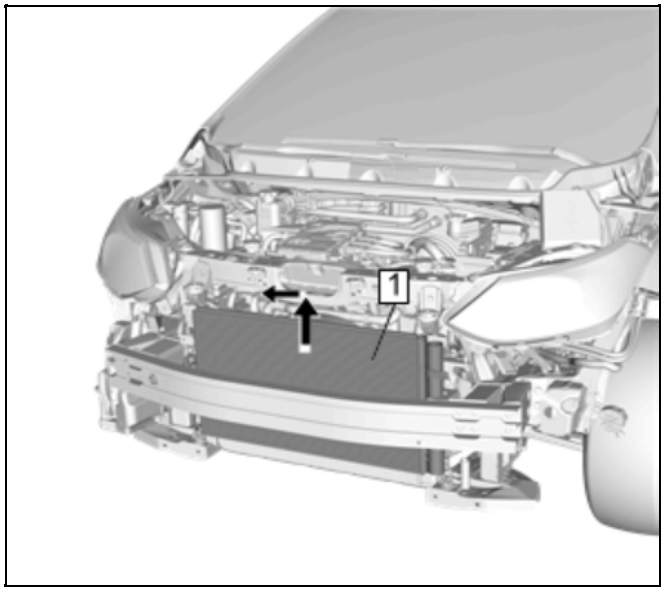
4502457

4. Radiator Air Lower Baffle and Deflector (3) » Remove — Radiator Air Lower Baffle and Deflector Replacement



4503277

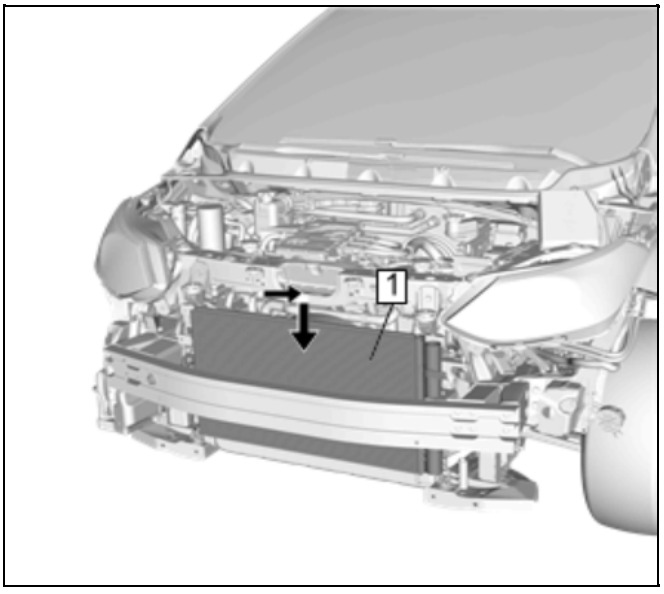
5. Remove the radiator protector (1).



4530279

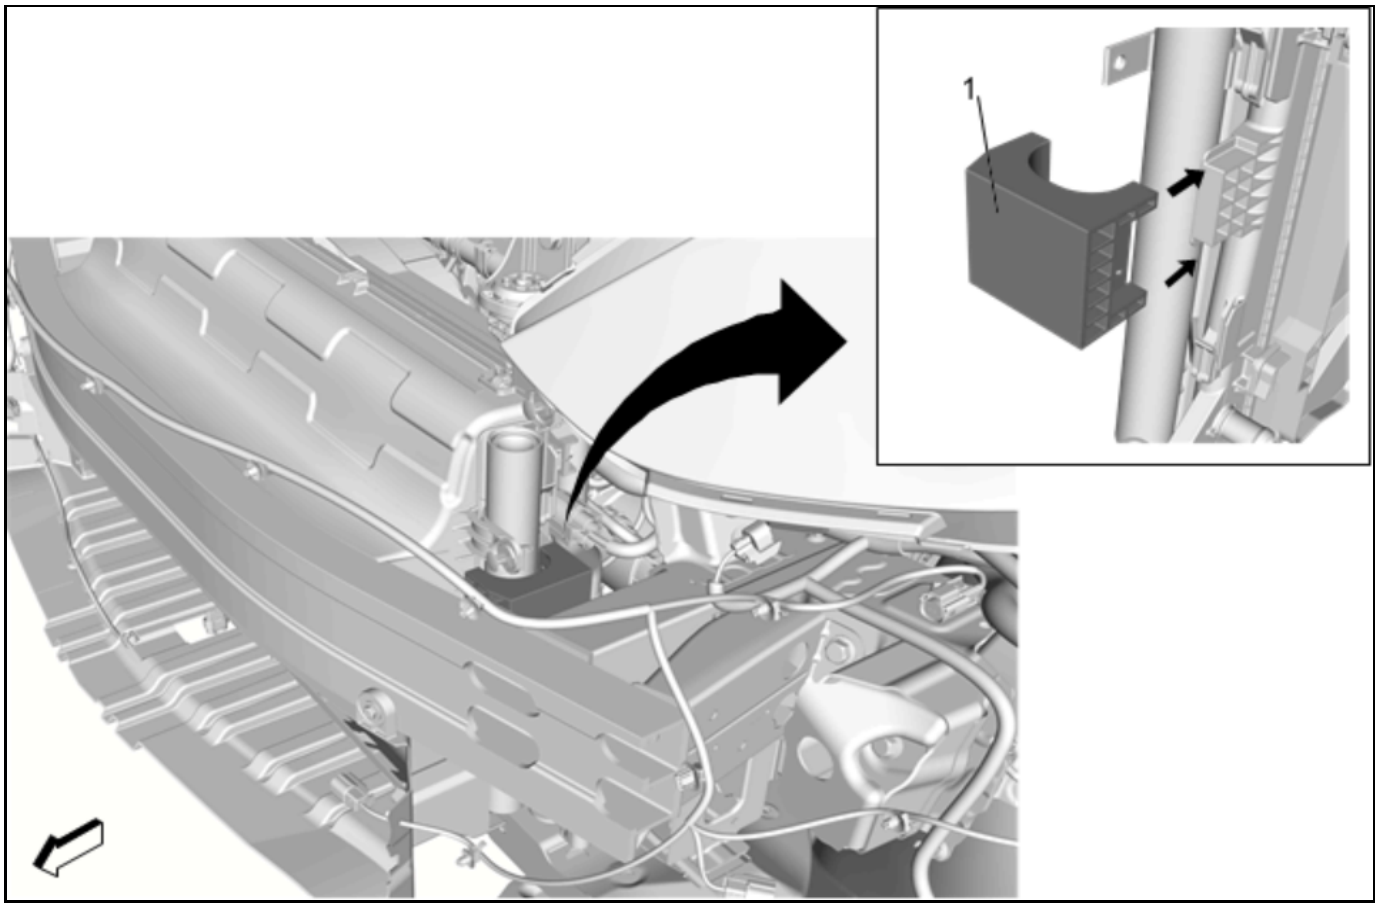
6. Air Conditioning Condenser (1) @ Air Conditioning Condenser Bracket » Remove

Installation Procedure



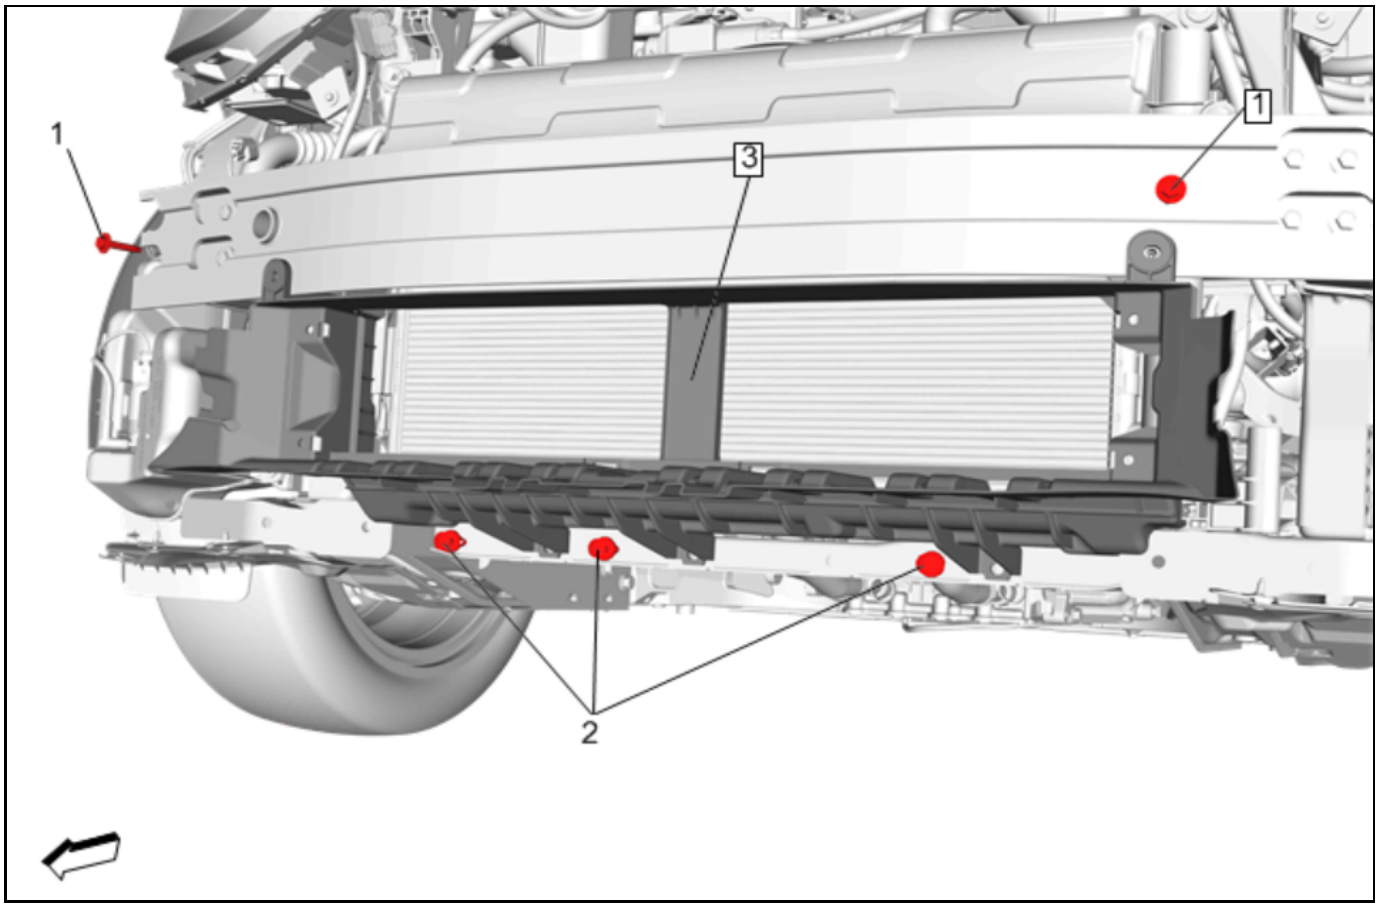
4530278

1. Air Conditioning Condenser (1) @ Air Conditioning Condenser Bracket » Install



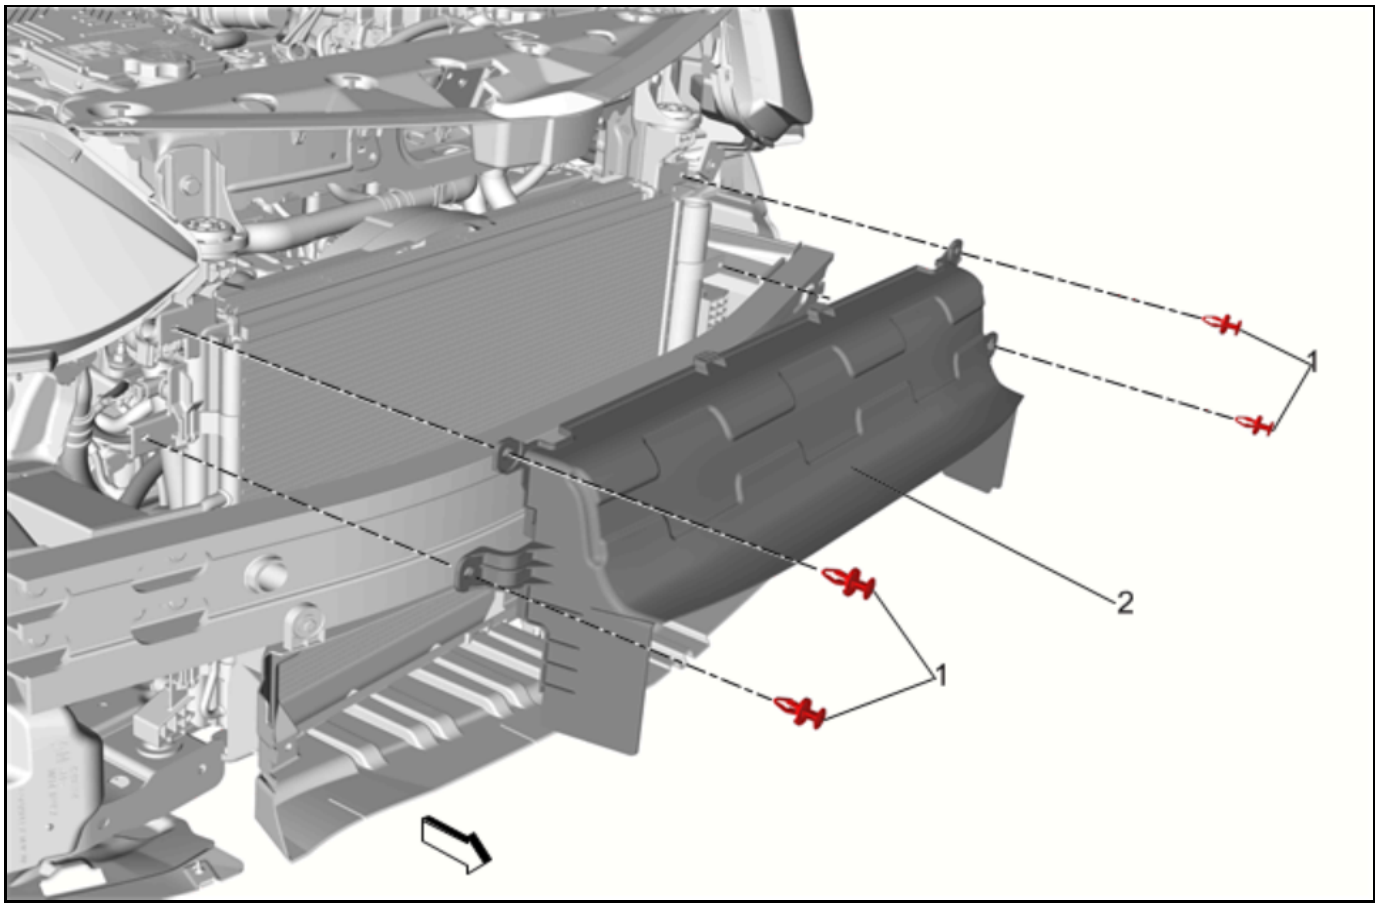
4503277

2. Install the radiator protector (1).



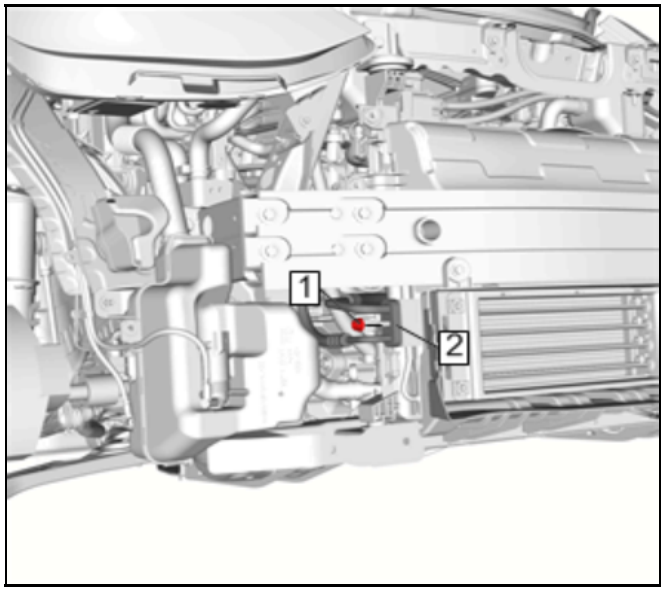
4502457

3. Radiator Air Lower Baffle and Deflector (3) »
   Install — Radiator Air Lower Baffle and Deflector Replacement



4502460

4. Radiator Air Upper Baffle and Deflector (2) » Install — Radiator Air Upper Baffle and Deflector Replacement



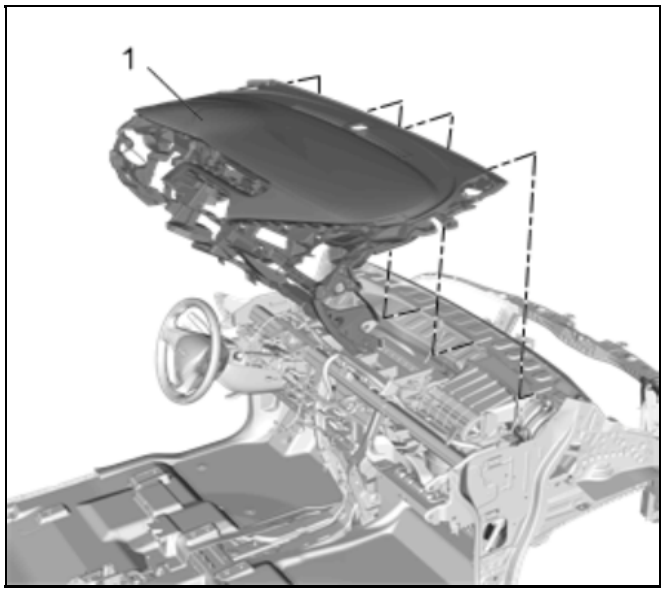
4530290

5. Air Conditioning Condenser Hose (2)@ Air Conditioning Condenser Assembly» Install — *Air Conditioning Condenser Hose Replacement on page 5-35*
6. Recharge the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*

Heater and Air Conditioning Evaporator and Blower Module Removal and Installation

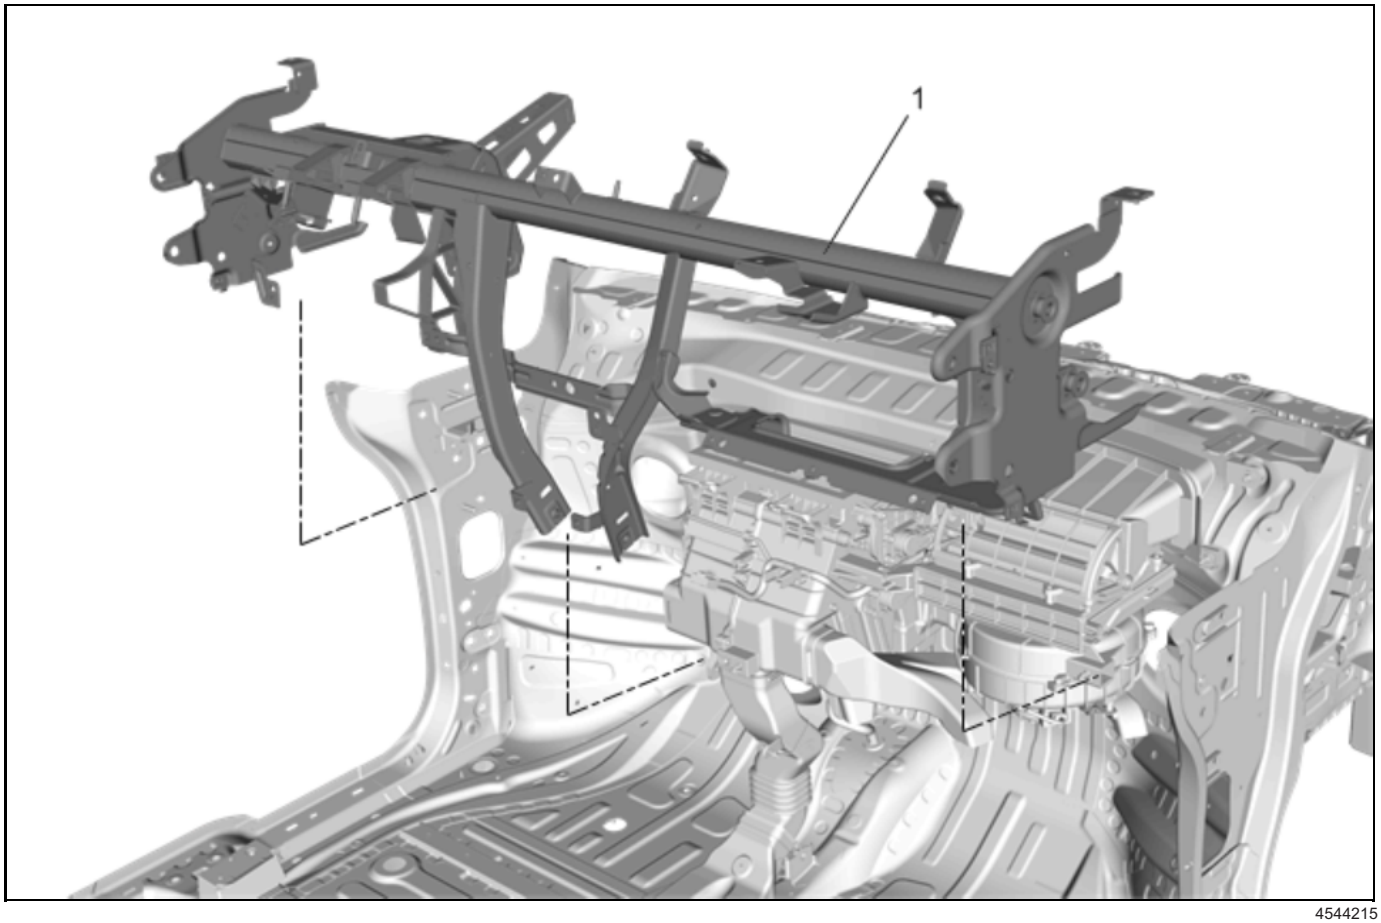
Removal Procedure

1. Disconnect the battery negative cable.
2. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*
3. Drain the cooling system. *Heater Coolant Heater Draining and Filling on page 5-22*
4. Heater Inlet Hose @ Heater Core Tube » Remove — *Heater Inlet Hose Replacement on page 5-86*
5. Heater Outlet Hose @ Heater Core Tube » Remove — *Heater Outlet Hose Replacement on page 5-95*
6. Air Conditioning Evaporator Hose Assembly @ Air Conditioning Evaporator Thermal Expansion Valve » Remove — *Air Conditioning Evaporator Hose Replacement on page 5-42*



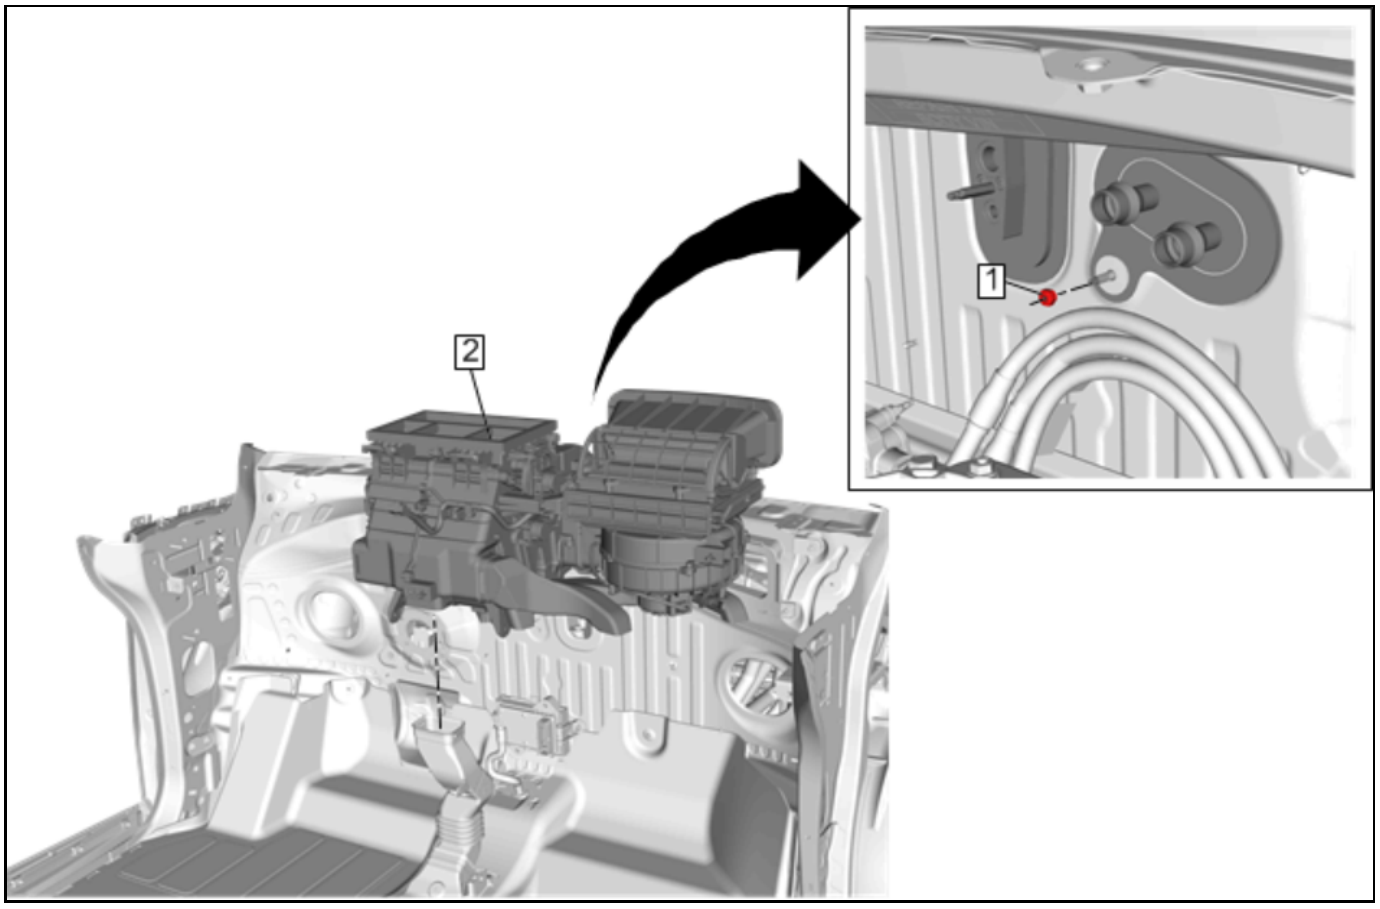
4542638

7. Instrument Panel Assembly (1) » Remove — Instrument Panel Assembly Replacement



4544215

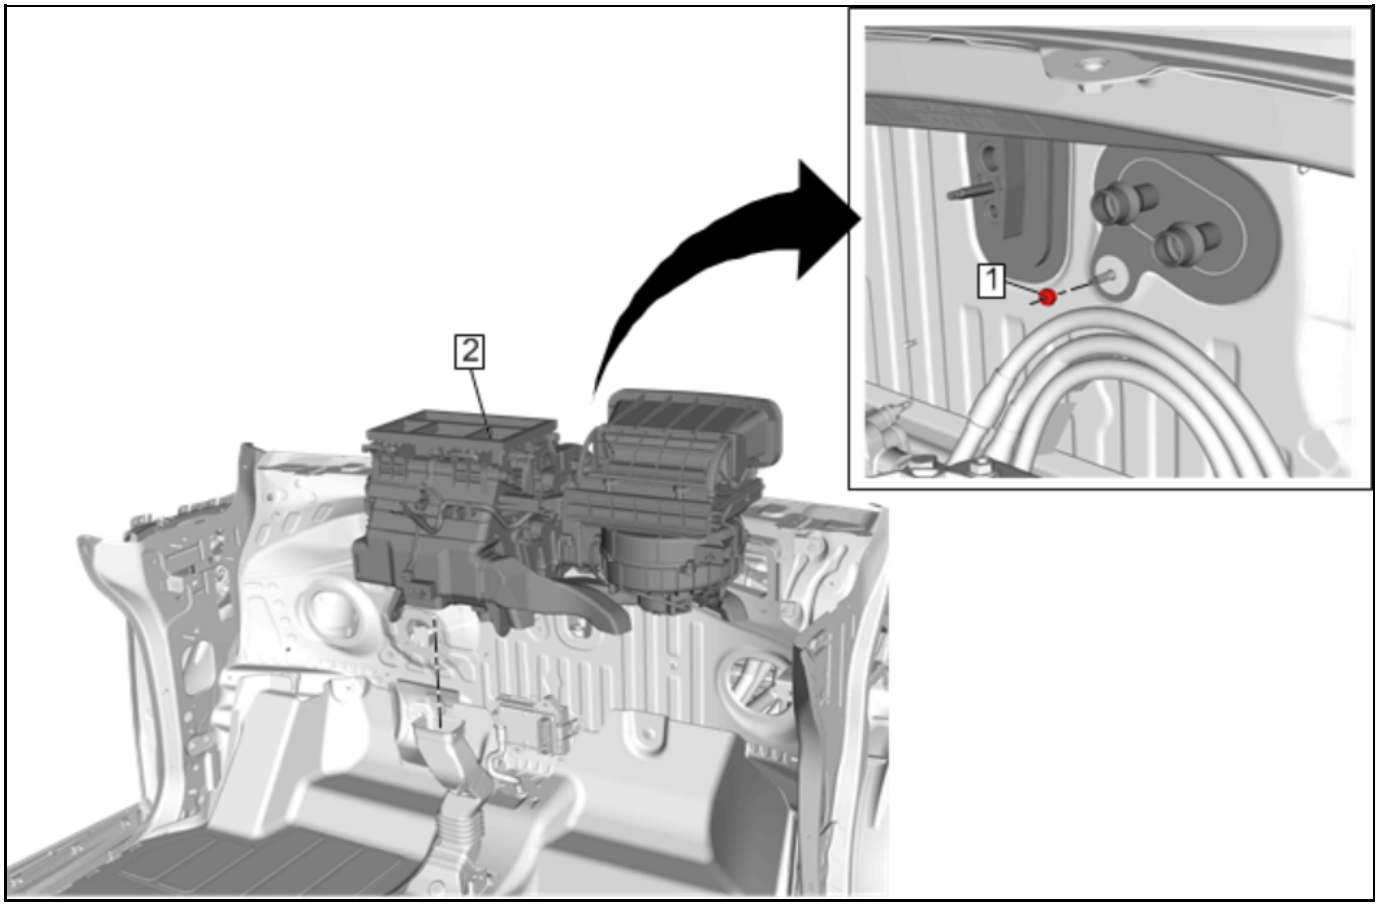
8. Instrument Panel Tie Bar (1) » Remove — Instrument Panel Tie Bar Replacement
9. Air Conditioning Evaporator and Blower Module Drain Hose » Remove — *Air Conditioning Evaporator and Blower Module Drain Hose Replacement on page 5-86*
10. Floor Front Air Outlet Duct» Remove — *Floor Front Air Outlet Duct Replacement on page 5-110*
11. Disconnect and unclip the electrical.
12. Cap the heater core tube to prevent spillage.



4544229

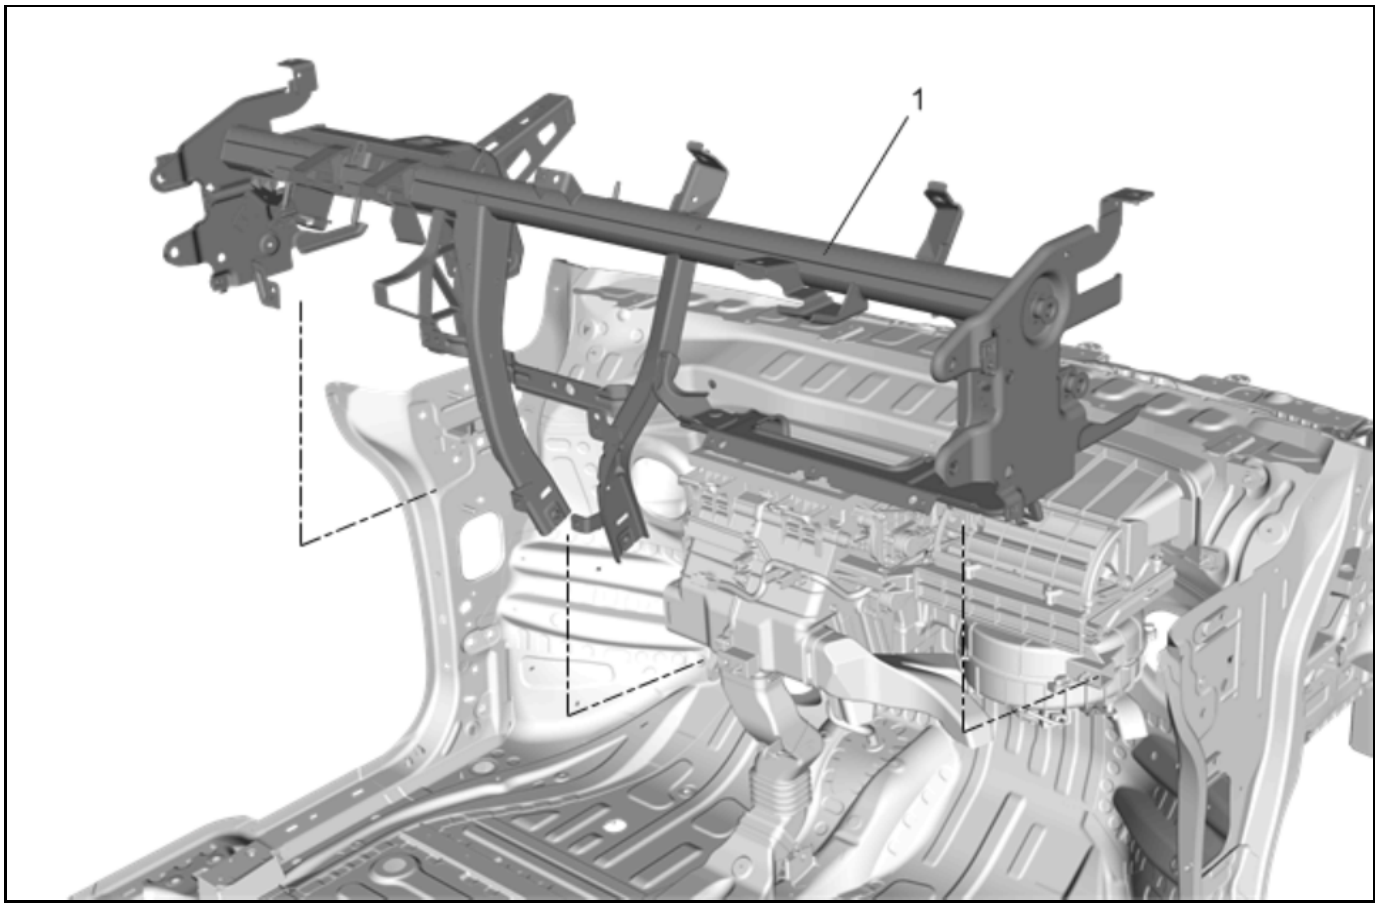
13. From within the engine compartment, remove the heater and air conditioning evaporator and blower module nut (1) securing the heater and air conditioning evaporator and blower module to the cowl panel.
14. Heater and Air Conditioning Evaporator and Blower Module (2) » Remove
15. Transfer components as necessary.

Installation Procedure



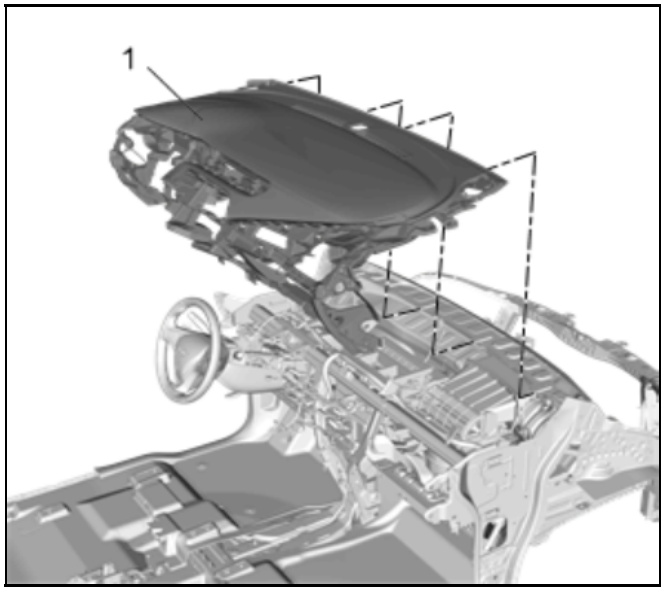
4544229

1. Position the Heater and Air Conditioning Evaporator and Blower Module (2) into the vehicle and temporarily support it.
2. From within the engine compartment, install the heater and air conditioning evaporator and blower module nut (1) securing the heater and air conditioning evaporator and blower module to the cowl panel, and tighten to **9** N•m**(80 lb in)** .
3. Uncap the heater core tube.
4. Connect and clip the electrical.
5. Floor Front Air Outlet Duct» Install — *Floor Front Air Outlet Duct Replacement on page 5-110*
6. Air Conditioning Evaporator and Blower Module Drain Hose » Install — *Air Conditioning Evaporator and Blower Module Drain Hose Replacement on page 5-86*



4544215

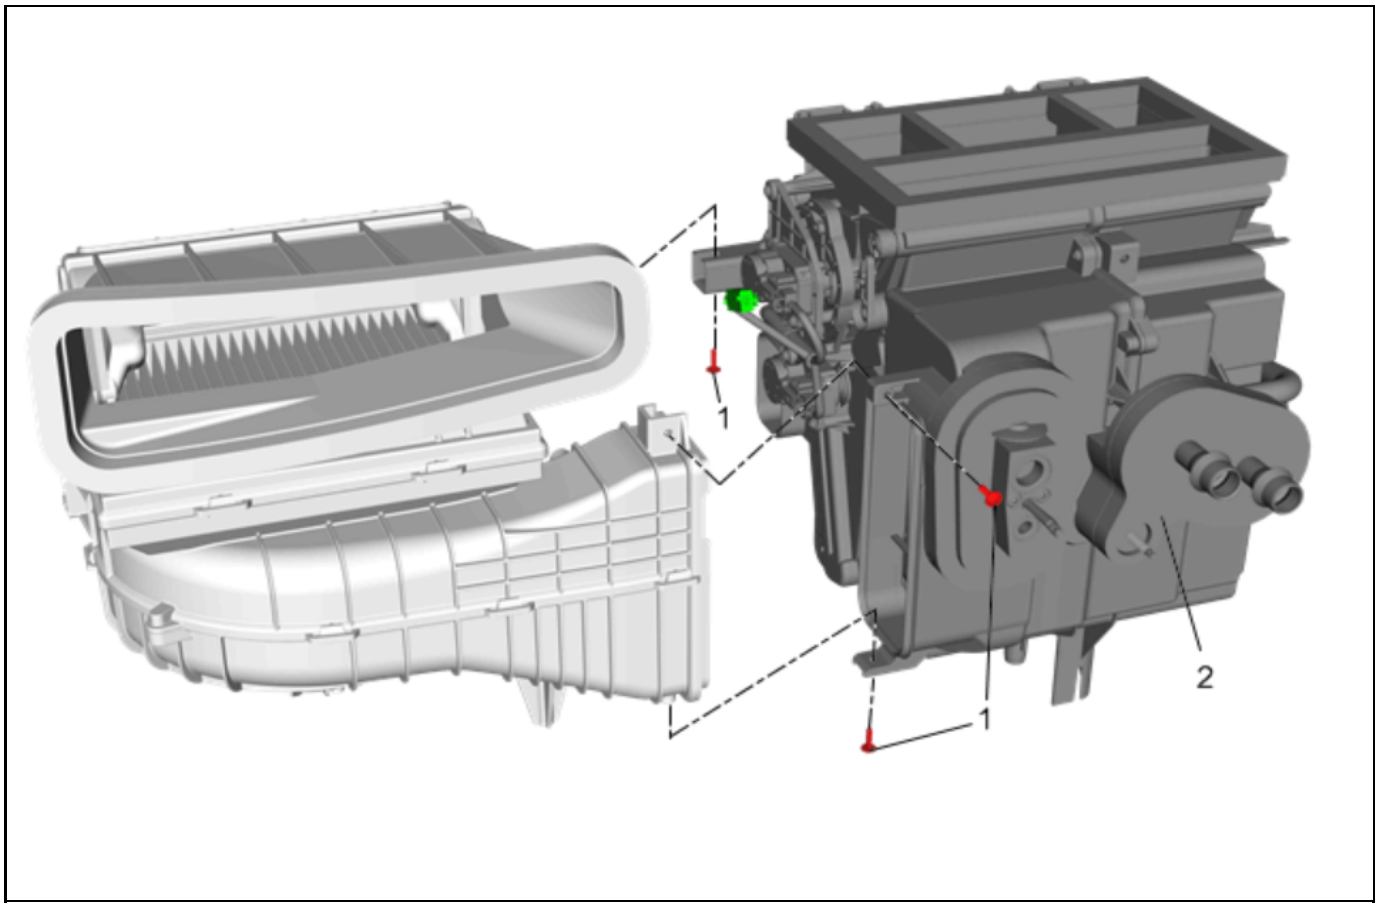
7. Instrument Panel Tie Bar (1) » Install — Instrument Panel Tie Bar Replacement



4542638

8. Instrument Panel Assembly (1) » Install — Instrument Panel Assembly Replacement
9. Air Conditioning Evaporator Hose Assembly @ Air Conditioning Evaporator Thermal Expansion Valve » Install — *Air Conditioning Evaporator Hose Replacement on page 5-42*
10. Heater Outlet Hose @ Heater Core Tube » Install — *Heater Outlet Hose Replacement on page 5-95*
11. Heater Inlet Hose @ Heater Core Tube » Install — *Heater Inlet Hose Replacement on page 5-86*
12. Connect the battery negative cable.
13. Fill the cooling system to the proper level. *Heater Coolant Heater Draining and Filling on page 5-22*
14. Evacuate and charge the refrigerant system. *Refrigerant Recovery and Recharging on page 5-18*
15. Perform the actuator calibration procedure.
16. Clear the DTCs.
17. Inspect for coolant leaks.
18. Inspect for refrigerant leaks.

Heater and Air Conditioning Evaporator Case Replacement



4544257

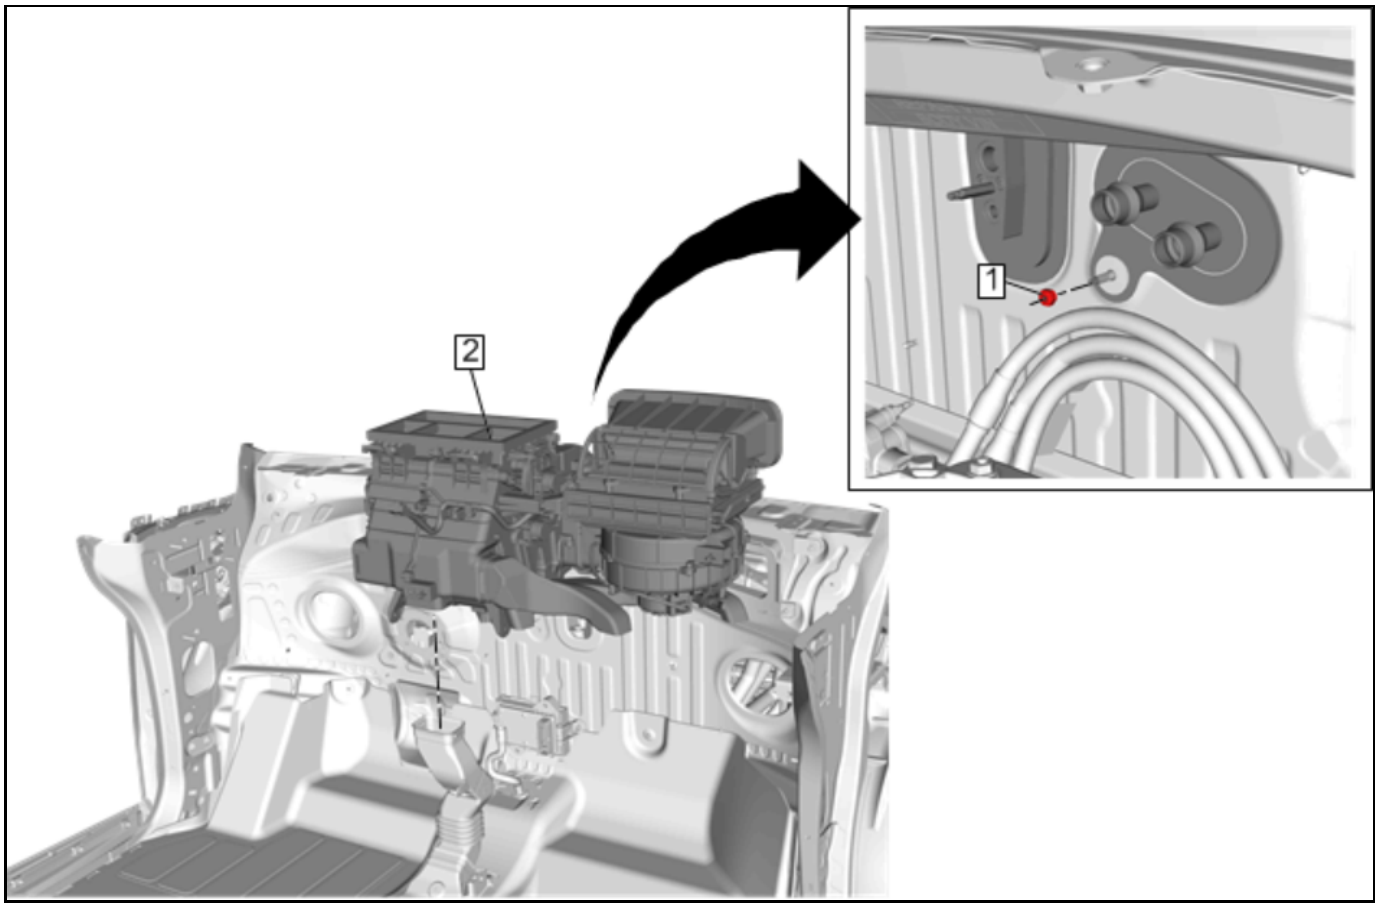
Heater and Air Conditioning Evaporator Case Replacement

Callout	Component Name
Preliminary Procedures 1. Drain the heater coolant heater system. *Heater Coolant Heater Draining and Filling on page 5-22* 2. Remove the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57*	
1	Heater and Air Conditioning Evaporator Case Screw [3x] **Tighten** 2.5 N•m(22 lb in)
2	Heater and Air Conditioning Evaporator Case **Procedure** 1. Disconnect the electrical connector. 2. Install the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57* 3. Fill the heater coolant heater system. *Heater Coolant Heater Draining and Filling on page 5-22*

Blower Lower Case Replacement

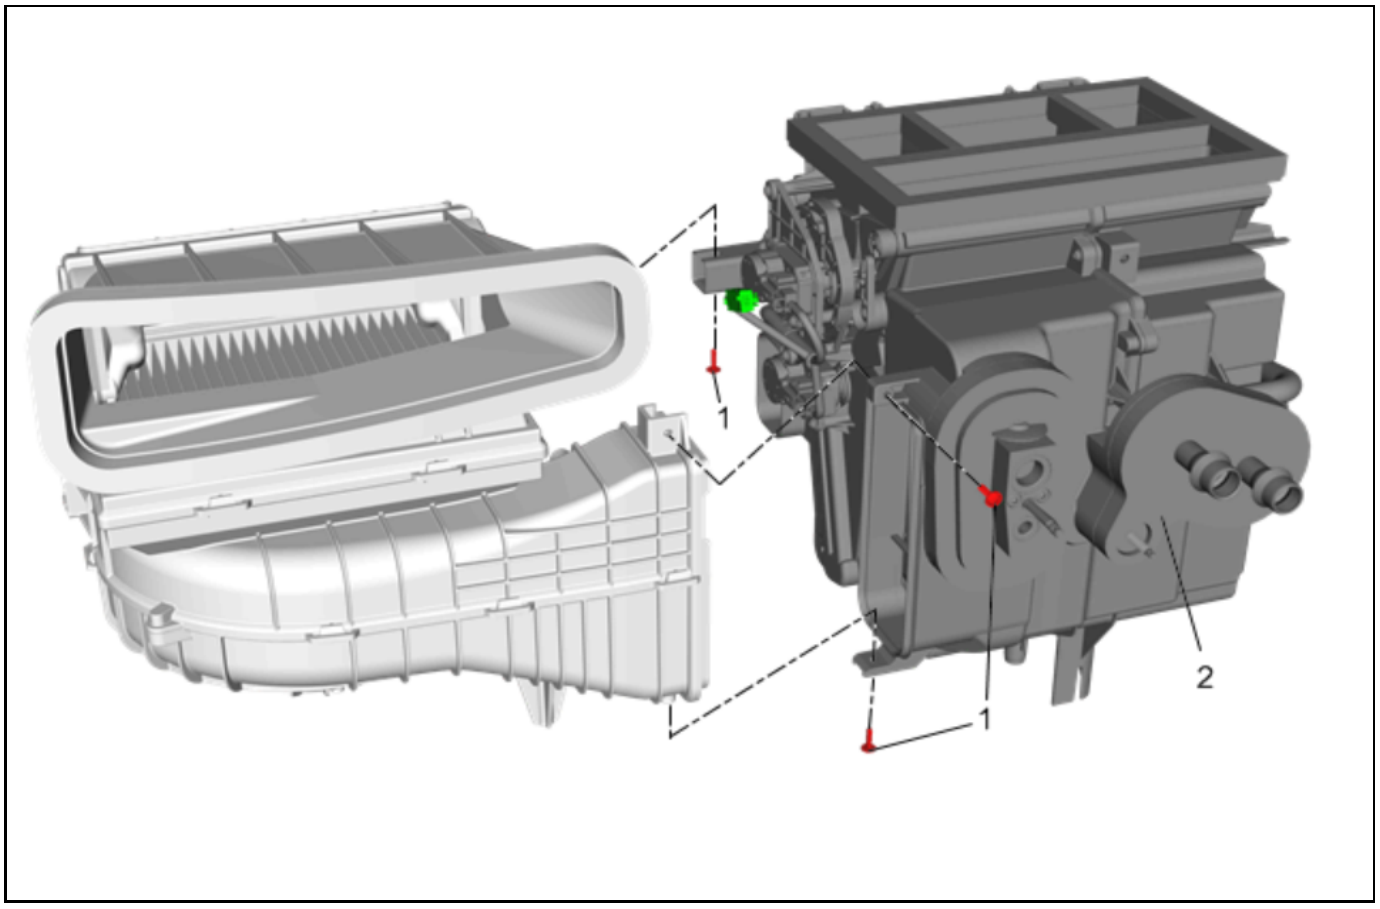
Removal Procedure

1. Disconnect the battery negative cable.
2. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*



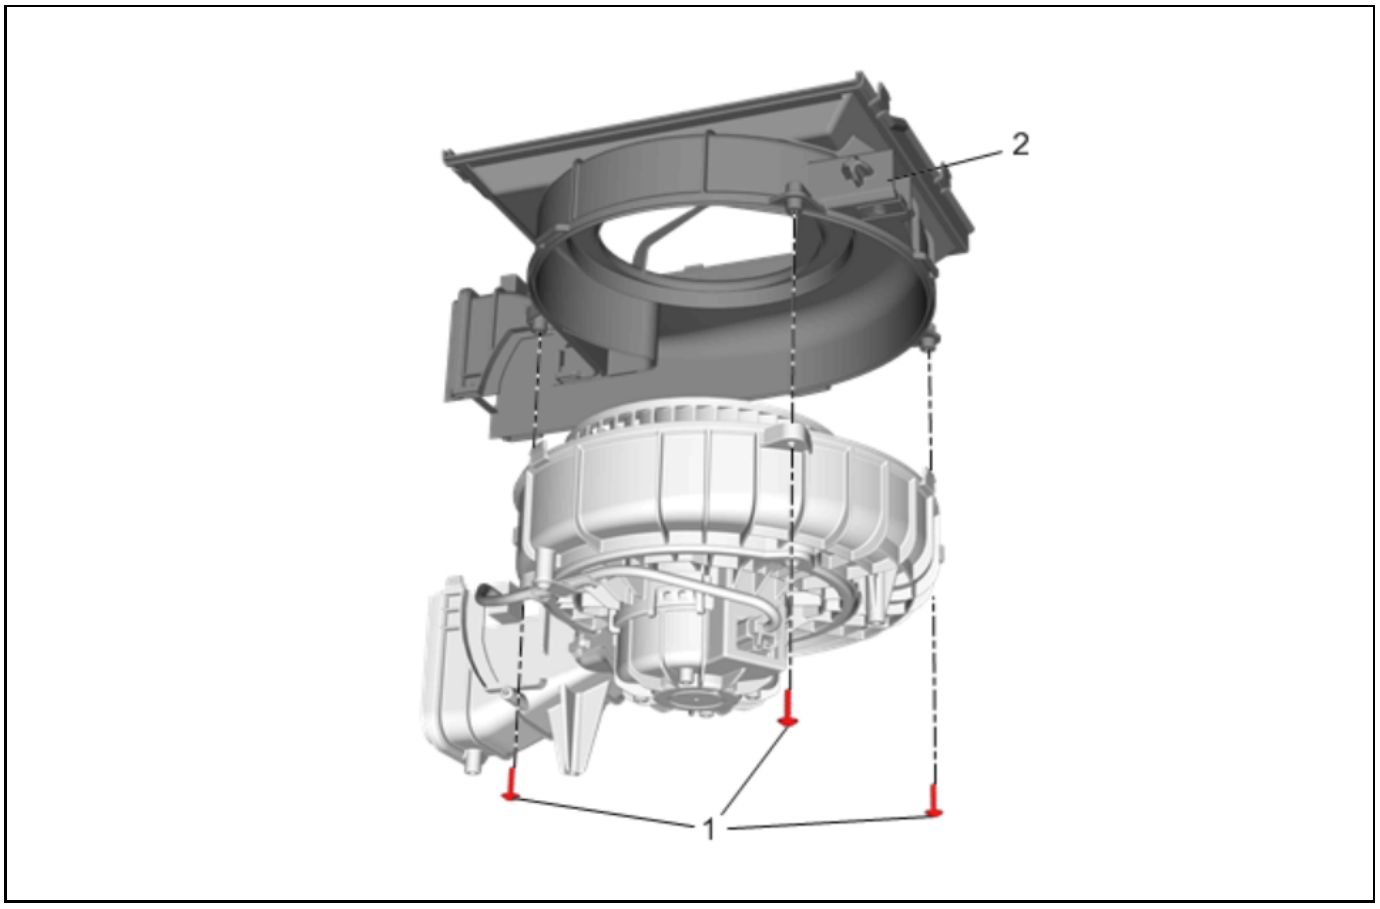
4544229

3. Heater and Air Conditioning Evaporator and Blower Module (2) » Remove — *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57*



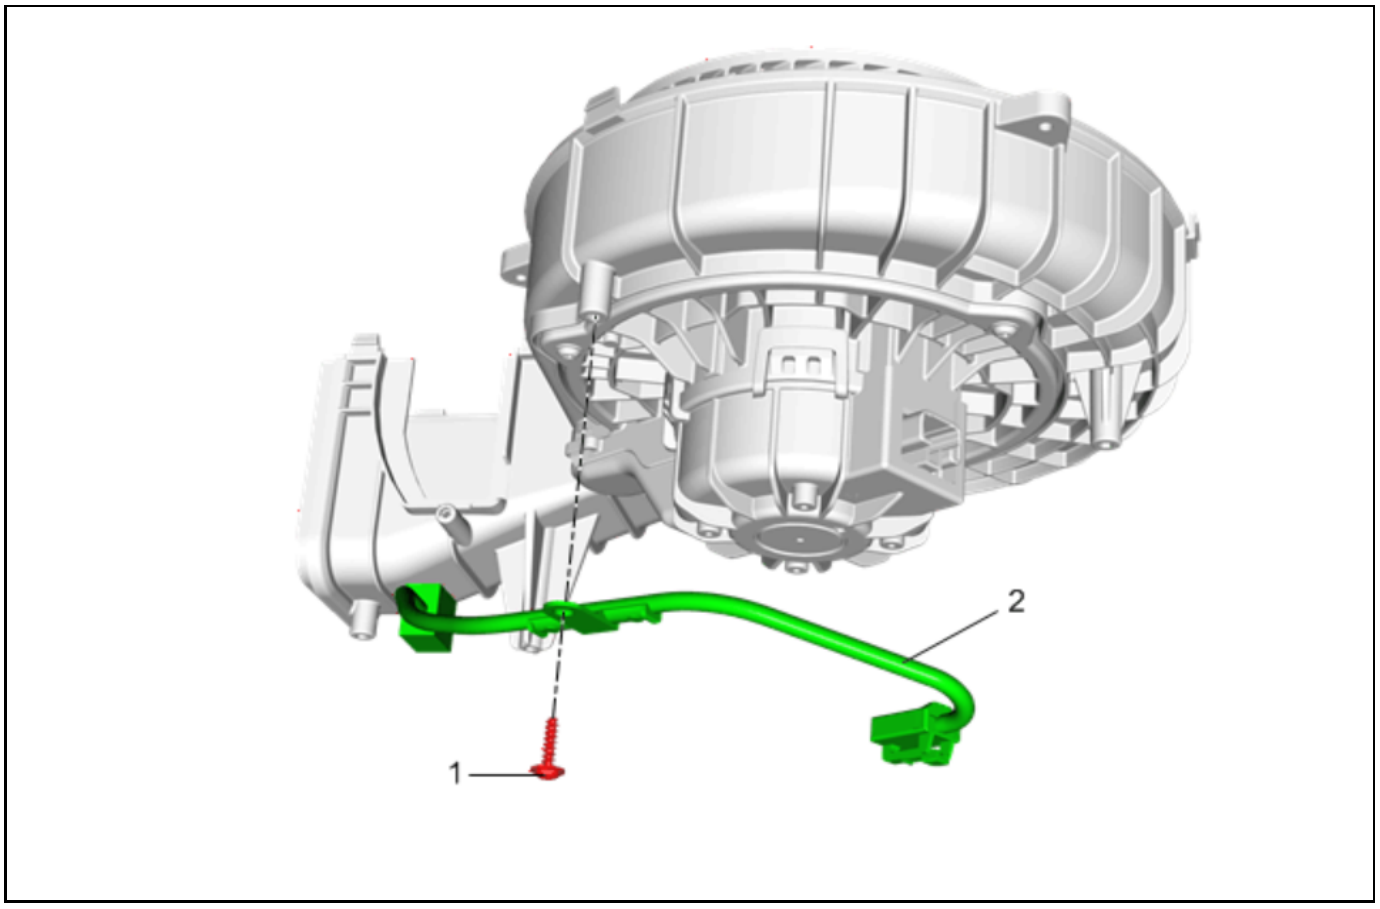
4544257

4. Heater and Air Conditioning Evaporator Case (2)
   » Remove — *Heater and Air Conditioning Evaporator Case Replacement on page 5-62*



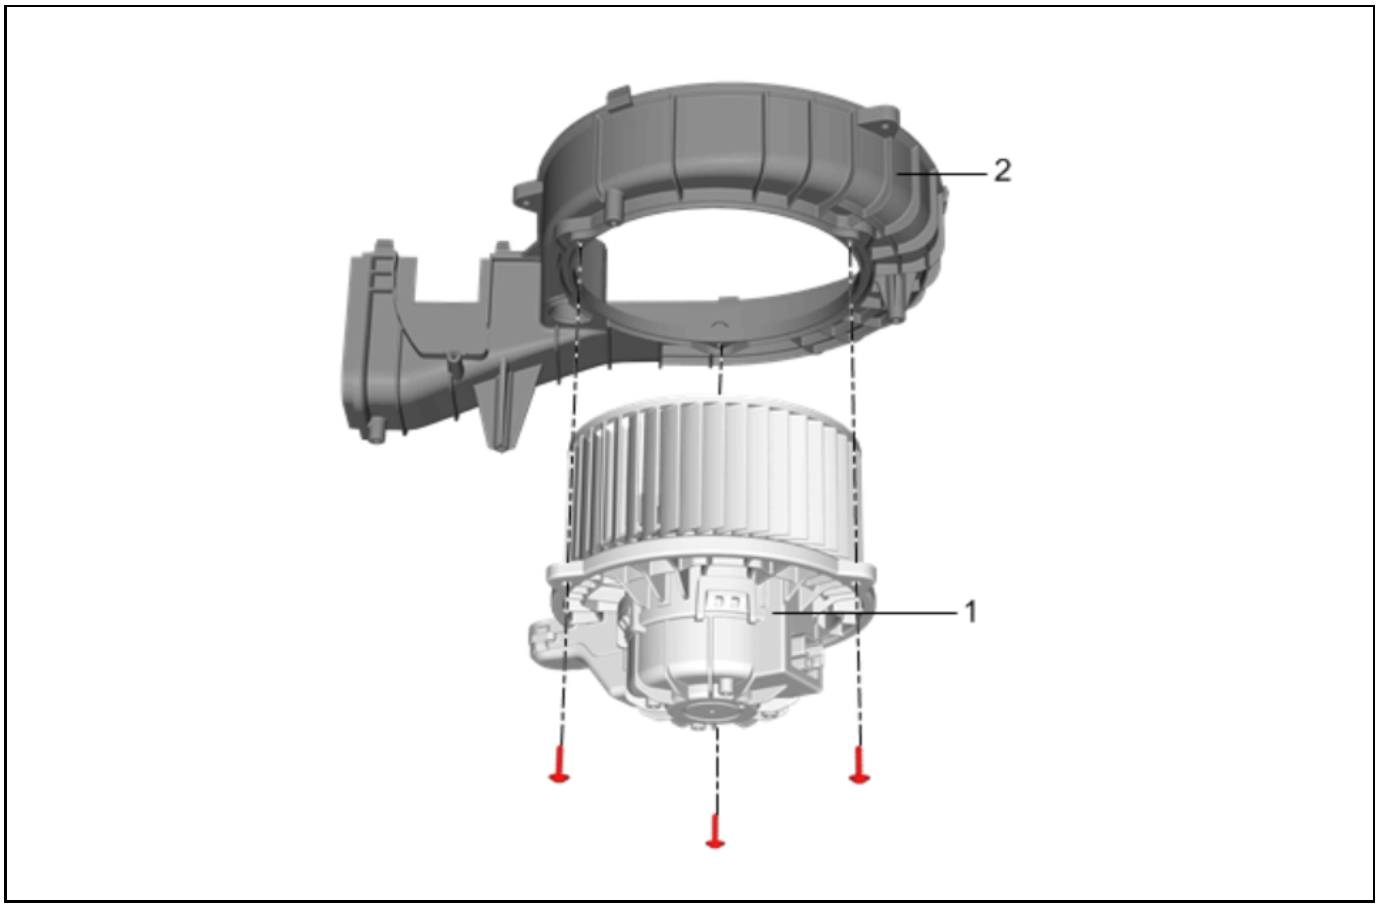
4545689

5. Blower Upper Case (2) » Remove — *Blower Upper Case Replacement on page 5-72*



4545690

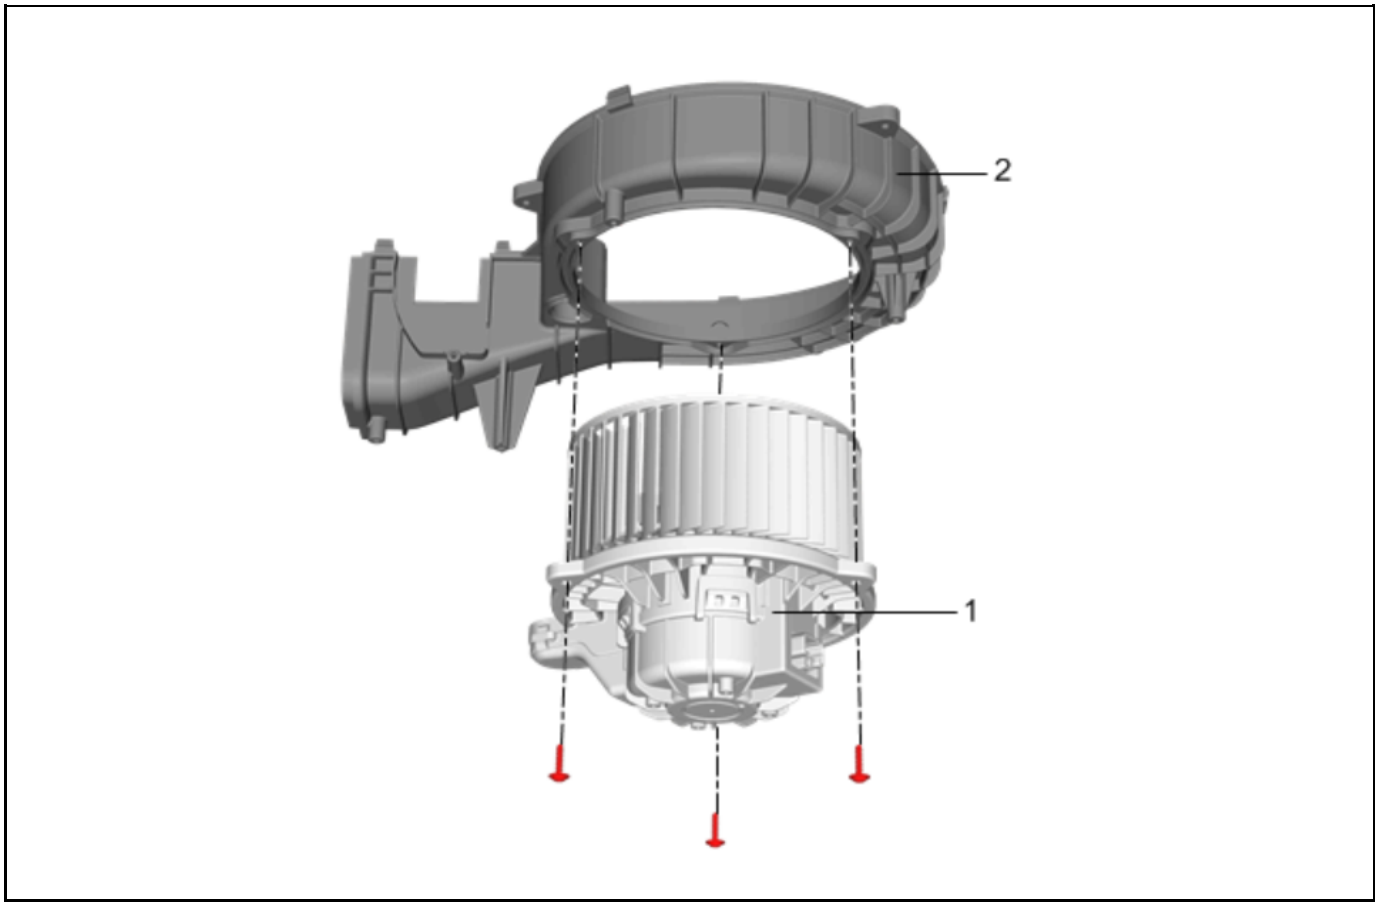
6. Screw (1) » Remove
7. Remove the electrical wiring harness (2)



4545691

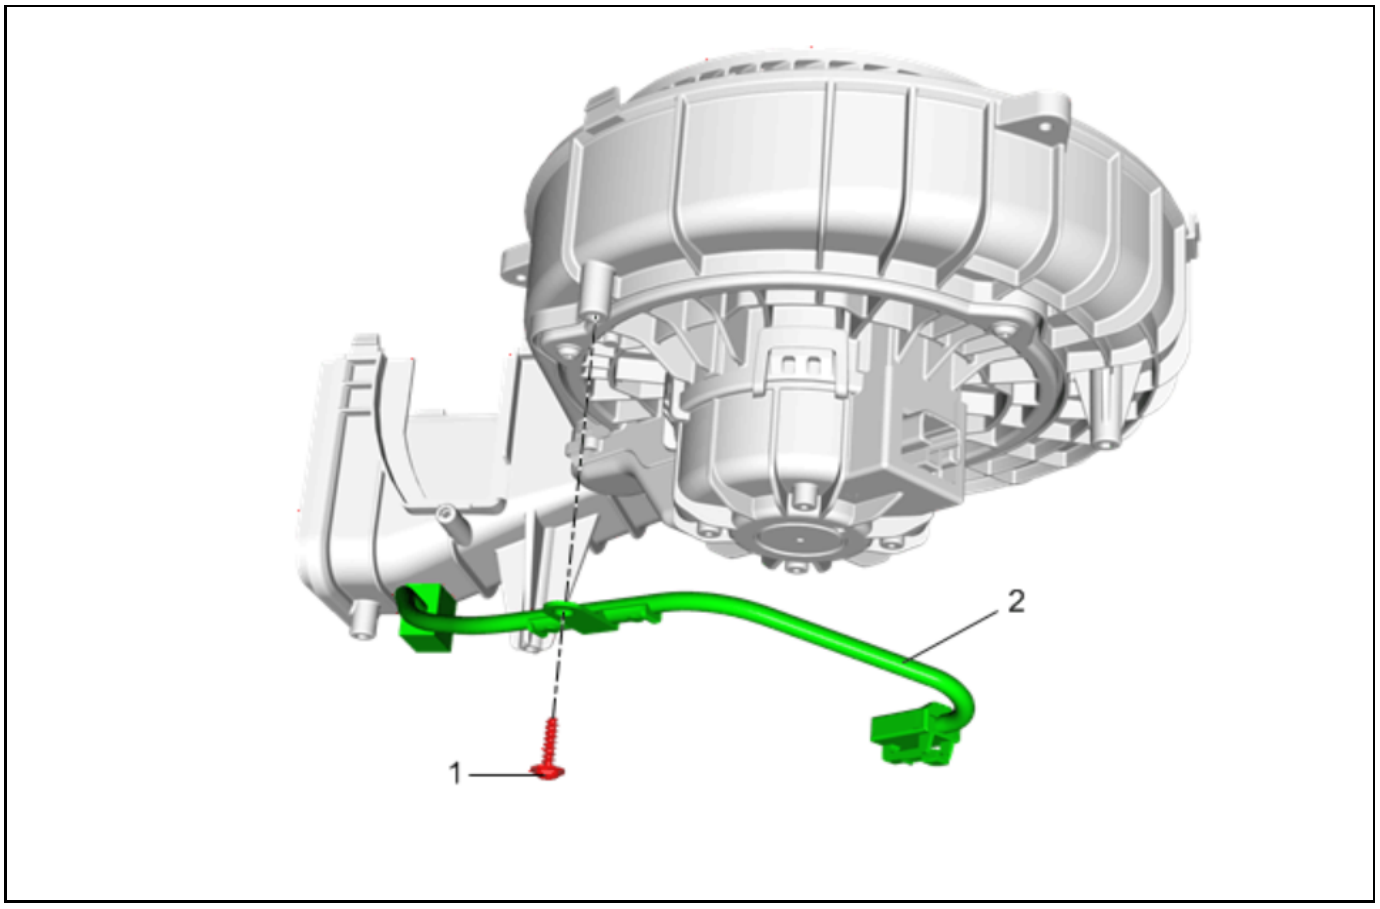
8. Blower Motor (1) » Remove — *Blower Motor Replacement on page 5-103*
9. Blower Lower Case (2) » Remove

Installation Procedure



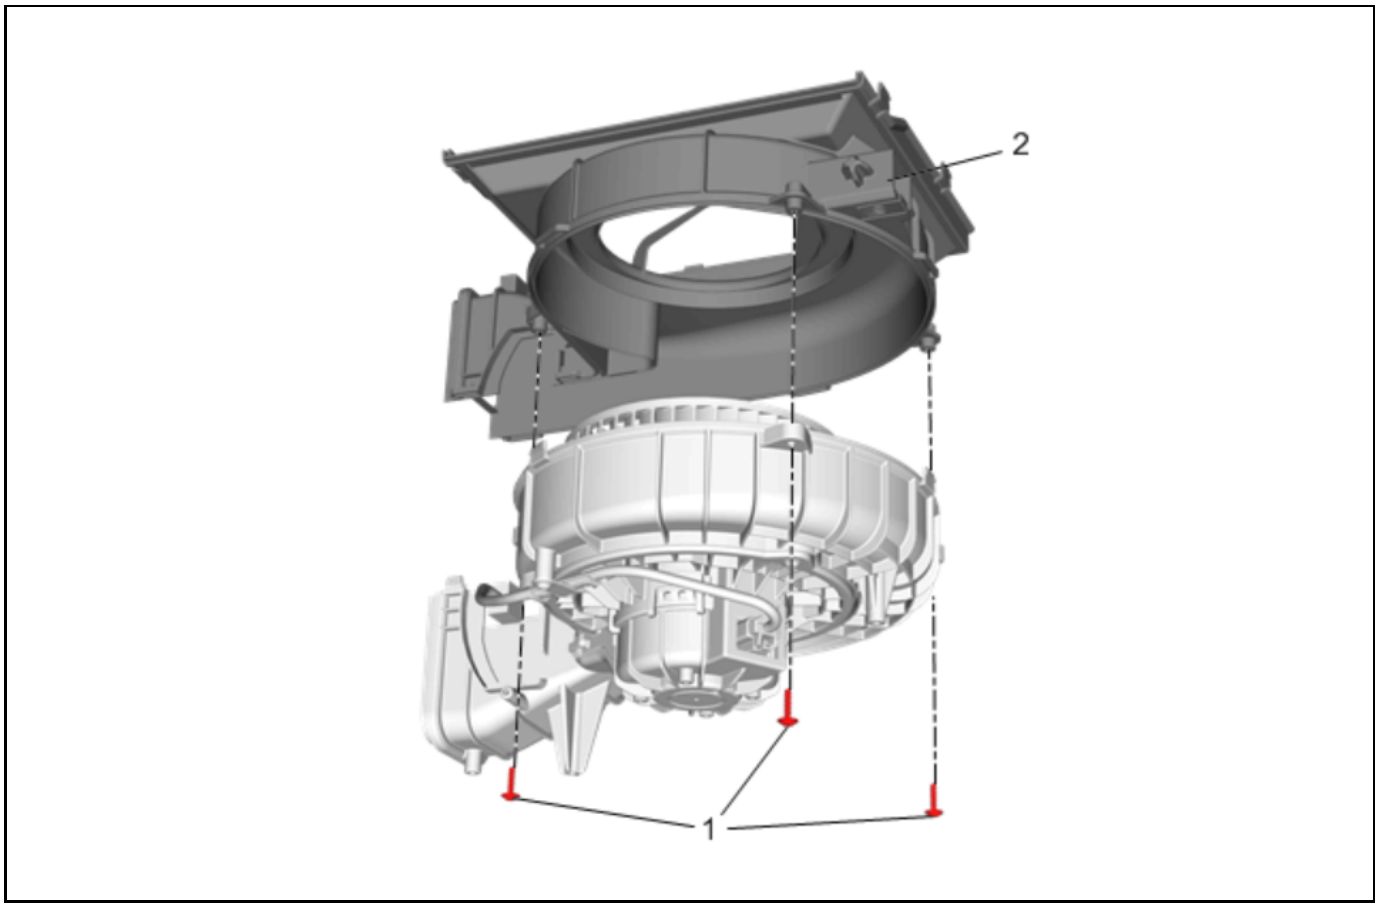
4545691

1. Blower Lower Case (2) » Install
2. Blower Motor (1) » Install — *Blower Motor Replacement on page 5-103*



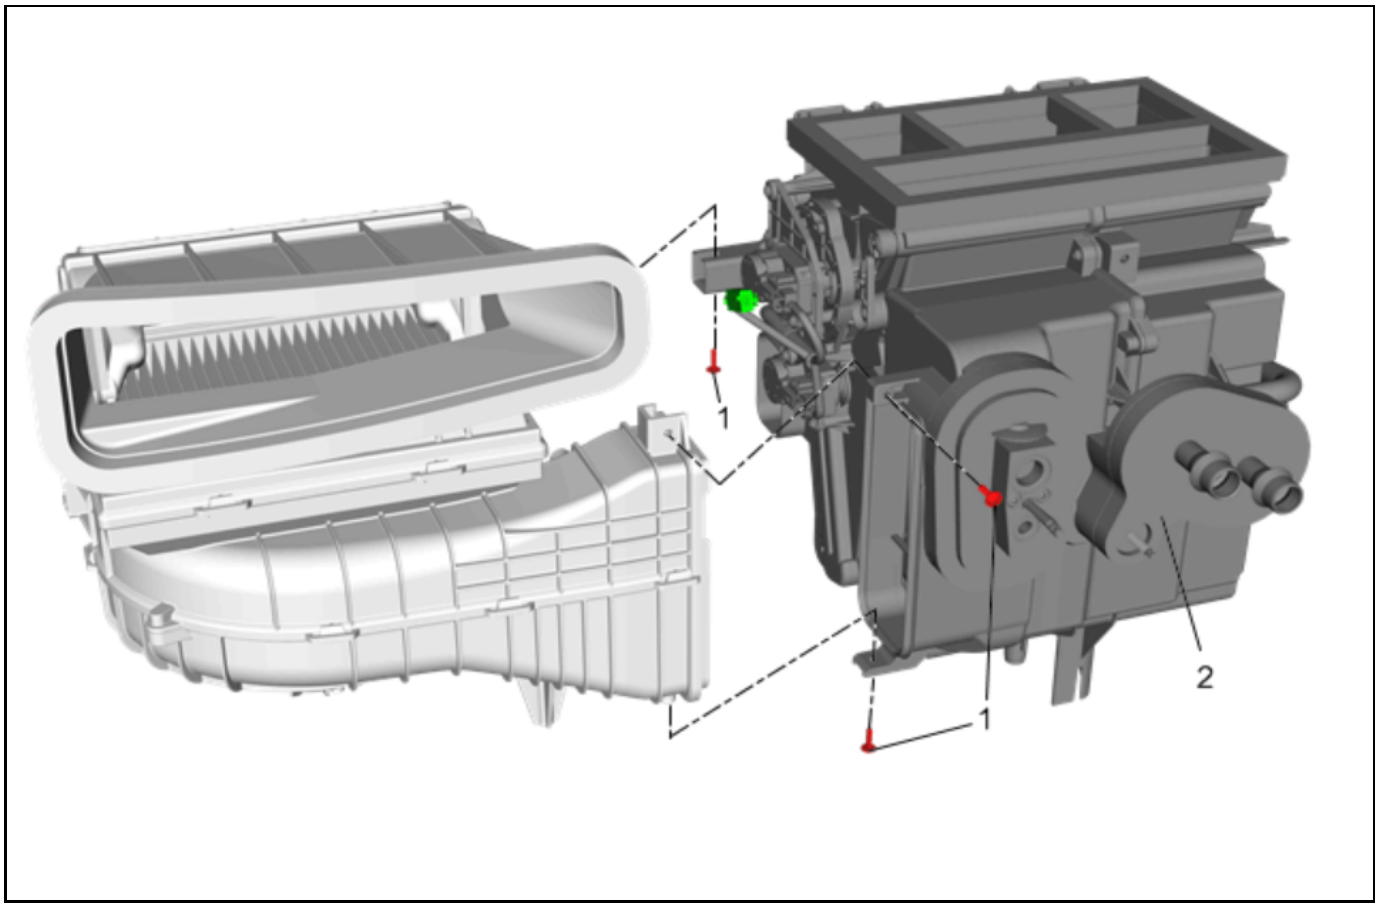
4545690

3. Install the electrical wiring harness (2).
4. Screw (1)» Install and tighten



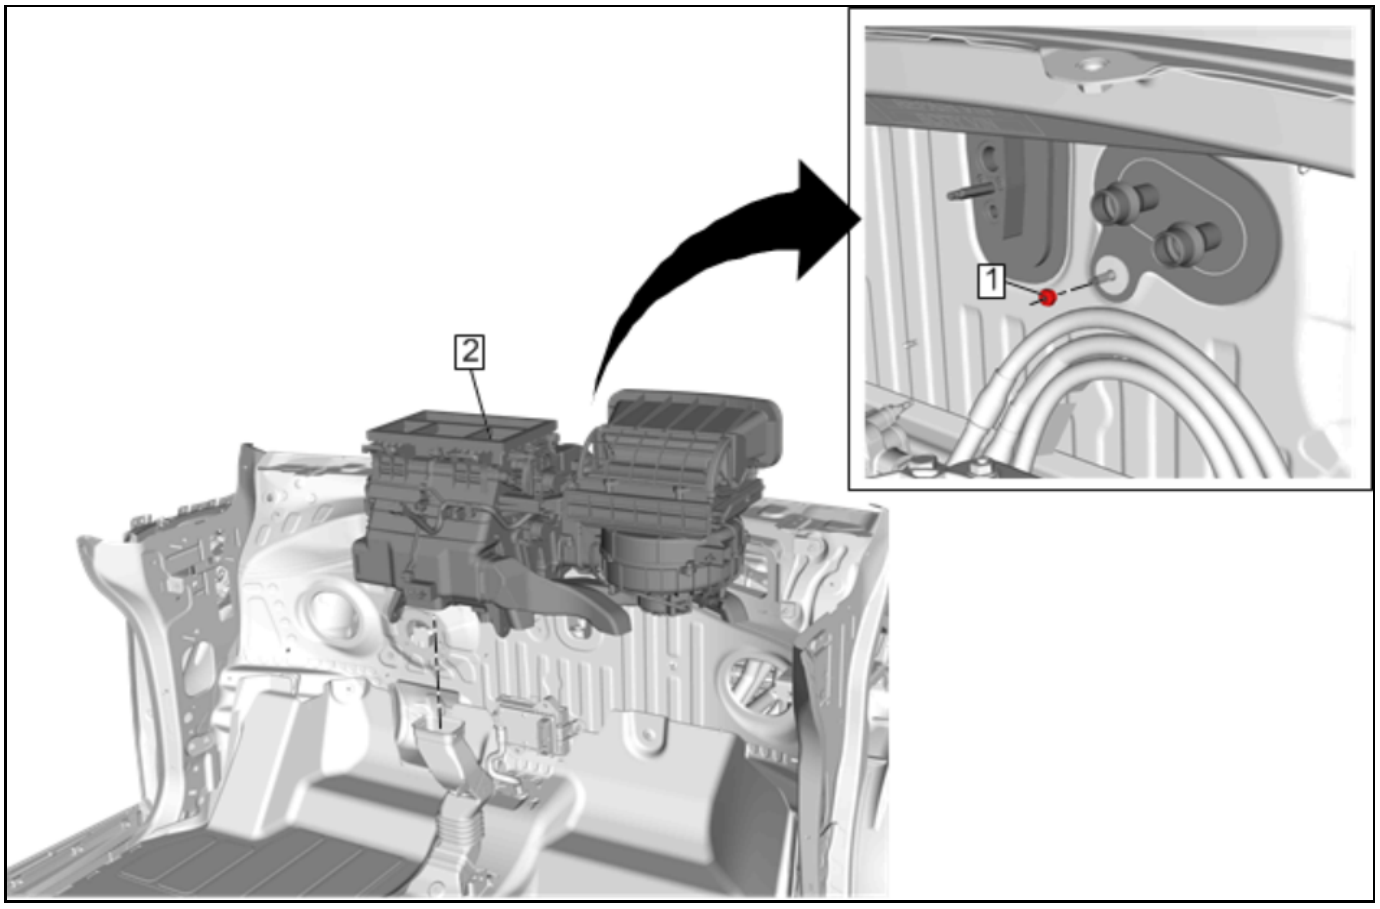
4545689

5. Blower Upper Case (2) » Install *Blower Upper Case Replacement on page 5-72*



4544257

6. Heater and Air Conditioning Evaporator Case (2)
   » Install *Heater and Air Conditioning Evaporator Case Replacement on page 5-62*



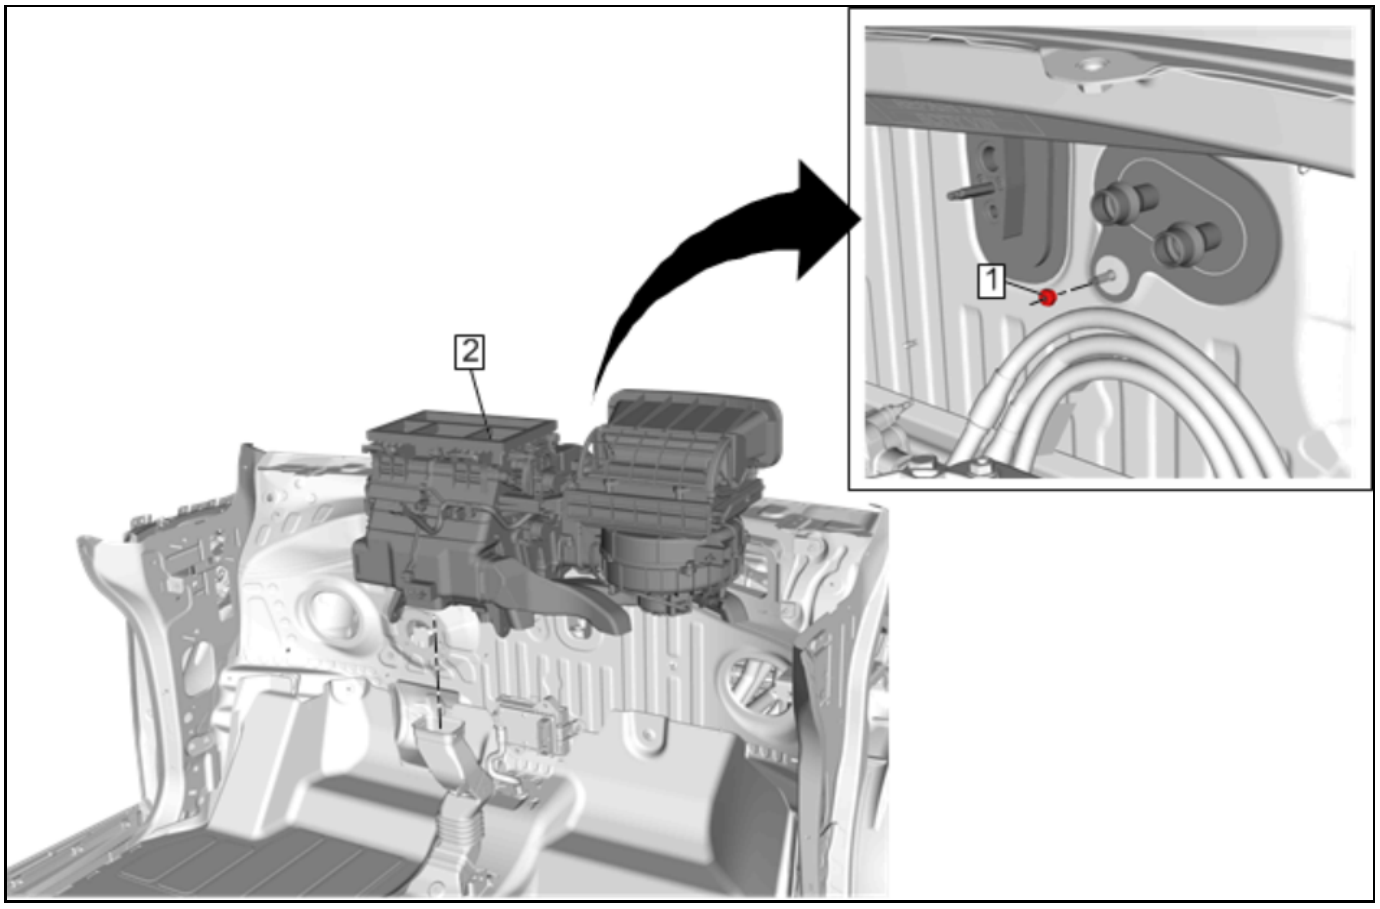
4544229

7. Heater and Air Conditioning Evaporator and Blower Module (2) » Install — *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57*
8. Evacuate and charge the refrigerant system. *Refrigerant Recovery and Recharging on page 5-18*
9. Connect the battery negative cable.

Blower Upper Case Replacement

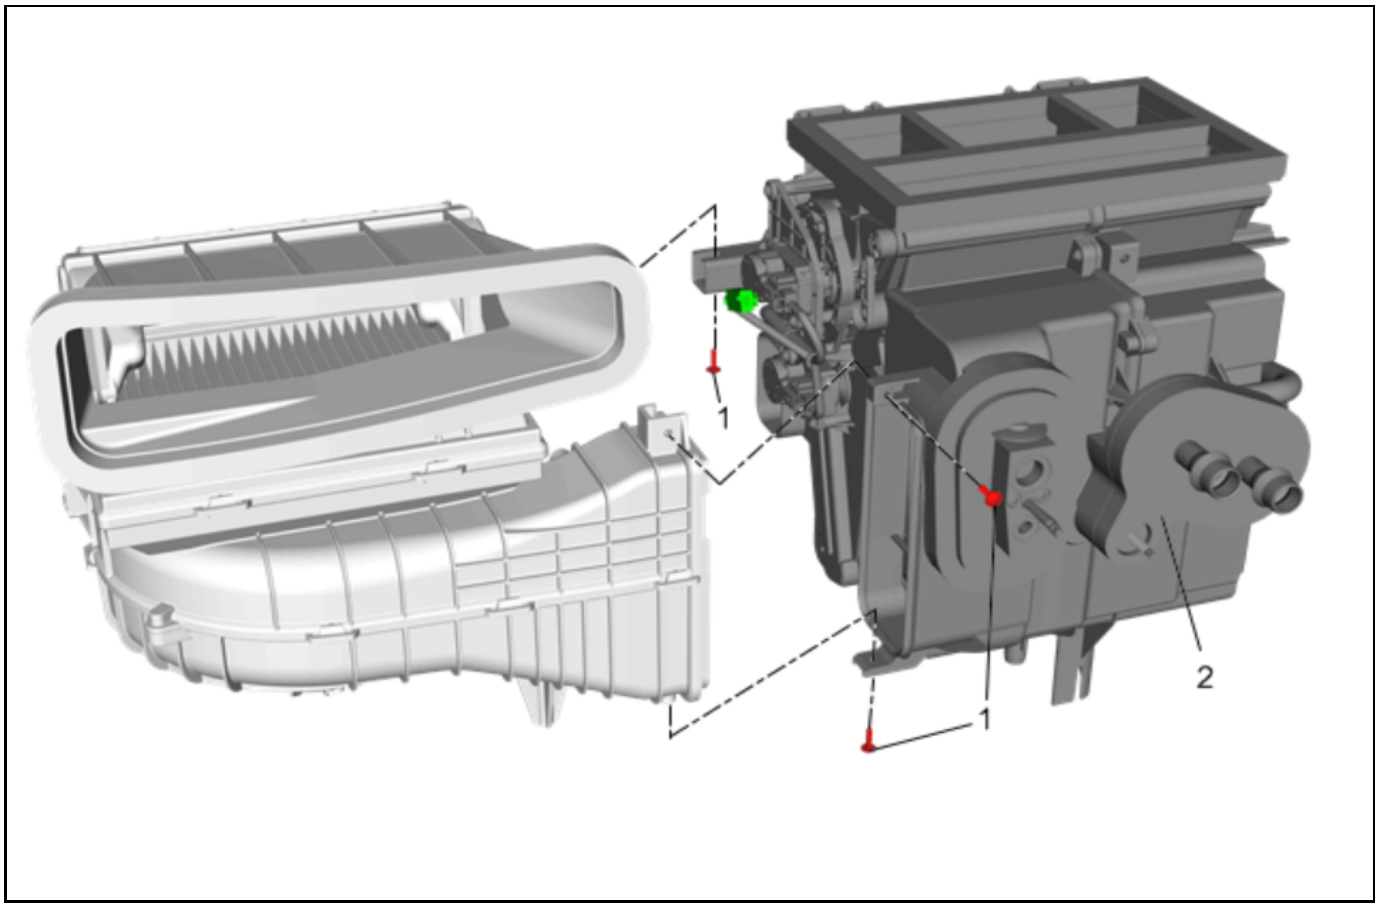
Removal Procedure

1. Disconnect the battery negative cable.
2. Recover the refrigerant. *Refrigerant Recovery and Recharging on page 5-18*



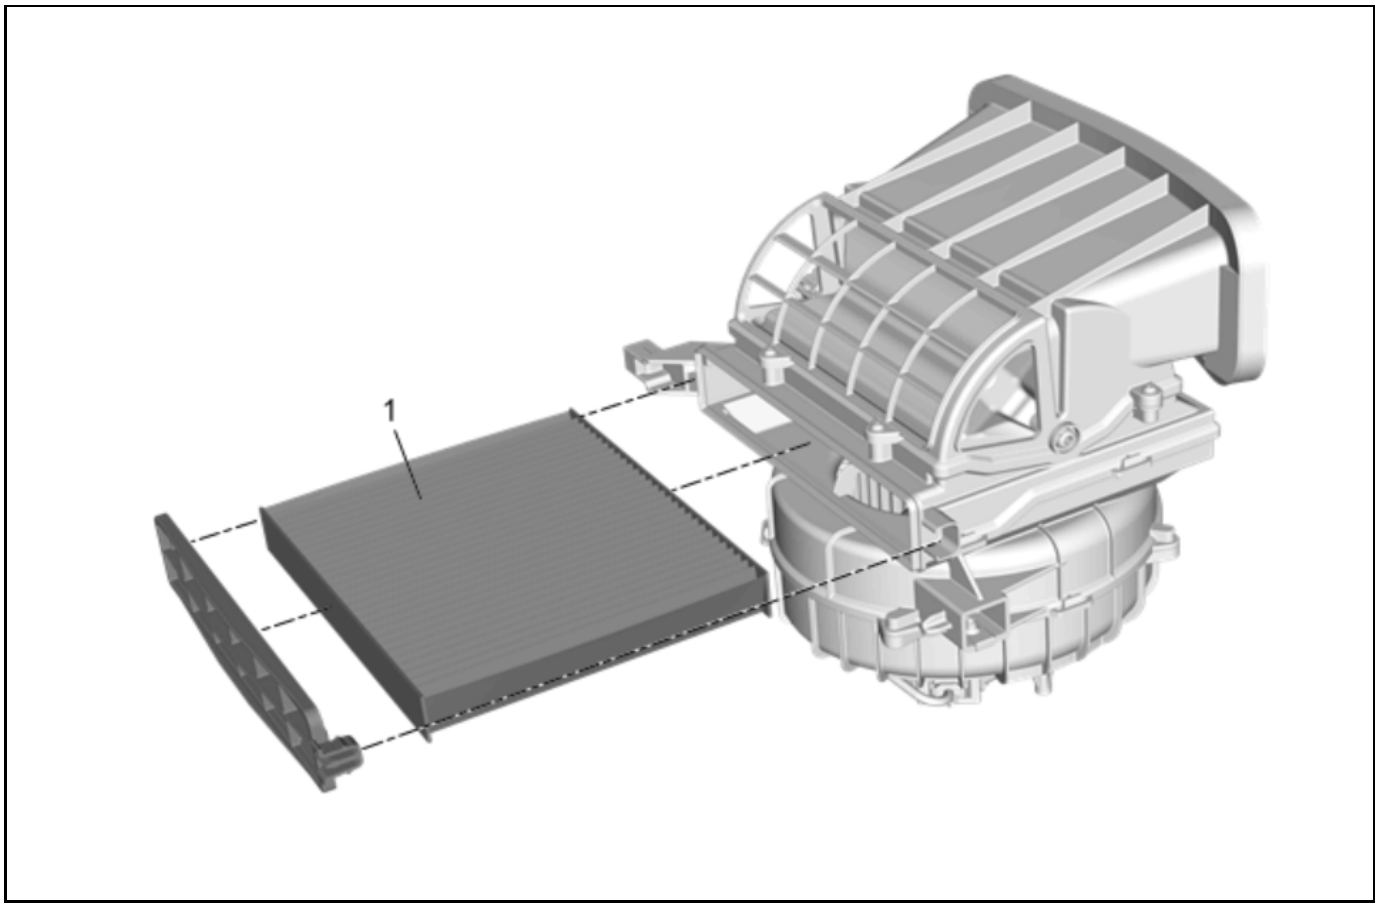
4544229

3. Heater and Air Conditioning Evaporator and Blower Module (2) » Remove — *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57*



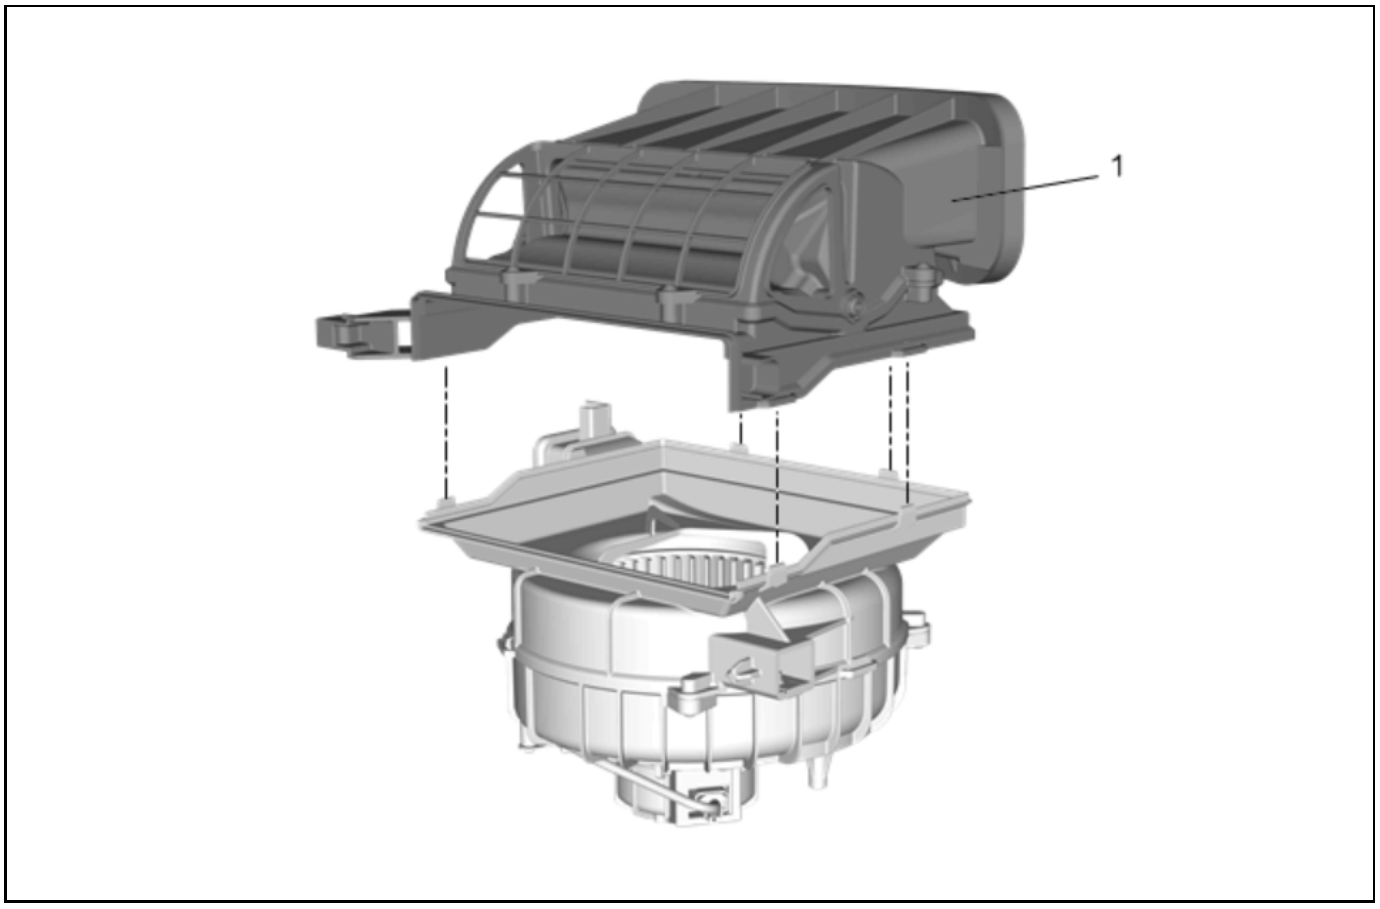
4544257

4. Heater and Air Conditioning Evaporator Case (2)
   » Remove — *Heater and Air Conditioning Evaporator Case Replacement on page 5-62*



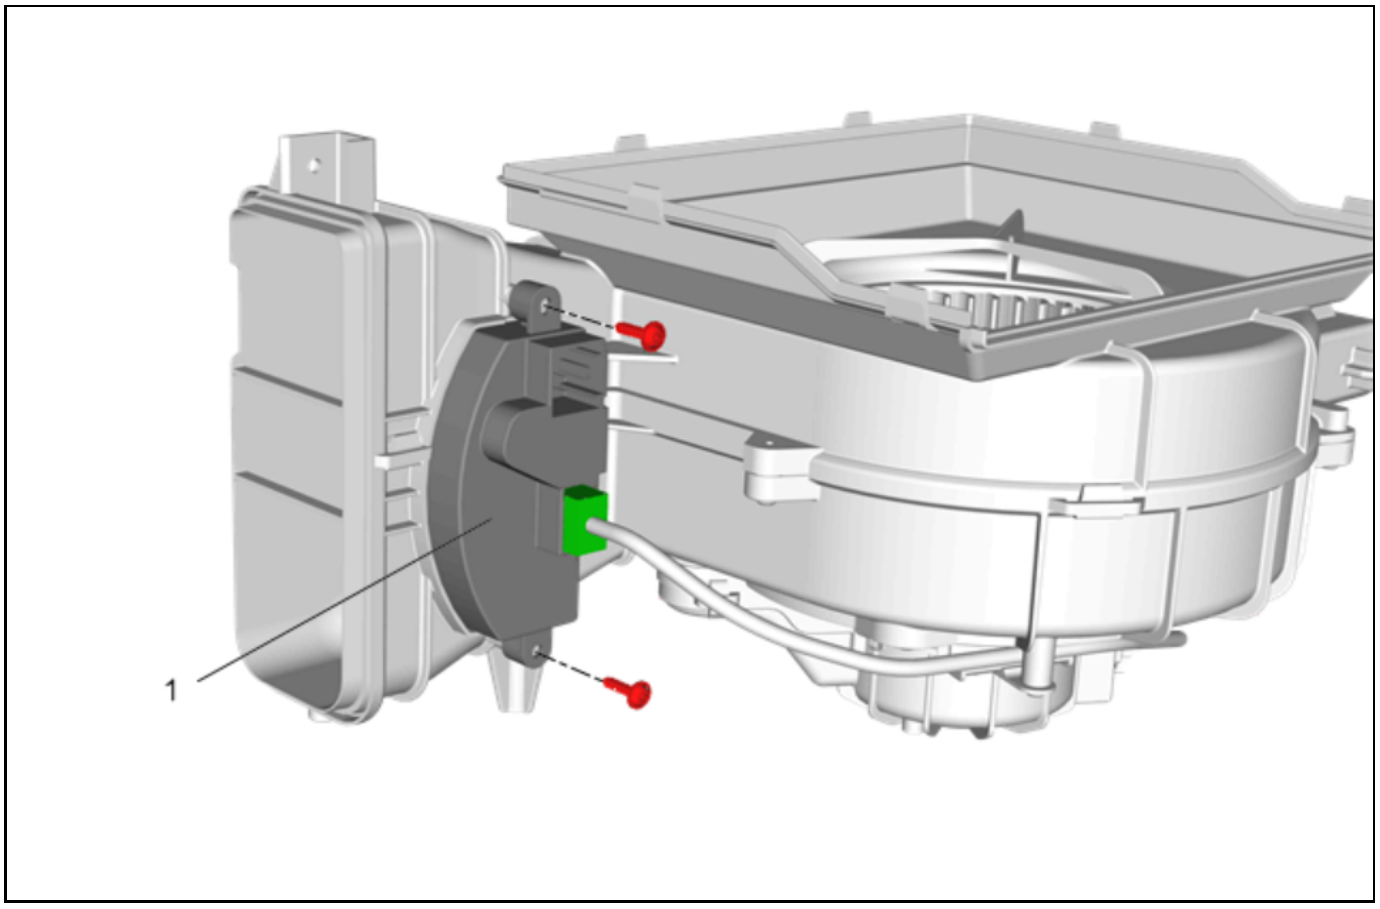
4545686

5. Passenger Compartment Air Filter (1) » Remove
— *Passenger Compartment Air Filter Replacement on page 5-98*



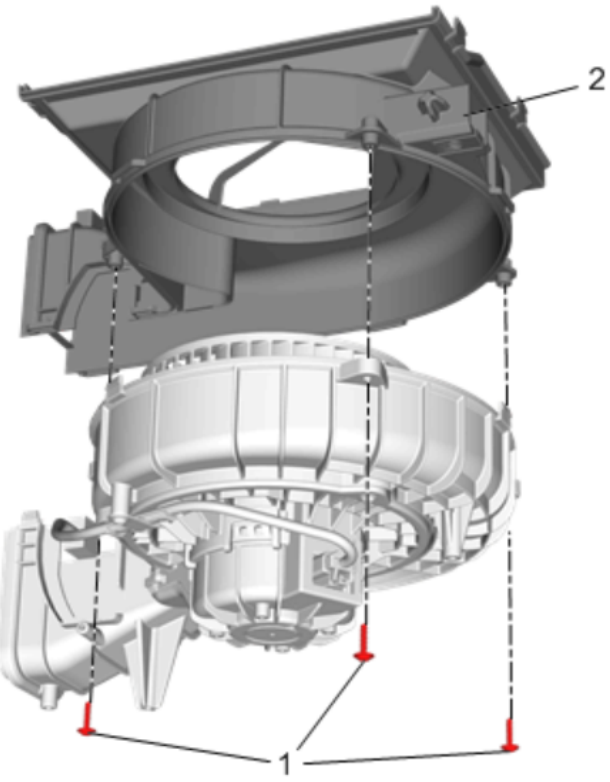
4545687

6. Air Inlet Housing (1) » Remove — *Air Inlet Housing Replacement on page 5-101*



4545688

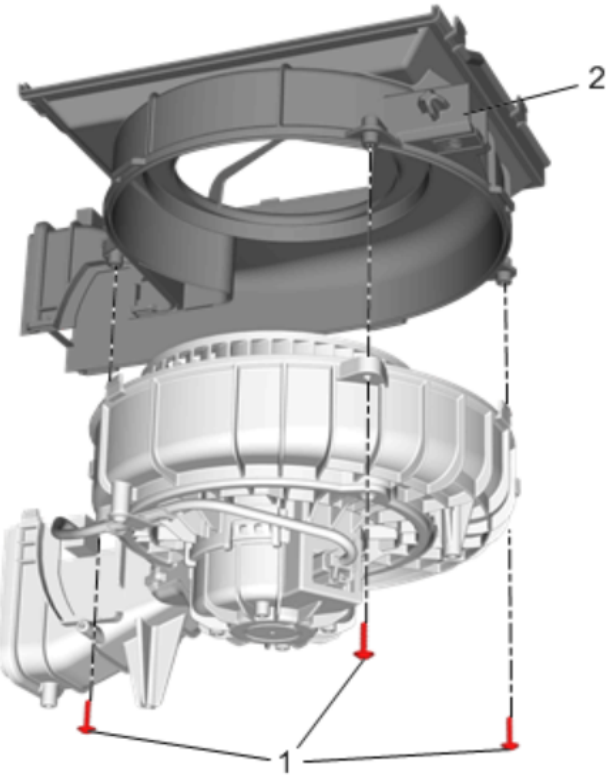
7. Blower Motor Control Module (1) » Remove — *Blower Motor Control Replacement (Module Mounted) on page 5-102*



4545689

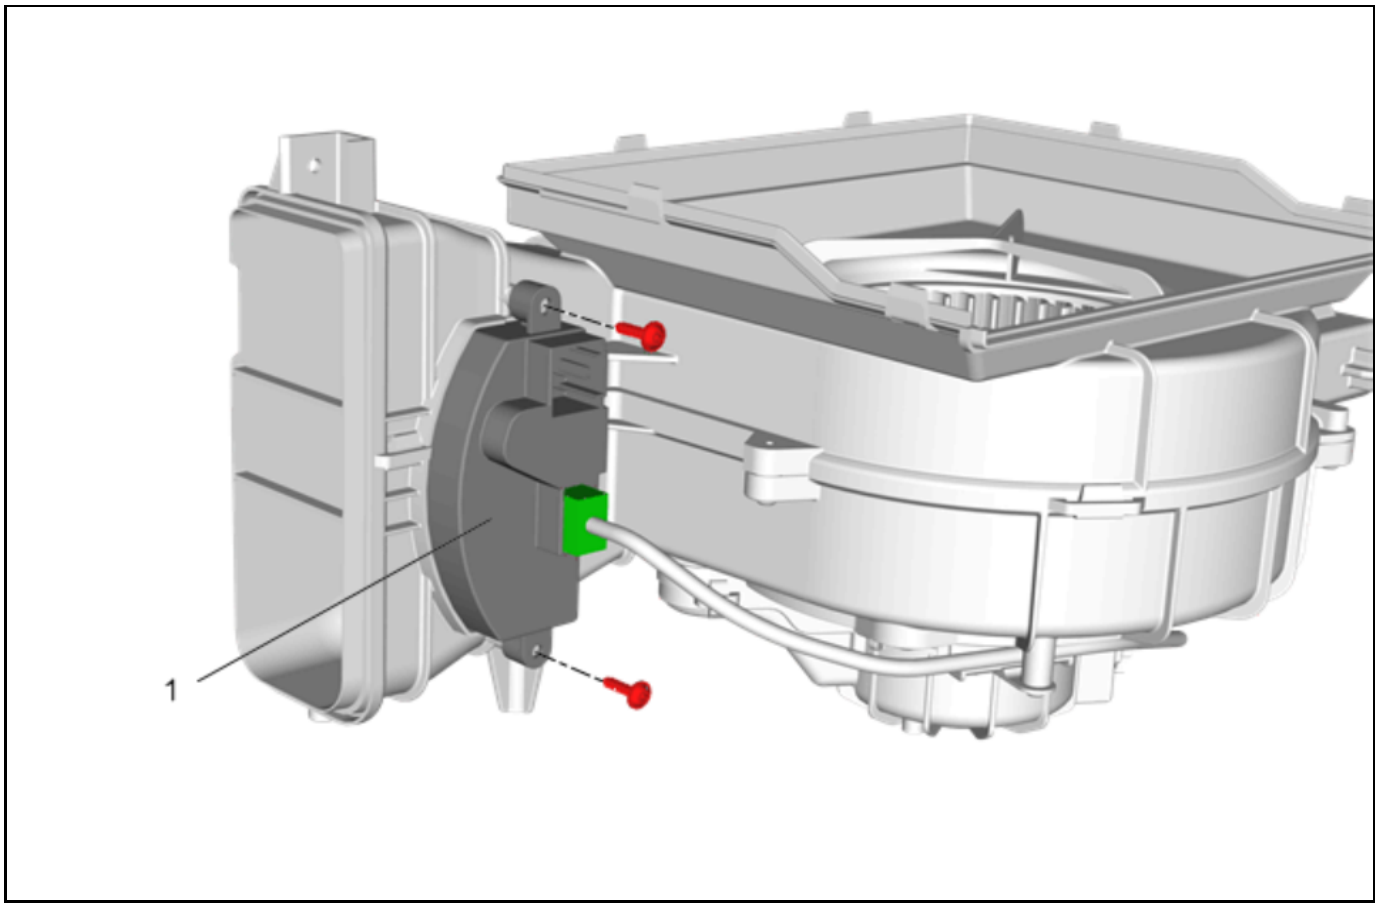
8. Blower Upper Case Screw (1) » Remove [3x]
9. Blower Upper Case (2) » Remove
10. Using the appropriate tools, release the integral retaining features.

Installation Procedure



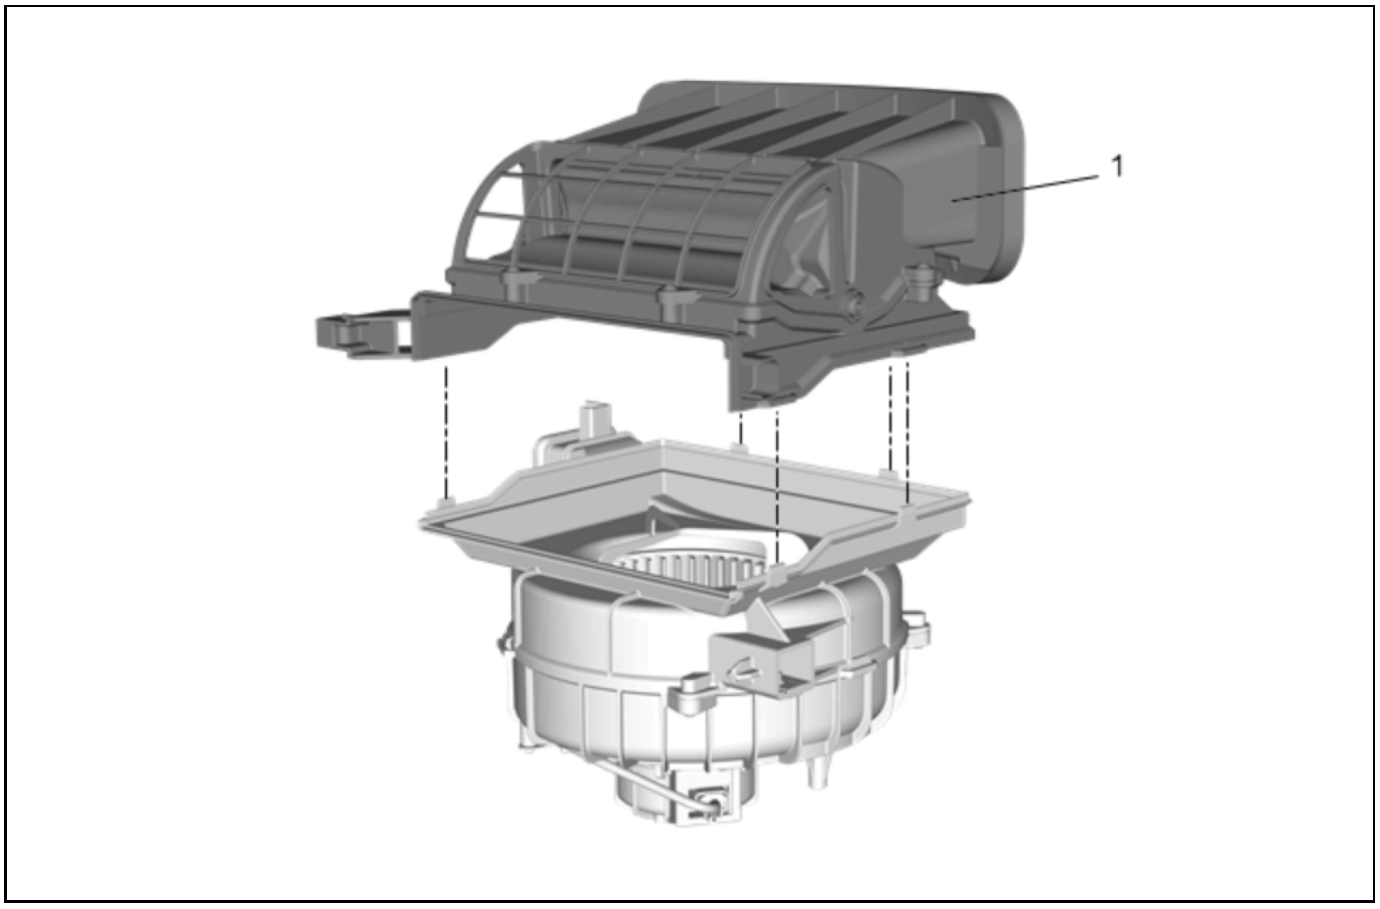
4545689

1. Blower Upper Case (2) » Install
2. Blower Upper Case Screw (1)» Install and tighten [3x] **2.5 N•m(22 lb in)**



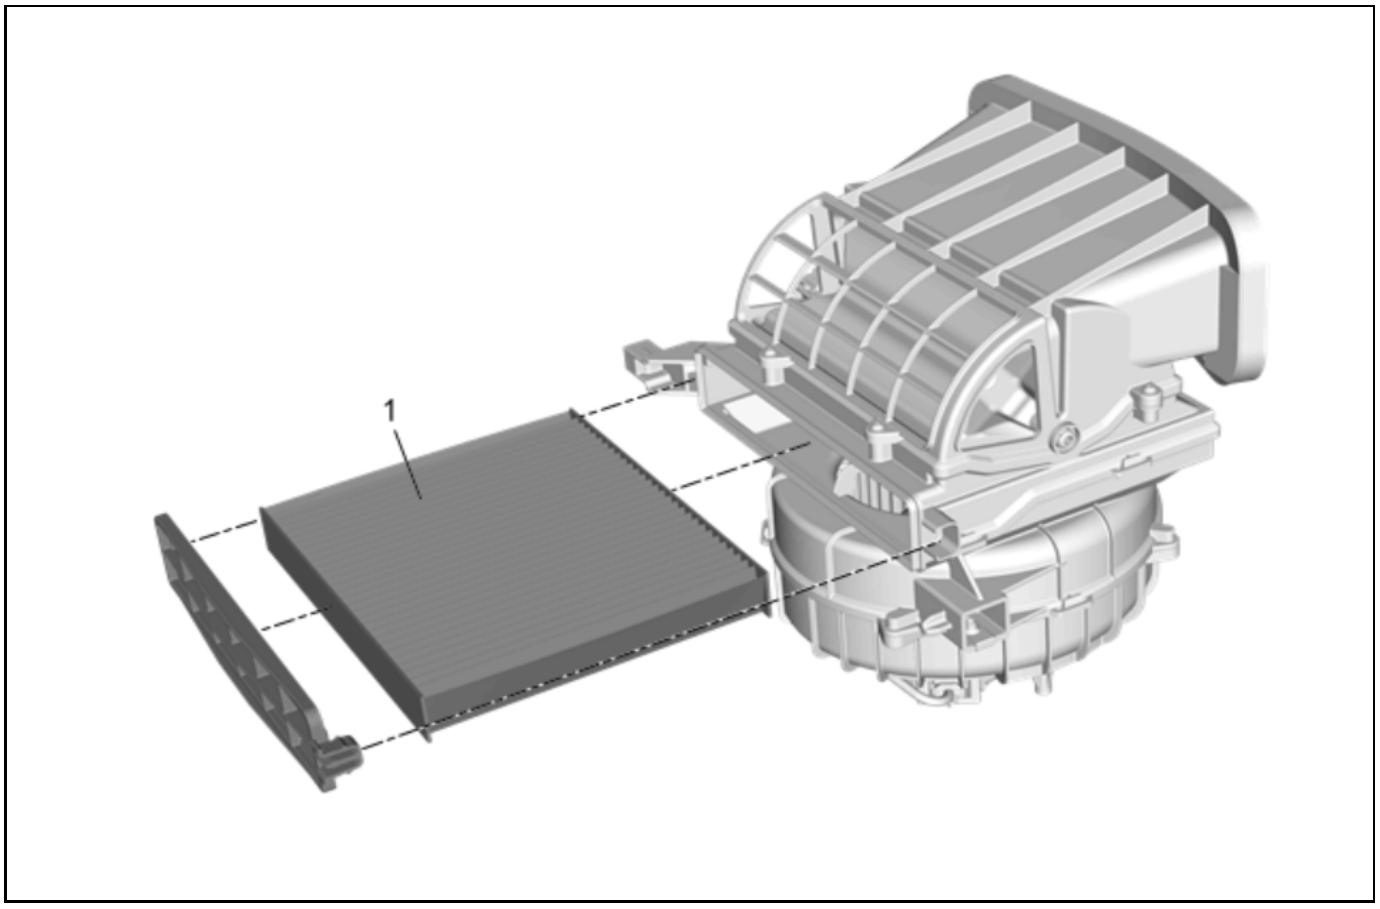
4545688

3. Blower Motor Control Module (1) » Install — *Blower Motor Control Replacement (Module Mounted) on page 5-102*



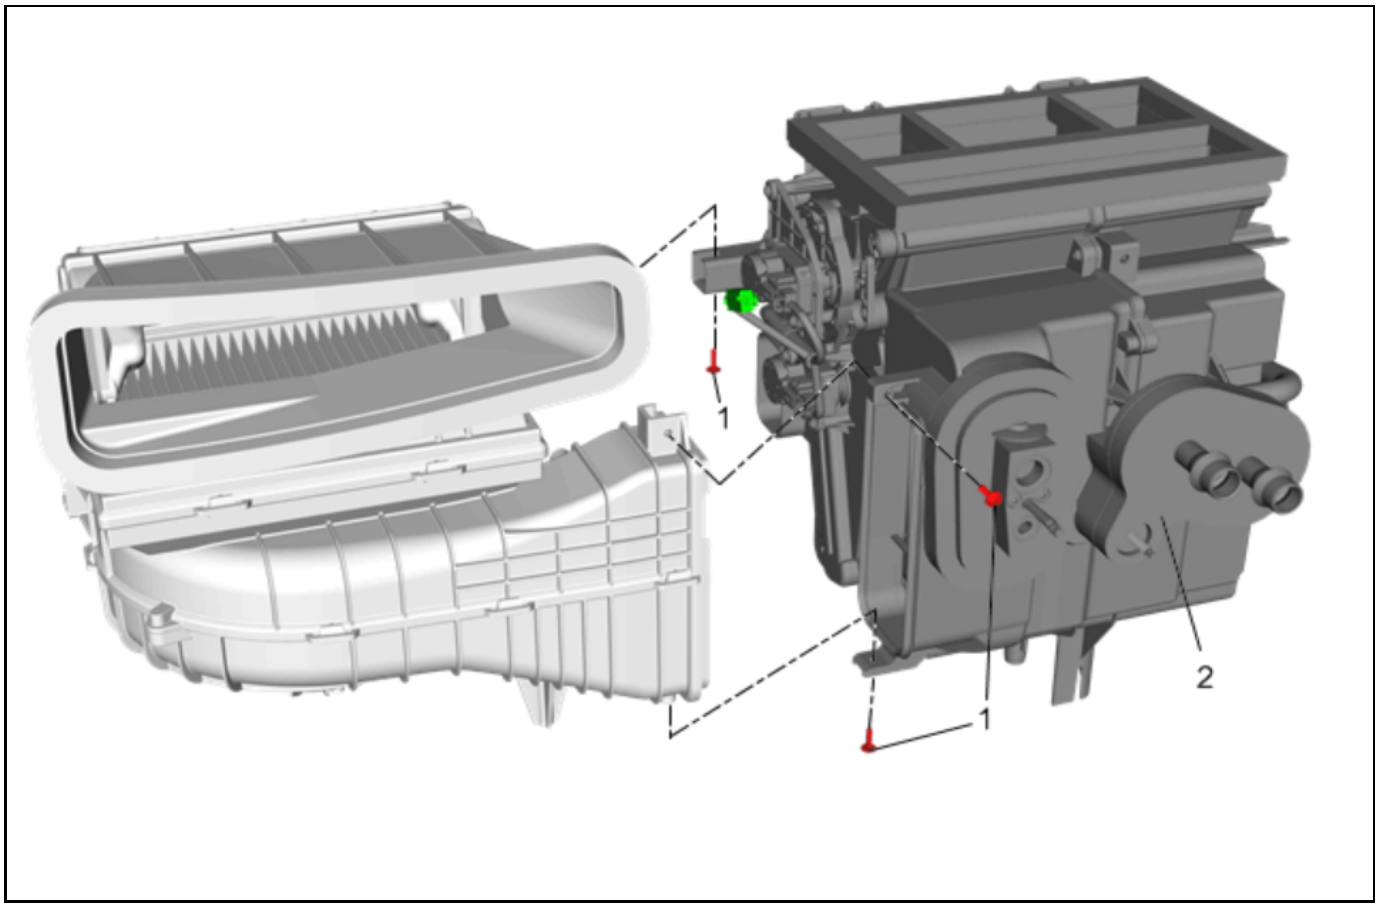
4545687

4. Air Inlet Housing (1) » Install — *Air Inlet Housing Replacement on page 5-101*



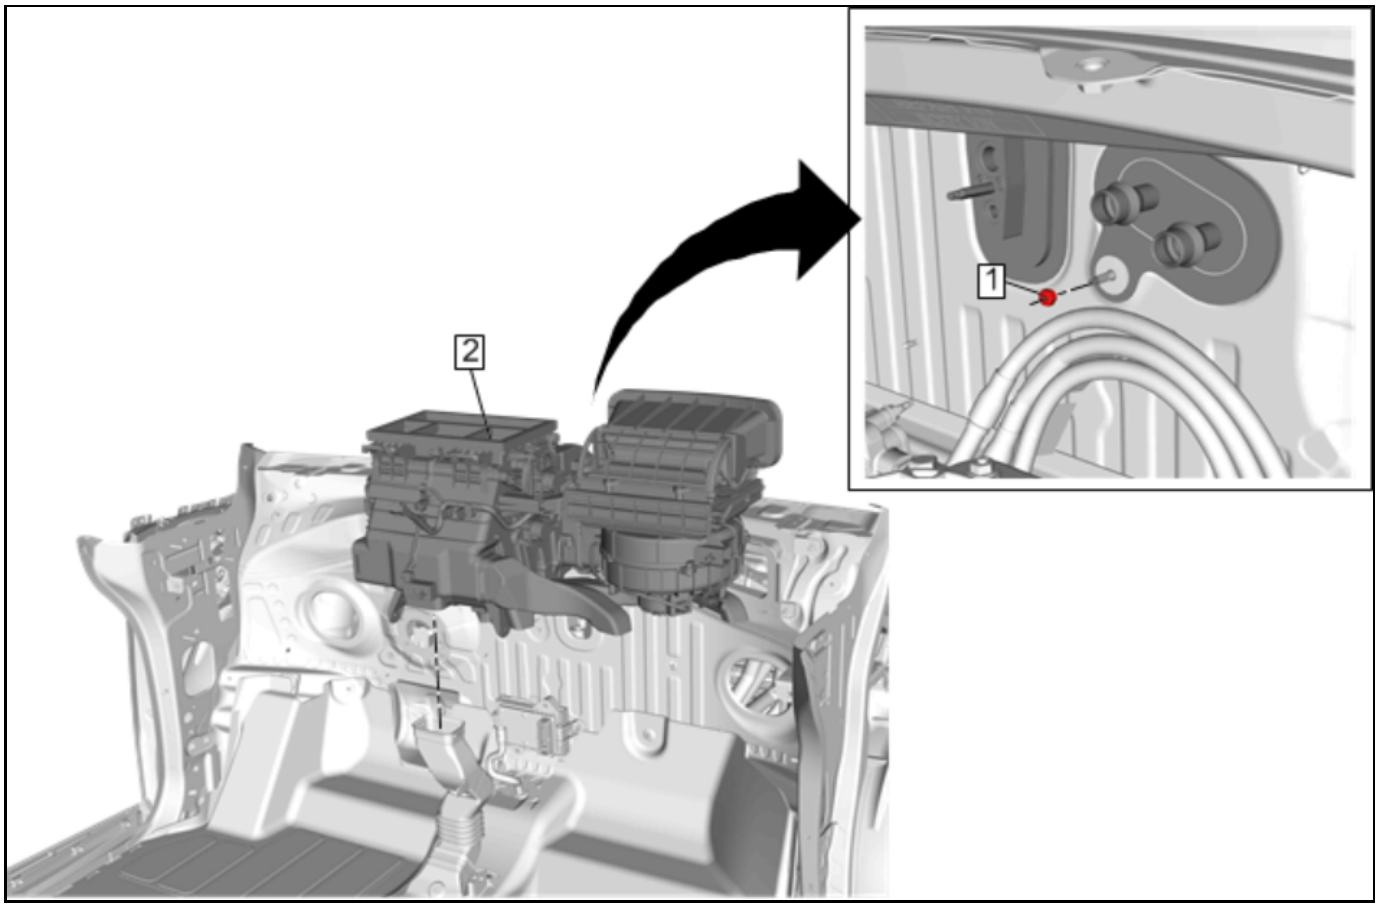
4545686

5. Passenger Compartment Air Filter (1) » Install — *Passenger Compartment Air Filter Replacement on page 5-98*



4544257

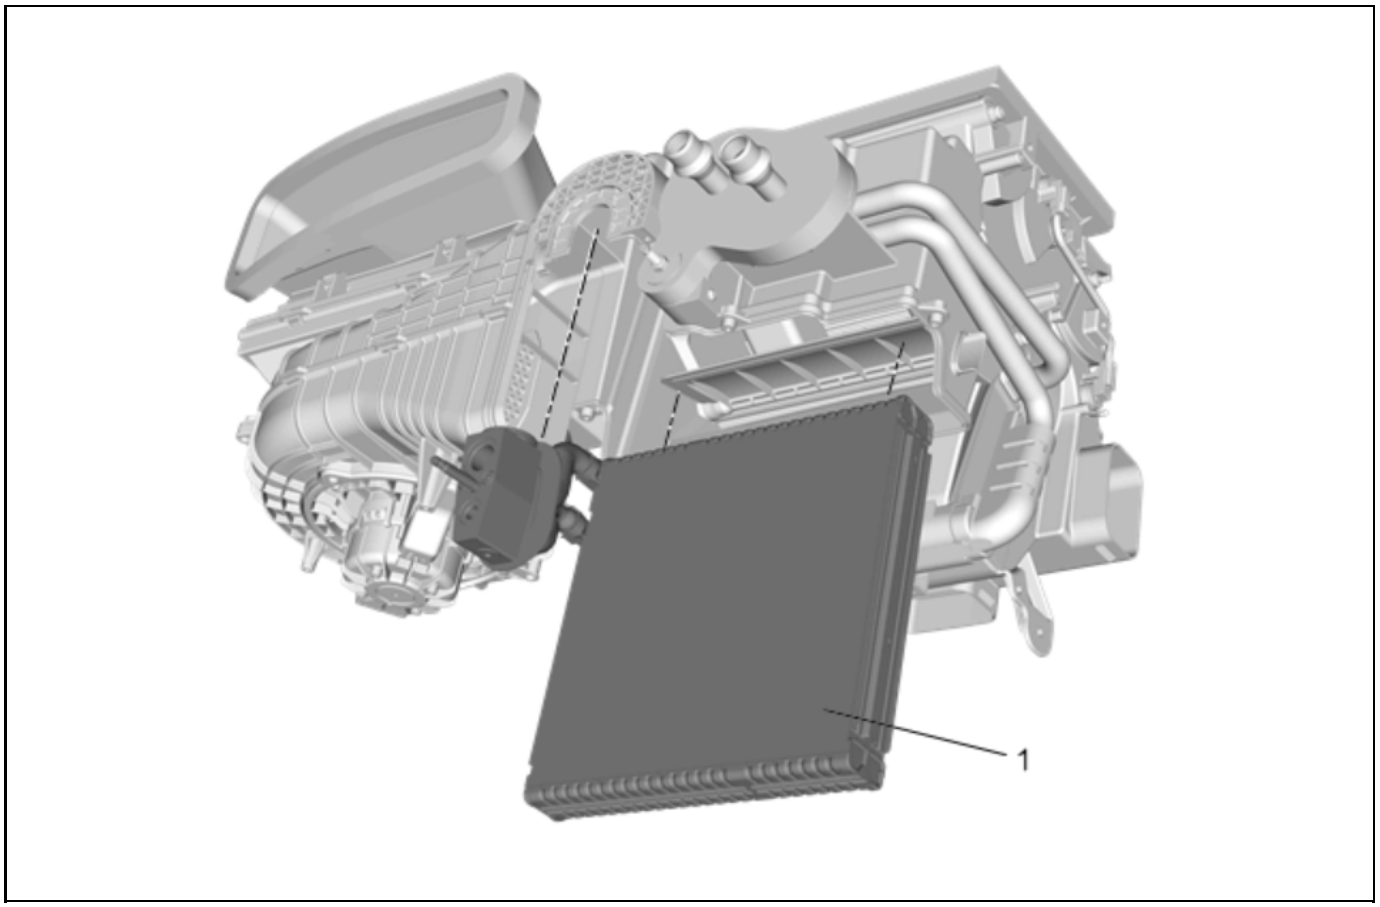
6. Heater and Air Conditioning Evaporator Case (2)
   » Install — *Heater and Air Conditioning Evaporator Case Replacement on page 5-62*



4544229

7. Heater and Air Conditioning Evaporator and Blower Module (2) » Install — *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57*
8. Evacuate and charge the refrigerant system. *Refrigerant Recovery and Recharging on page 5-18*
9. Connect the battery negative cable.

Air Conditioning Evaporator Replacement

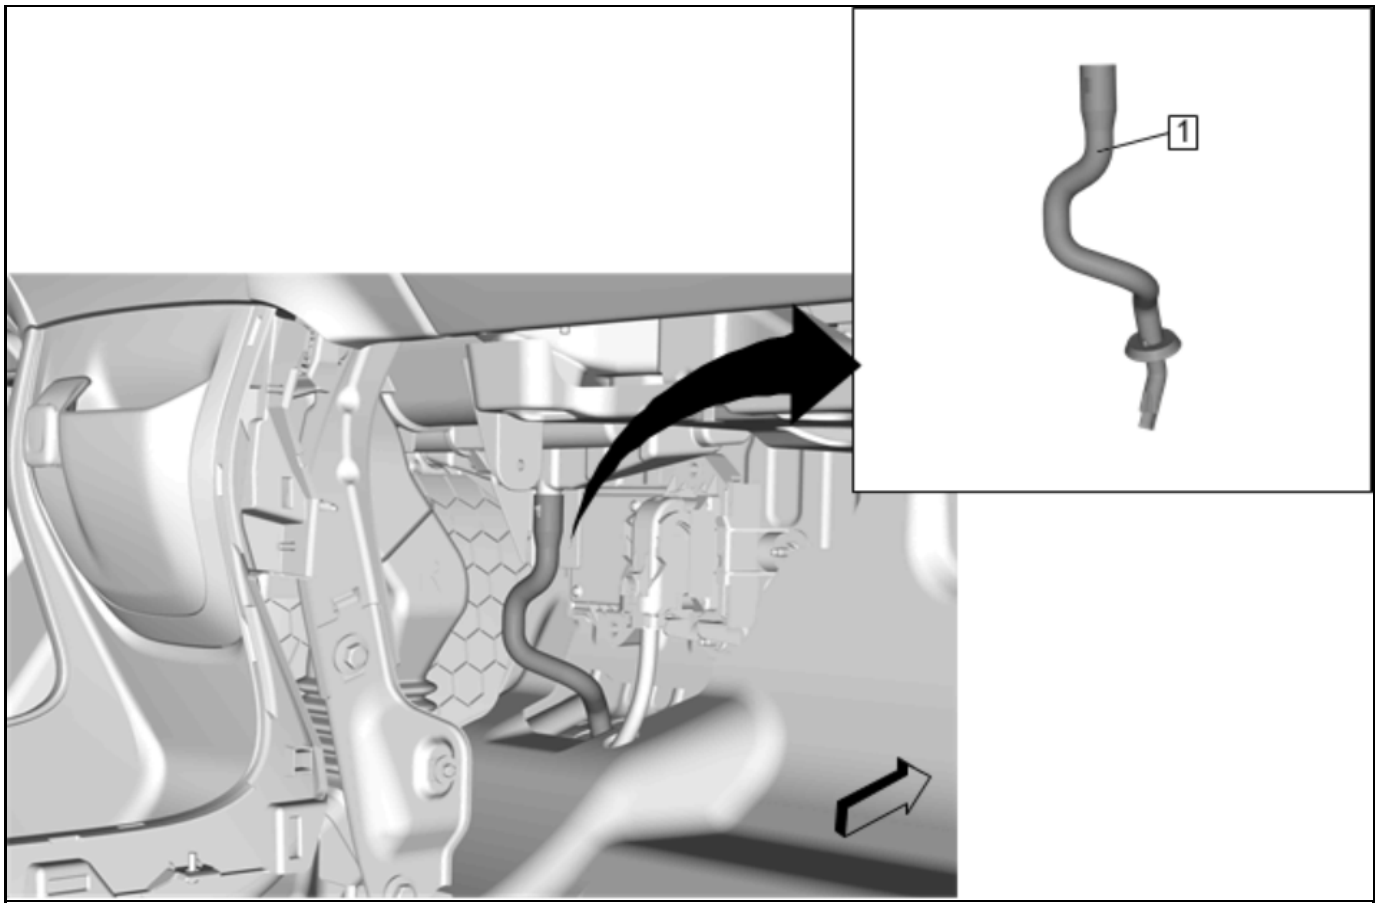


4544254

Air Conditioning Evaporator Replacement

Callout	Component Name
Preliminary Procedures 1. Disconnect the battery negative cable. 2. Remove the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57* 3. *Heater Case Replacement on page 5-137*	
1	Air Conditioning Evaporator **Procedure** 1. Transfer components as necessary. 2. Install the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57* 3. Connect the battery negative cable.

Air Conditioning Evaporator and Blower Module Drain Hose Replacement



4533263

Air Conditioning Evaporator and Blower Module Drain Hose Replacement

Callout	Component Name
Preliminary Procedure Front Floor Console Replacement	
1	Air Conditioning Evaporator and Blower Module Drain Hose **Procedure** Release and pull off the drain hose from the HVAC module assembly and unsnap the drain fitting grommet from the front floor panel.

Heater Inlet Hose Replacement

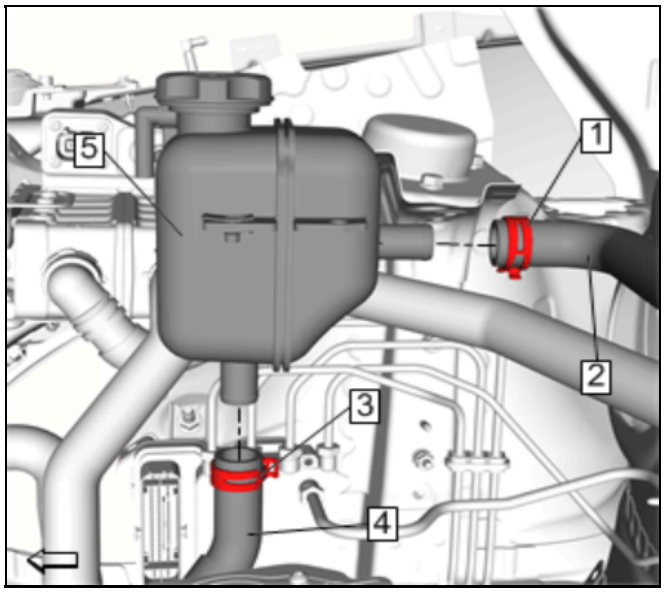
Special Tools

BO-38185 Hose Clamp Pliers

Equivalent regional tools: *Special Tools on page 5-138*

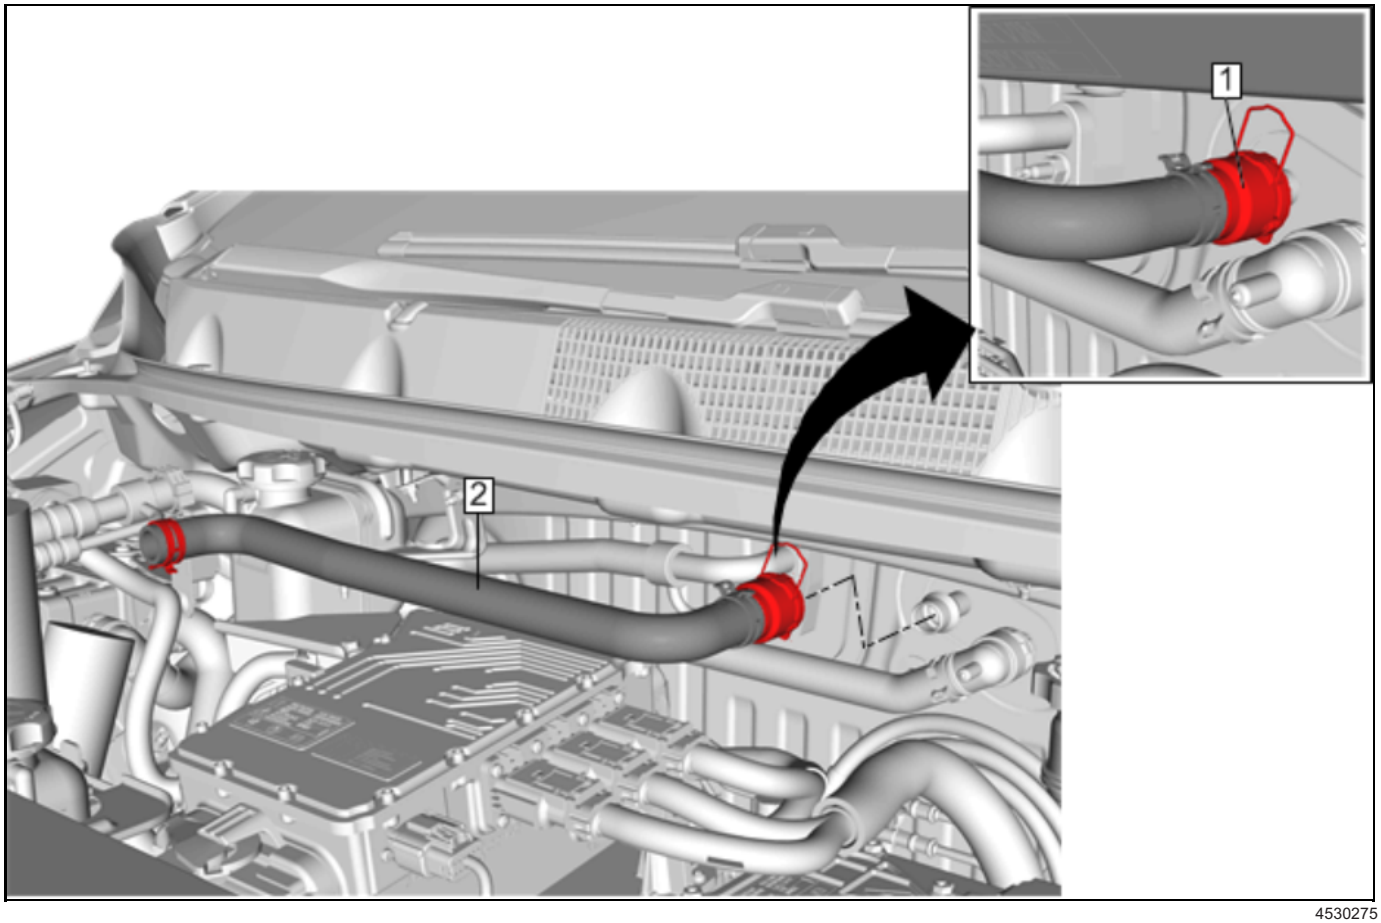
Removal Procedure

1. Drain the cooling system. *Heater Coolant Heater Draining and Filling on page 5-22*



4500157

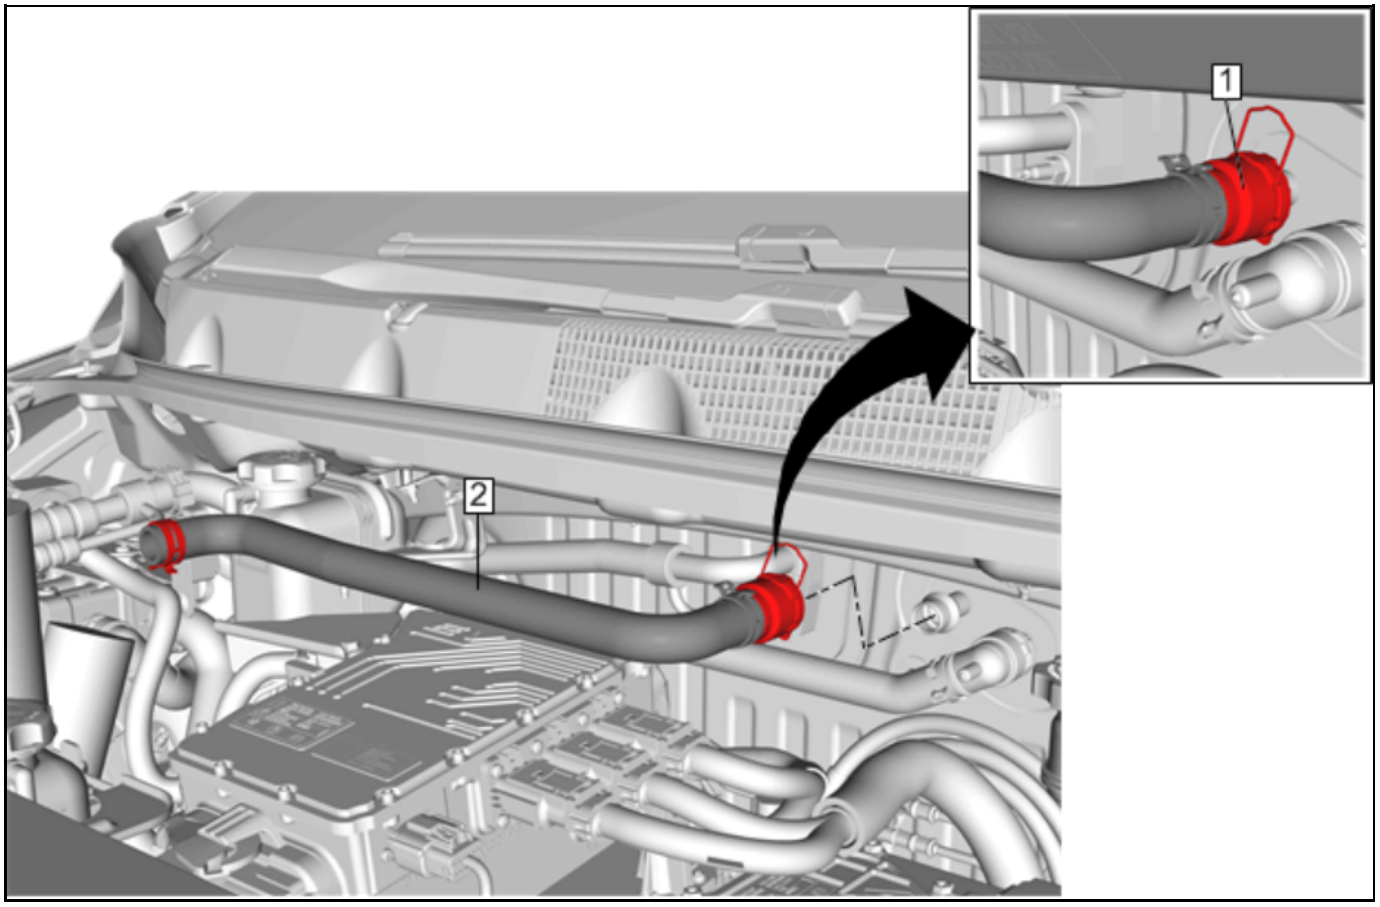
2. Disengage the clamp (1) and remove the heater inlet hose (2) from the heater coolant surge tank.



4530275

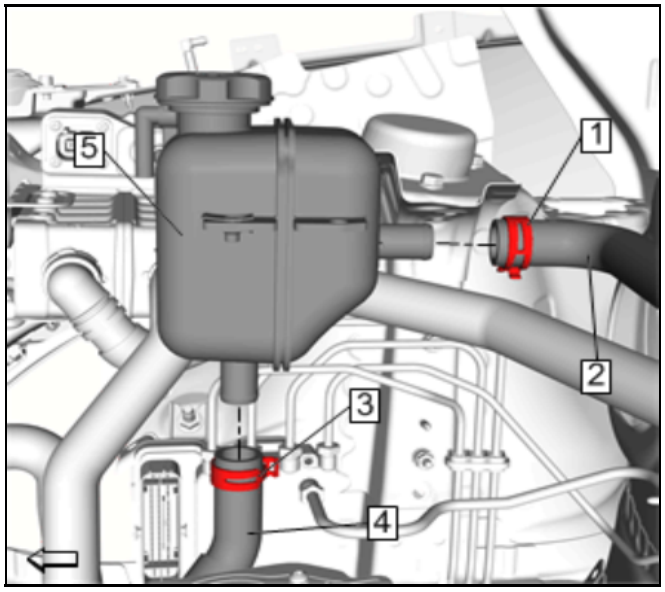
3. Heater Inlet Hose Quick Connect (1)» Disconnect
4. Heater Inlet Hose (2)@ Heater Core Inlet Tube » Remove

Installation Procedure



4530275

1. Heater Inlet Hose (2)@ Heater Core Inlet Tube» Install
2. Heater Inlet Hose Quick Connect (1)» Connect



4500157

3. Install the heater inlet hose (2) to the heater coolant surge tank and engage the clamp (1).
4. Fill the cooling system. *Heater Coolant Heater Draining and Filling on page 5-22*

Auxiliary Heater Inlet Hose Replacement

Special Tools

- *BO-38185* Hose Clamp Pliers

Equivalent regional tools: *Special Tools on page 5-138*

Removal Procedure

Danger: Always perform the High Voltage Disabling procedure prior to servicing any High Voltage component or connection. Personal Protection Equipment (PPE) and proper procedures must be followed.

The High Voltage Disabling procedure includes the following steps:

- ***Identify how to disable high voltage.***
- ***Identify how to test for the presence of high voltage.***
- ***Identify condition under which high voltage is always present and personal protection equipment (PPE) and proper procedures must be followed.***

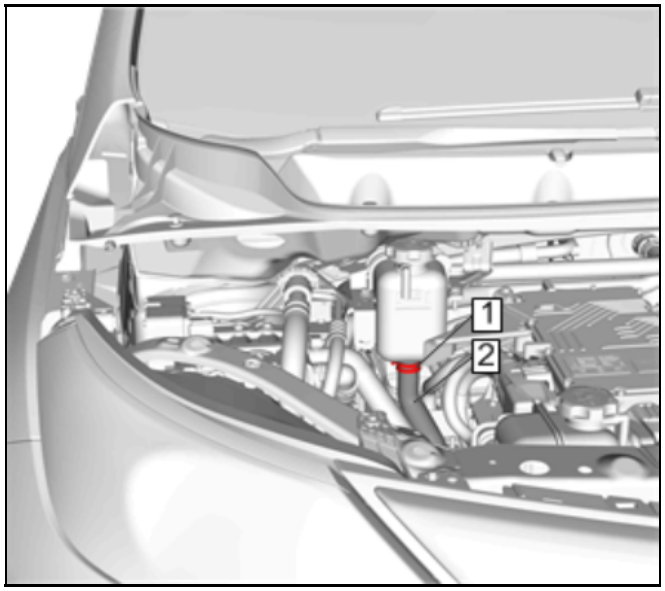
Before working on any high voltage system, be sure to wear the following Personal Protection Equipment:

- ***Safety glasses with appropriate side shields when within 15 meters (50 feet) of the vehicle, either indoors or outdoors.***

- ***Certified and up-to-date Class "0" Insulation gloves rated at 1000V with leather protectors.***
  - ***Visually and functionally inspect the gloves before use.***
  - ***Wear the Insulation gloves with leather protectors at all times when working with the high voltage battery assembly, whether the system is energized or not.***

Failure to follow the procedures may result in serious injury or death.

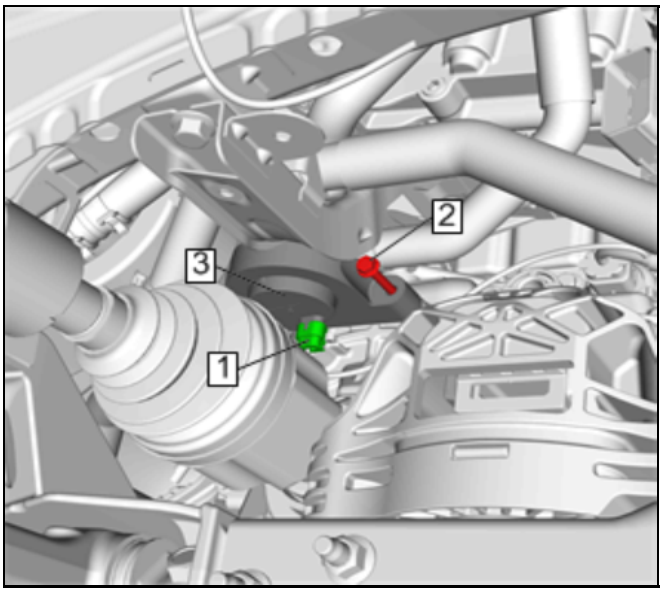
1. Disable the high voltage system.
2. Drain the cooling system. *Heater Coolant Heater Draining and Filling on page 5-22*
3. Front Compartment Air Deflector » Remove — Front Compartment Air Deflector Replacement
4. Front Wheelhouse Liner - Right Side» Remove — Front Wheelhouse Liner Replacement



4530262

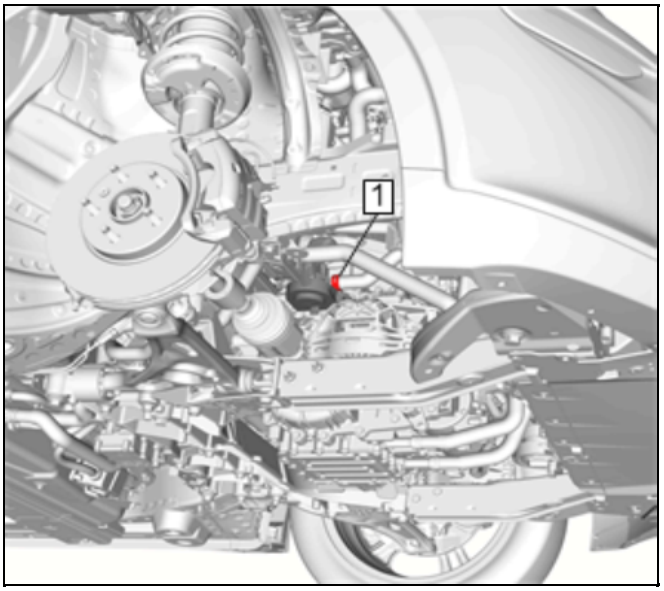
5. Auxiliary Heater Inlet Hose Clamp (1) » Disengage — Hose Clamp Replacement Guidelines - Spring Type

   Use the *BO-38185* Hose Clamp Pliers.
6. Auxiliary Heater Inlet Hose(2) @ Heater Coolant Surge Tank» Remove
7. Raise and support the vehicle.



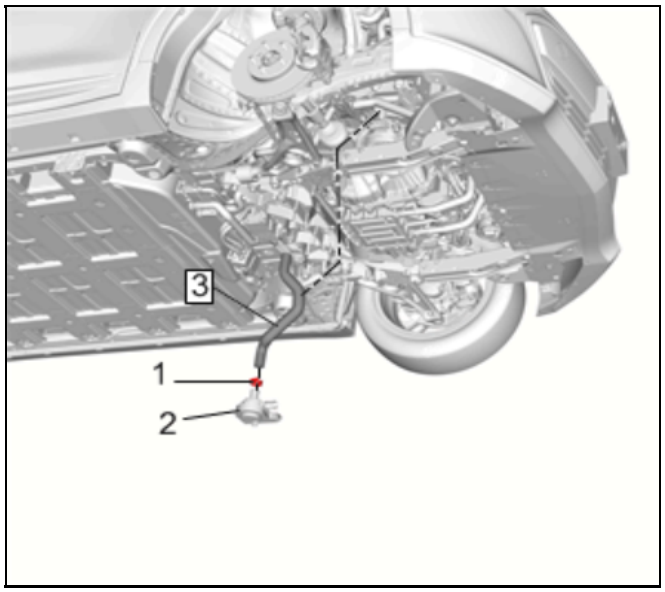
4624883

8. Disconnect the heater coolant pump electrical connector (1).
9. Remove the heater coolant pump bolt (2).
10. Reposition the heater coolant pump on the rubber mount to access the clamp.



4624884

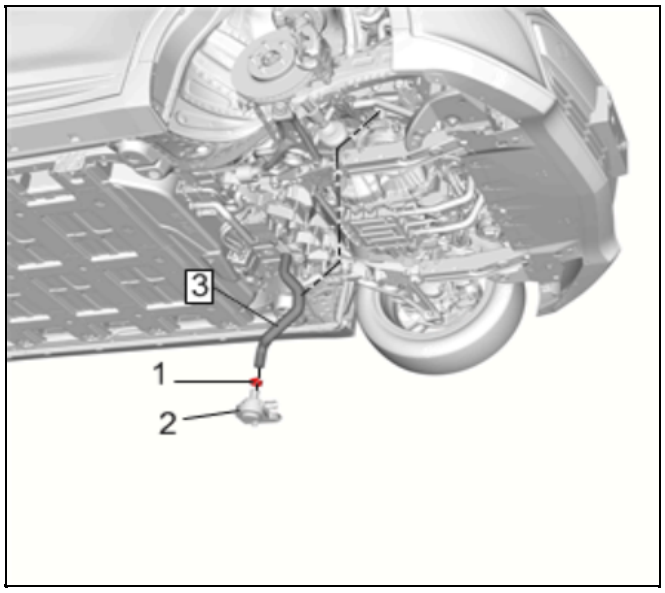
11. Auxiliary Heater Outlet Hose Clamp (1) » Disengage — Hose Clamp Replacement Guidelines - Spring Type
12. Remove the auxiliary heater outlet hose from the heater coolant pump.



4624885

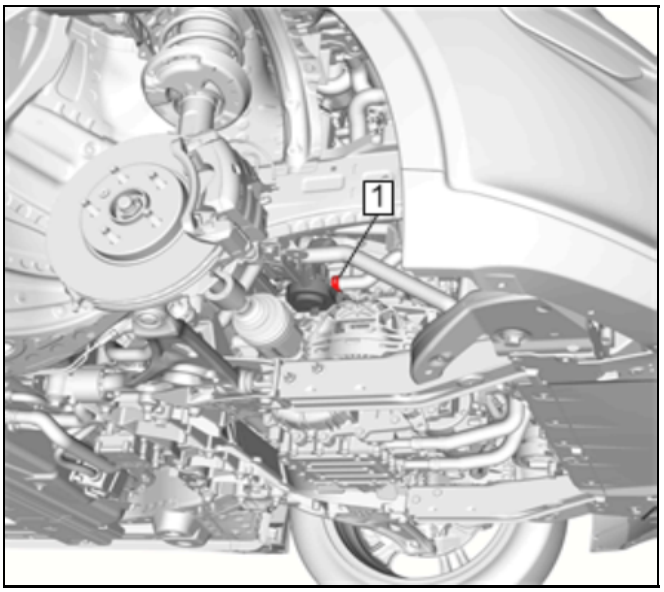
13. Remove the heater coolant pump with the auxiliary heater inlet hose.
14. Auxiliary Heater Inlet Hose Clamp (1) » Disengage — Hose Clamp Replacement Guidelines - Spring Type
15. Auxiliary Heater Inlet Hose (3) @ Heater Coolant Pump (2) » Remove

Installation Procedure



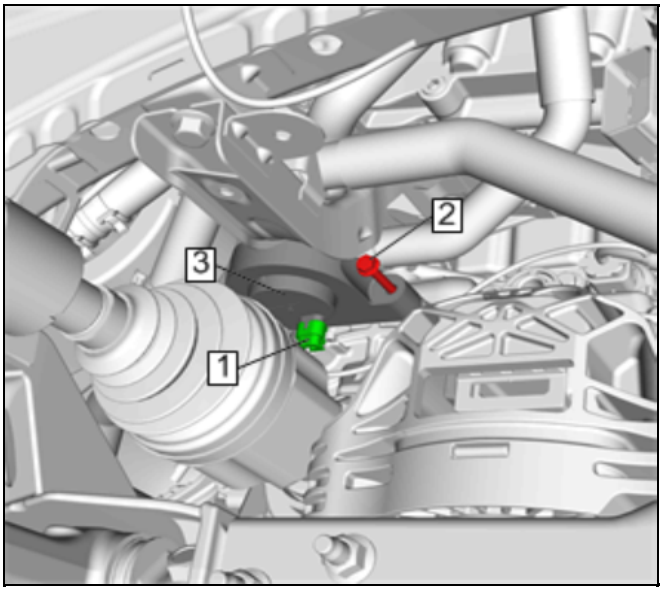
4624885

1. Auxiliary Heater Inlet Hose (3) @ Heater Coolant Pump (2) » Install
2. Auxiliary Heater Inlet Hose Clamp (1) » Engage— Hose Clamp Replacement Guidelines - Spring Type
3. Position the heater coolant pump with the auxiliary heater inlet hose.



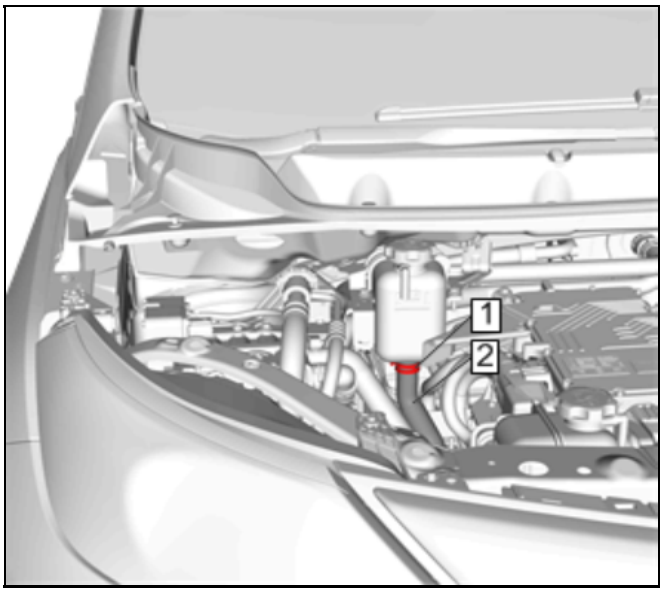
4624884

4. Auxiliary Heater Outlet Hose Clamp (1) » Engage — Hose Clamp Replacement Guidelines - Spring Type



4624883

5. Install and tighten the heater coolant pump bolt (2) to **9 N•m(80 lb in)** .
6. Connect the heater coolant pump electrical connector (1).
7. Lower the vehicle



4530262

8. Auxiliary Heater Inlet Hose(2) @ Heater Coolant Surge Tank» Install
9. Auxiliary Heater Inlet Hose Clamp(1) » Engage— Hose Clamp Replacement Guidelines - Spring Type
10. Front Wheelhouse Liner - Right Side» Install — Front Wheelhouse Liner Replacement
11. Front Compartment Air Deflector » Install — Front Compartment Air Deflector Replacement
12. Fill the cooling system to the proper level. *Heater Coolant Heater Draining and Filling on page 5-22*
13. Enable the high voltage system.
14. Start the engine and check for coolant leaks.

Auxiliary Heater Outlet Hose Replacement

Special Tools

- *BO-38185* Hose Clamp Pliers

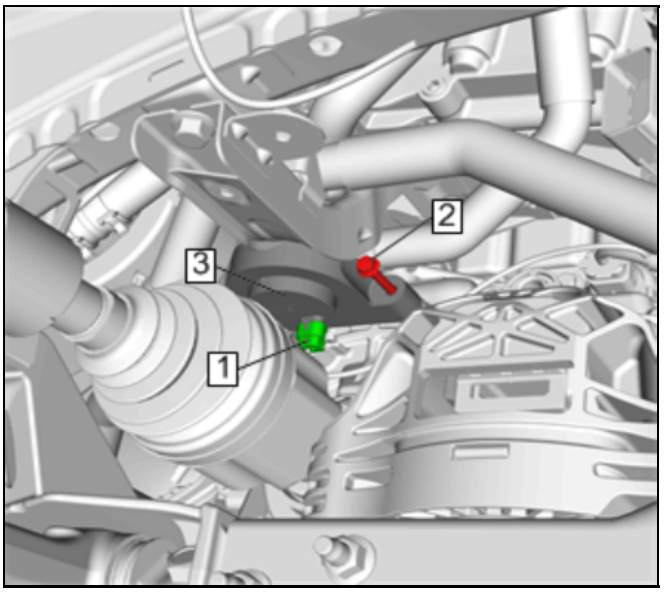
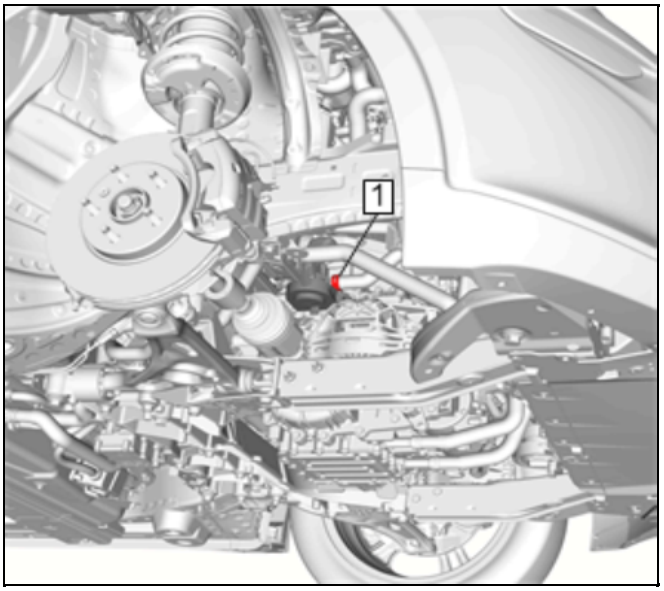
5. Auxiliary Heater Inlet Hose Clamp (1) » Disengage — Hose Clamp Replacement Guidelines - Spring Type

   Use the *BO-38185* Hose Clamp Pliers.
6. Auxiliary Heater Inlet Hose(2) @ Heater Coolant Surge Tank» Remove
7. Raise and support the vehicle.



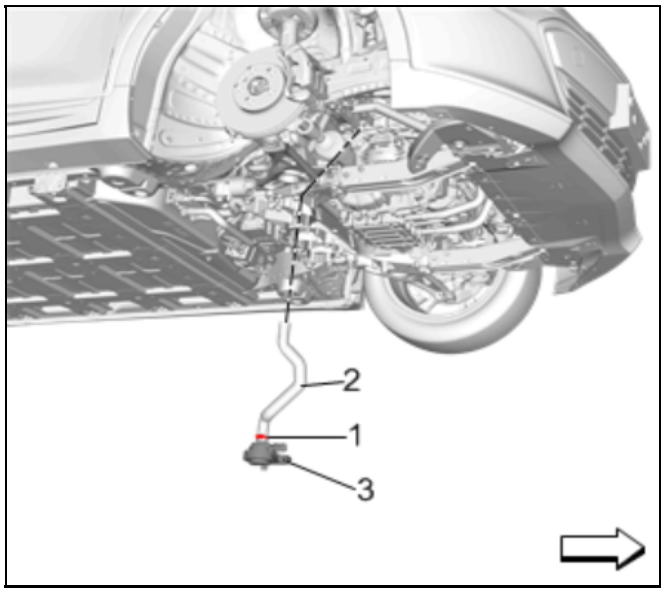
4624883

8. Disconnect the heater coolant pump electrical connector (1).
9. Remove the heater coolant pump bolt (2).
10. Reposition the heater coolant pump on the rubber mount to access the clamp.



4624884

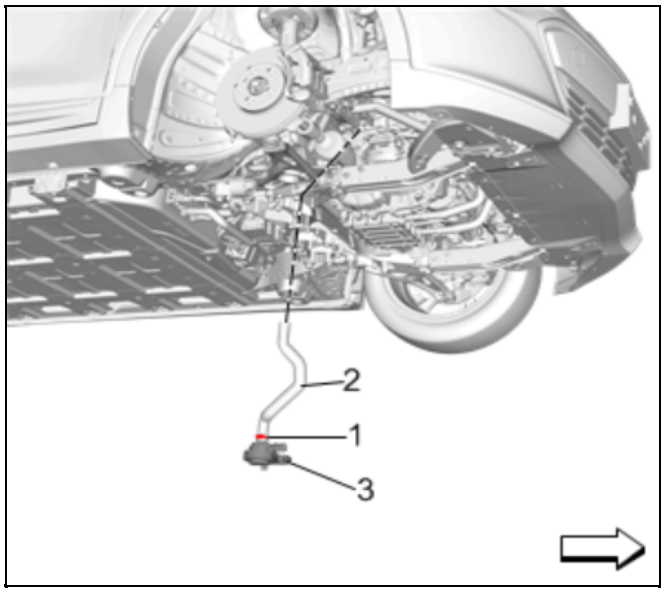
11. Auxiliary Heater Outlet Hose Clamp (1) » Disengage — Hose Clamp Replacement Guidelines - Spring Type
12. Remove the auxiliary heater outlet hose from the heater coolant pump.



4624886

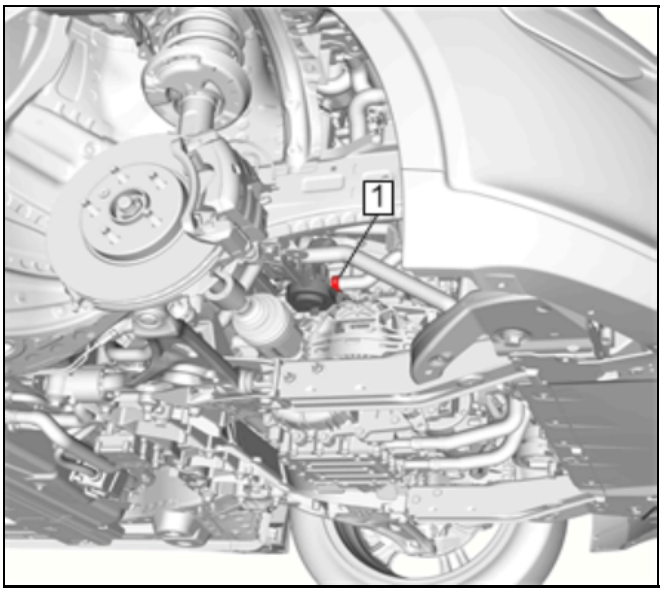
13. Remove the heater coolant pump with the auxiliary heater inlet hose.
14. Auxiliary Heater Inlet Hose Clamp (1) » Disengage — Hose Clamp Replacement Guidelines - Spring Type
15. Heater Coolant Pump (3) @ Auxiliary Heater Inlet Hose (2) » Remove

Installation Procedure



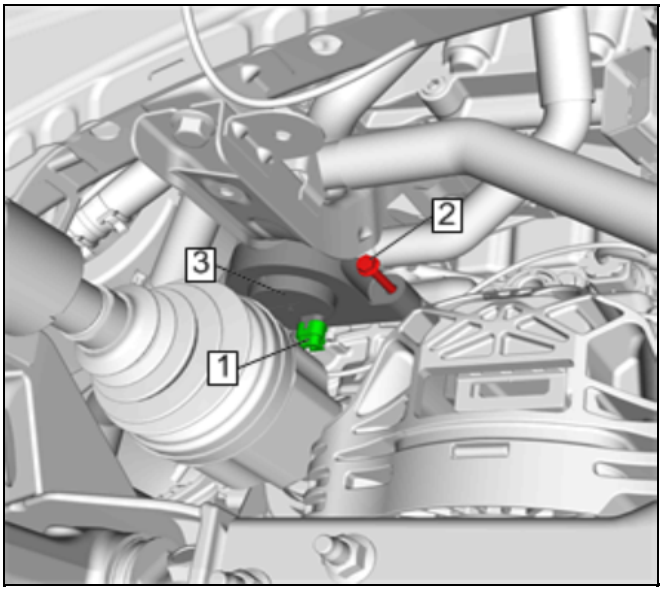
4624886

1. Heater Coolant Pump (3) @ Auxiliary Heater Inlet Hose (2) » Install
2. Auxiliary Heater Inlet Hose Clamp (1) » Engage— Hose Clamp Replacement Guidelines - Spring Type
3. Position the heater coolant pump with the auxiliary heater inlet hose.



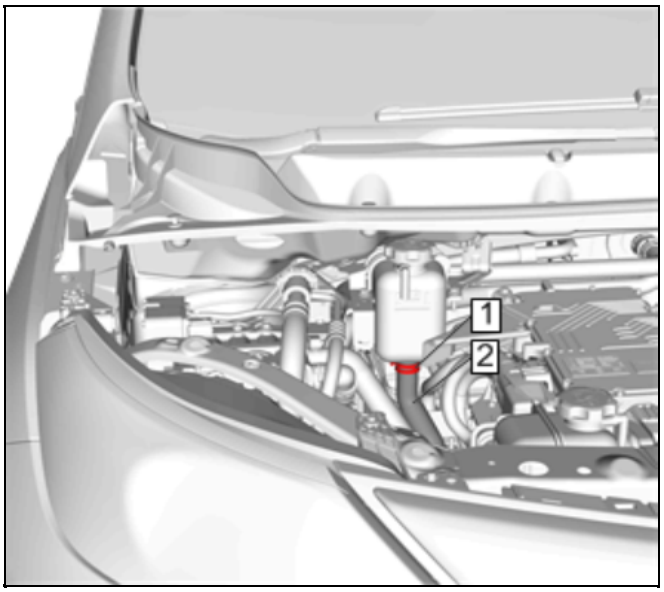
4624884

4. Auxiliary Heater Outlet Hose Clamp (1) » Engage — Hose Clamp Replacement Guidelines - Spring Type



4624883

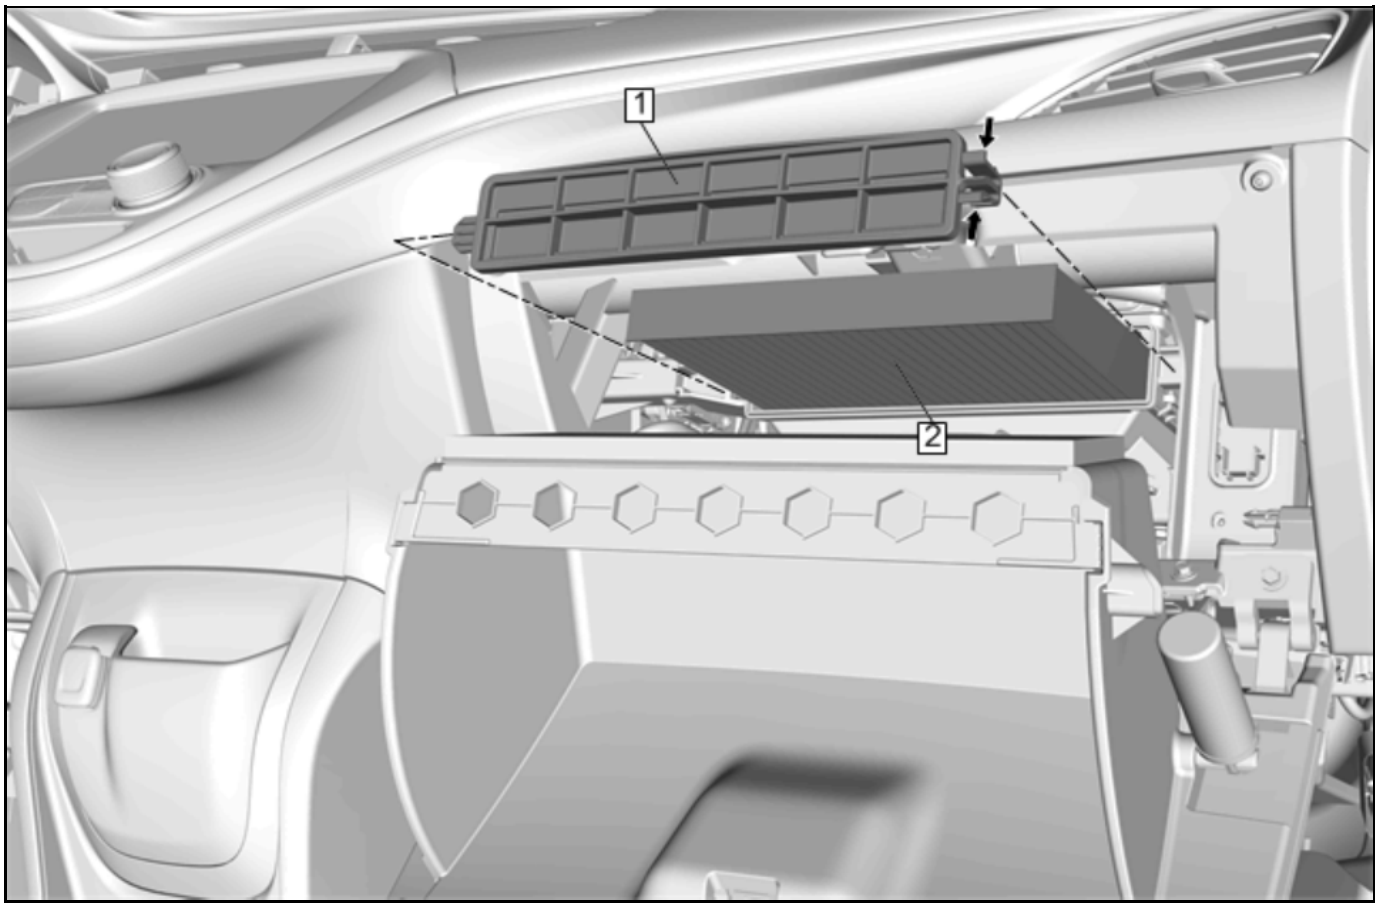
5. Install and tighten the heater coolant pump bolt (2) to **9 N•m(80 lb in)** .
6. Connect the heater coolant pump electrical connector (1).
7. Lower the vehicle



4530262

8. Auxiliary Heater Inlet Hose(2) @ Heater Coolant Surge Tank» Install
9. Auxiliary Heater Inlet Hose Clamp(1) » Engage— Hose Clamp Replacement Guidelines - Spring Type
10. Front Wheelhouse Liner - Right Side» Install — Front Wheelhouse Liner Replacement
11. Front Compartment Air Deflector » Install — Front Compartment Air Deflector Replacement
12. Fill the cooling system to the proper level. *Heater Coolant Heater Draining and Filling on page 5-22*
13. Enable the high voltage system.
14. Start the engine and check for coolant leaks.

Passenger Compartment Air Filter Replacement

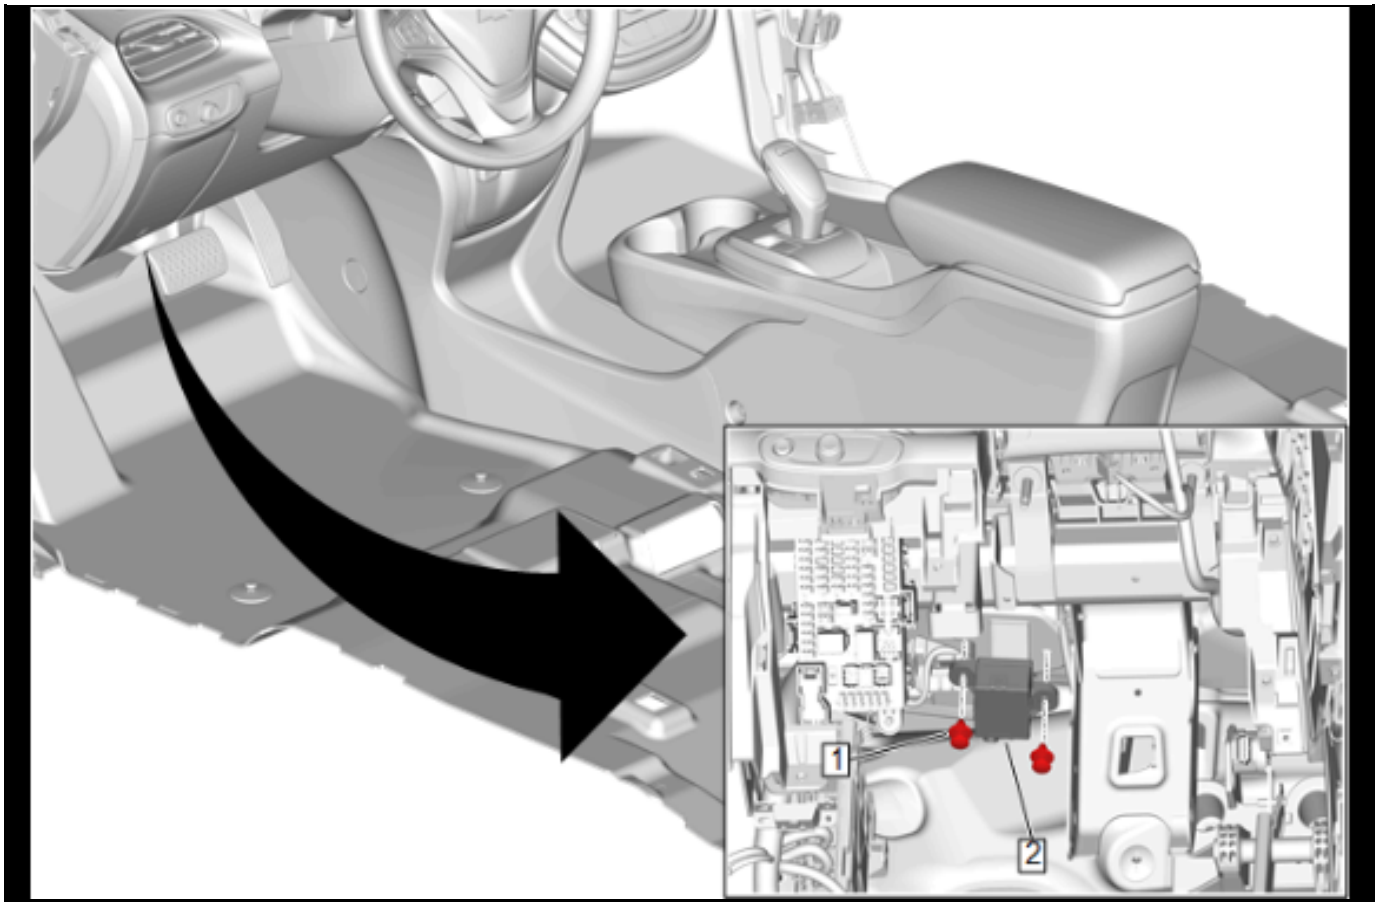


4563419

Passenger Compartment Air Filter Replacement

Callout	Component Name
Preliminary Procedure 1. Open the instrument panel compartment door. 2. Disconnect the instrument panel compartment door dampener from the instrument panel compartment. 3. Squeeze the sides of the instrument panel compartment door and lower the instrument panel compartment door past the stops.	
1	Passenger Compartment Air Filter Cover **Procedure** Push the cover tab and remove the filter cover.
2	Passenger Compartment Air Filter

Passenger Compartment Air Filter Module Replacement

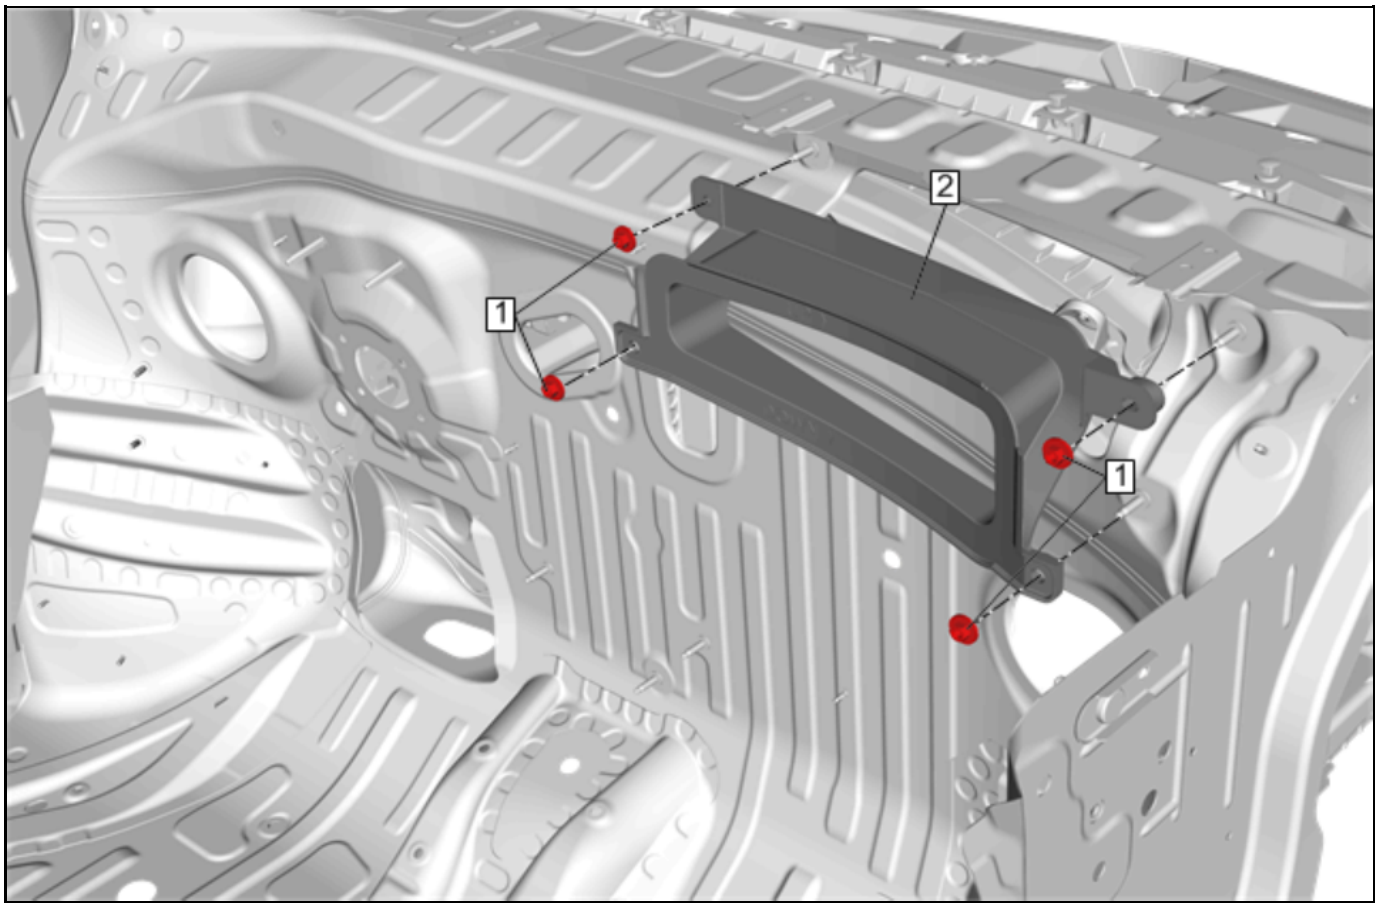


5500318

Passenger Compartment Air Filter Module Replacement

Callout	Component Name
Preliminary Procedures 1. *Floor Front Air Outlet Duct Replacement - Left Side on page 5-114* 2. Disconnect the electrical connector.	
1	Push-Pin Retainer [2x]
2	Passenger Compartment Air Filter Module **Note:** The steering column and instrument panel trim are shown removed for clarity. It is not necessary to remove these items to access the module.

Air Inlet Duct Replacement

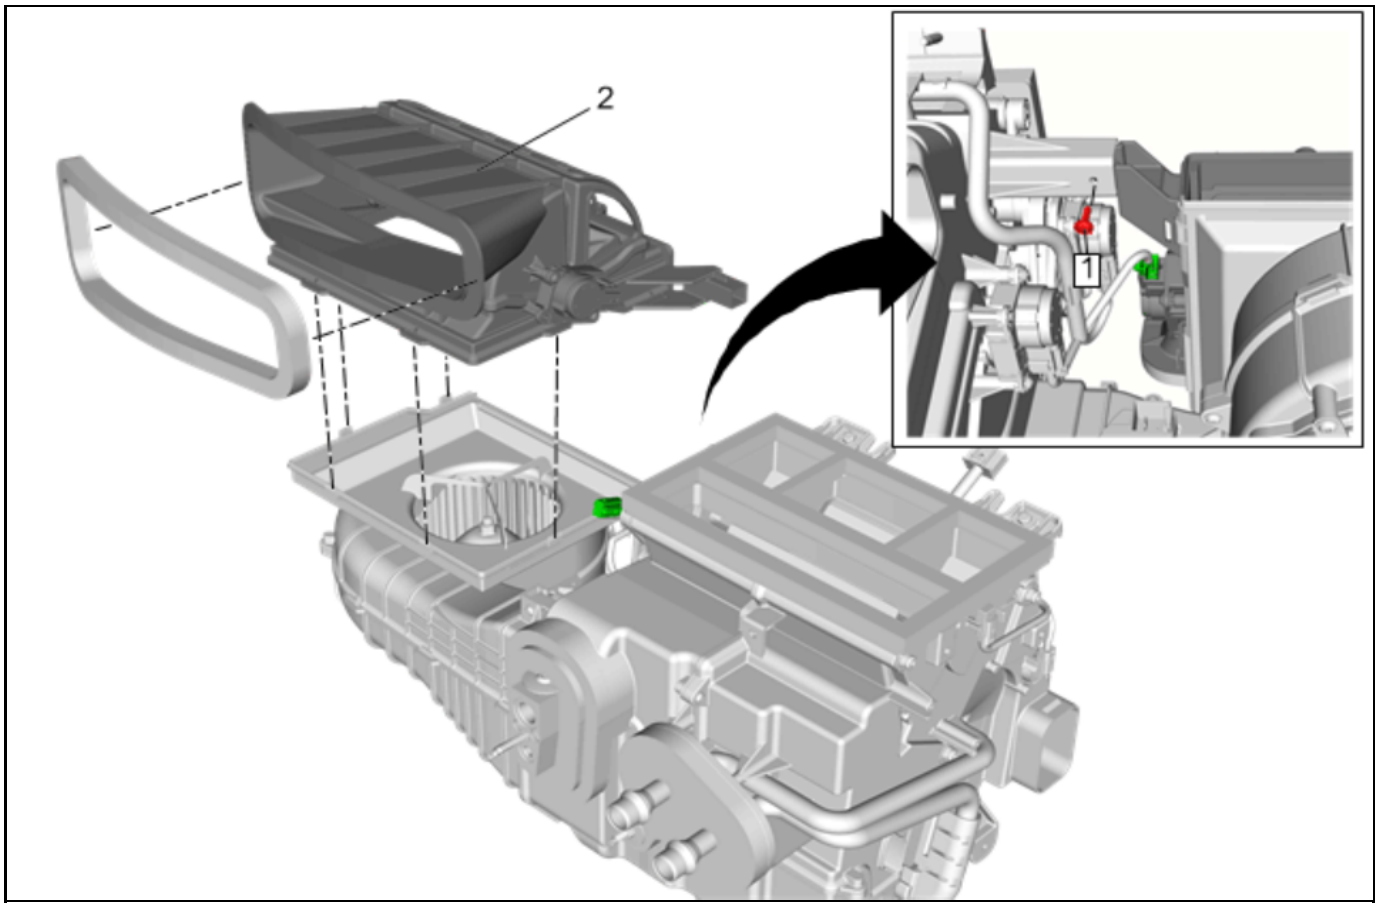


4544241

Air Inlet Duct Replacement

Callout	Component Name
Preliminary Procedures 1. Disconnect the battery negative cable. 2. Remove the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57*	
1	Air Inlet Duct Nut [4x] **Tighten** 3 N•m(27 lb in)
2	Air Inlet Duct **Procedure** 1. Install the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57* 2. Connect the battery negative cable.

Air Inlet Housing Replacement

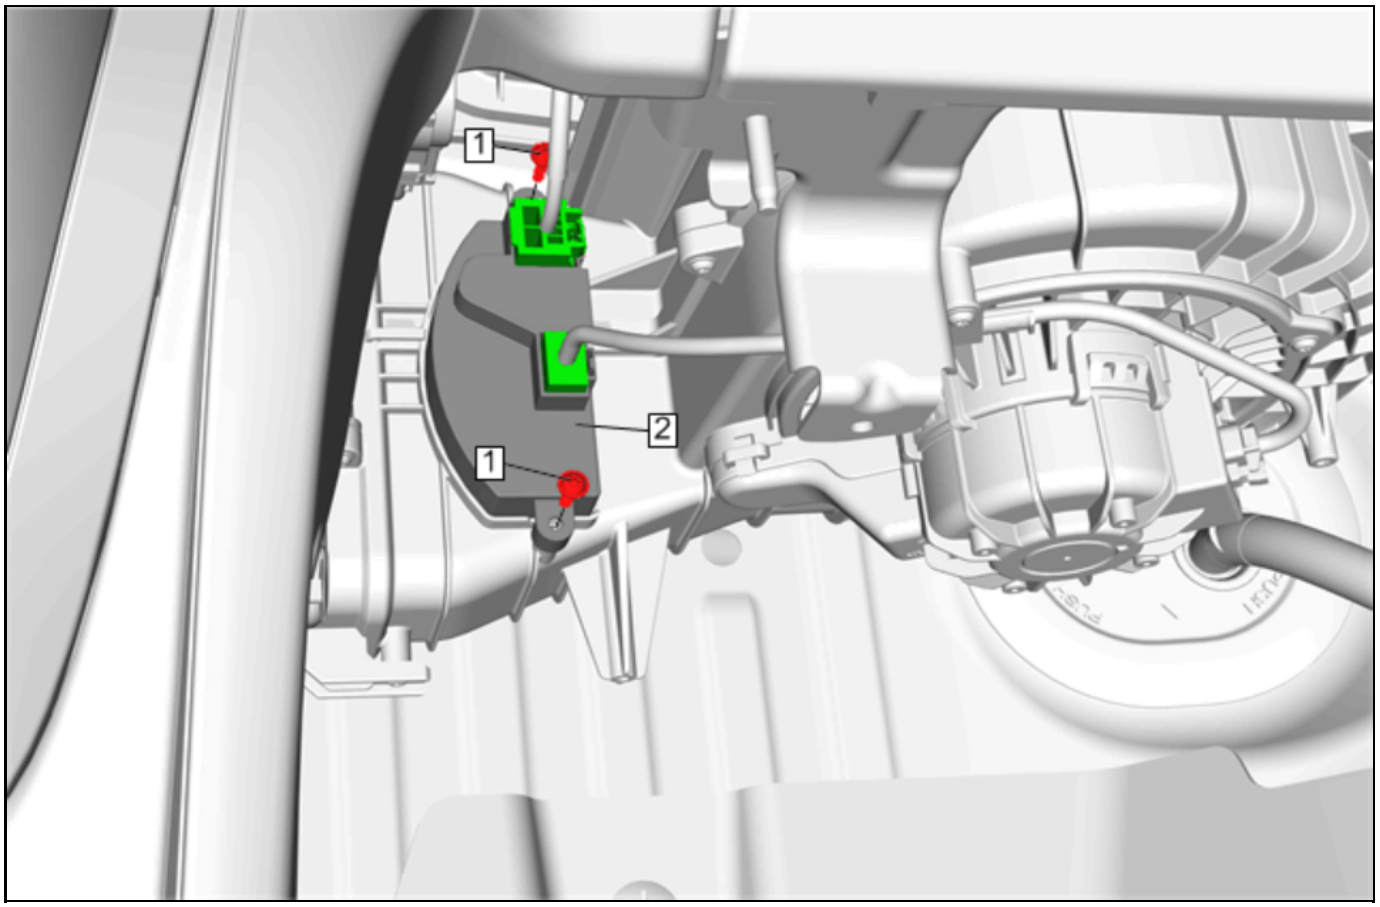


4544247

Air Inlet Housing Replacement

Callout	Component Name
Preliminary Procedure 1. Remove the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57* 2. *Passenger Compartment Air Filter Replacement on page 5-98*	
1	Heater and Air Conditioning Evaporator Case Screw **Tighten** 2.5 N•m(22 lb in)
2	Air Inlet Housing **Procedure** 1. Use the appropriate tool to unlatch the air inlet housing from the upper blower motor housing. 2. Install the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57*

Blower Motor Control Replacement (Module Mounted)

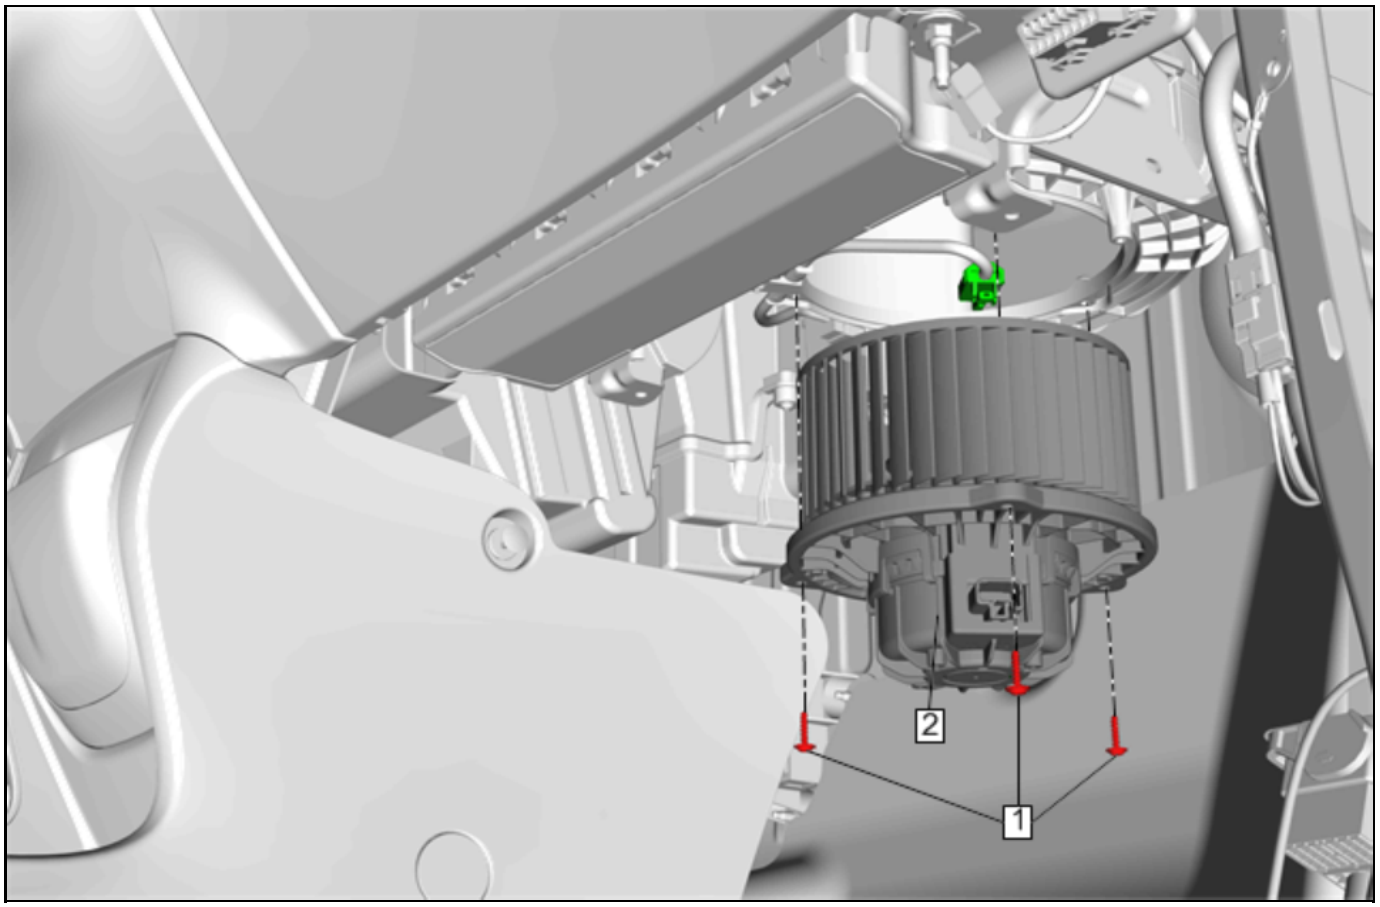


4533266

Blower Motor Control Replacement (Module Mounted)

Callout	Component Name
Preliminary Procedure 1. Disconnect the battery negative cable. 2. *Floor Front Air Outlet Duct Replacement - Right Side on page 5-113*	
1	Blower Motor Control Bolt (Qty: 2)
2	Blower Motor Control **Procedure** 1. Disconnect the blower motor control electrical connector. 2. Connect the battery negative cable.

Blower Motor Replacement

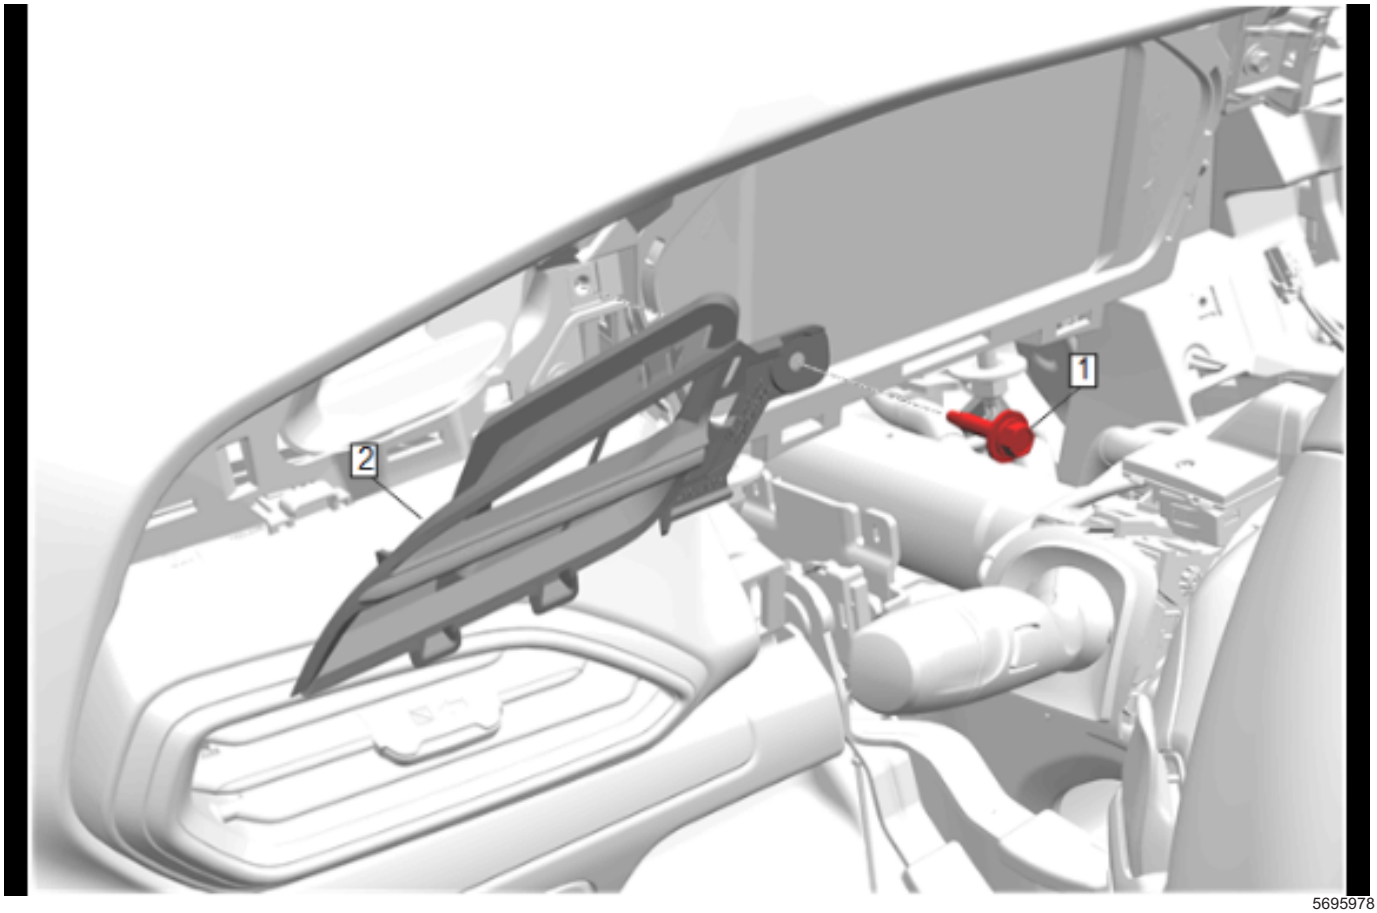


4533267

Blower Motor Replacement

Callout	Component Name
Preliminary Procedures 1. Disconnect the battery negative cable. 2. *Floor Front Air Outlet Duct Replacement - Right Side on page 5-113*	
1	Blower Motor Bolt (Qty: 3)
2	Blower Motor **Procedure** 1. Disconnect the blower motor electrical connector. 2. Remove the blower motor harness fastener and reposition the harness. 3. Connect the battery negative cable.

Side Window Defogger Outlet Grille Replacement - Left Side



5695978

Side Window Defogger Outlet Grille Replacement - Left Side

Callout	Component Name
Preliminary Procedure Instrument Panel Cluster Trim Plate Replacement

Equivalent regional tools: *Special Tools on page 5-138*

Removal Procedure

Danger: Always perform the High Voltage Disabling procedure prior to servicing any High Voltage component or connection. Personal Protection Equipment (PPE) and proper procedures must be followed.

The High Voltage Disabling procedure includes the following steps:

- ***Identify how to disable high voltage.***
- ***Identify how to test for the presence of high voltage.***

- ***Identify condition under which high voltage is always present and personal protection equipment (PPE) and proper procedures must be followed.***

Before working on any high voltage system, be sure to wear the following Personal Protection Equipment:

- ***Safety glasses with appropriate side shields when within 15 meters (50 feet) of the vehicle, either indoors or outdoors.***
- ***Certified and up-to-date Class "0" Insulation gloves rated at 1000V with leather protectors.***
  - ***Visually and functionally inspect the gloves before use.***
  - ***Wear the Insulation gloves with leather protectors at all times when working with the high voltage battery assembly, whether the system is energized or not.***

Failure to follow the procedures may result in serious injury or death.

1. Disable the high voltage system.
2. Drain the cooling system. *Heater Coolant Heater Draining and Filling on page 5-22*

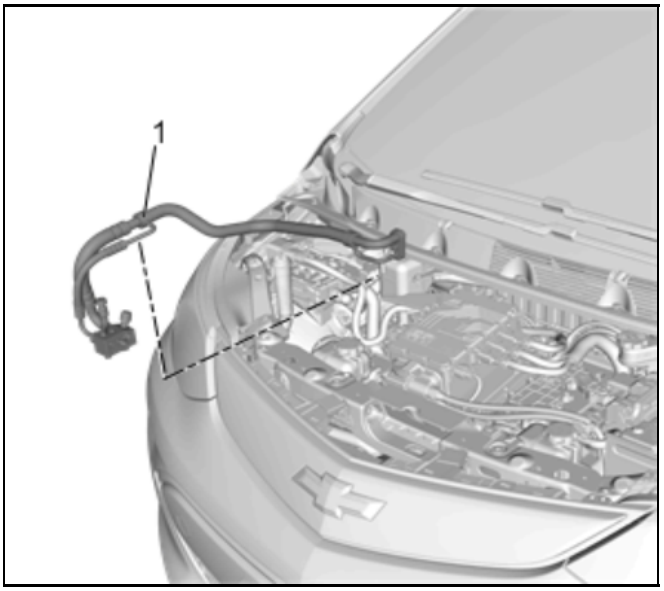
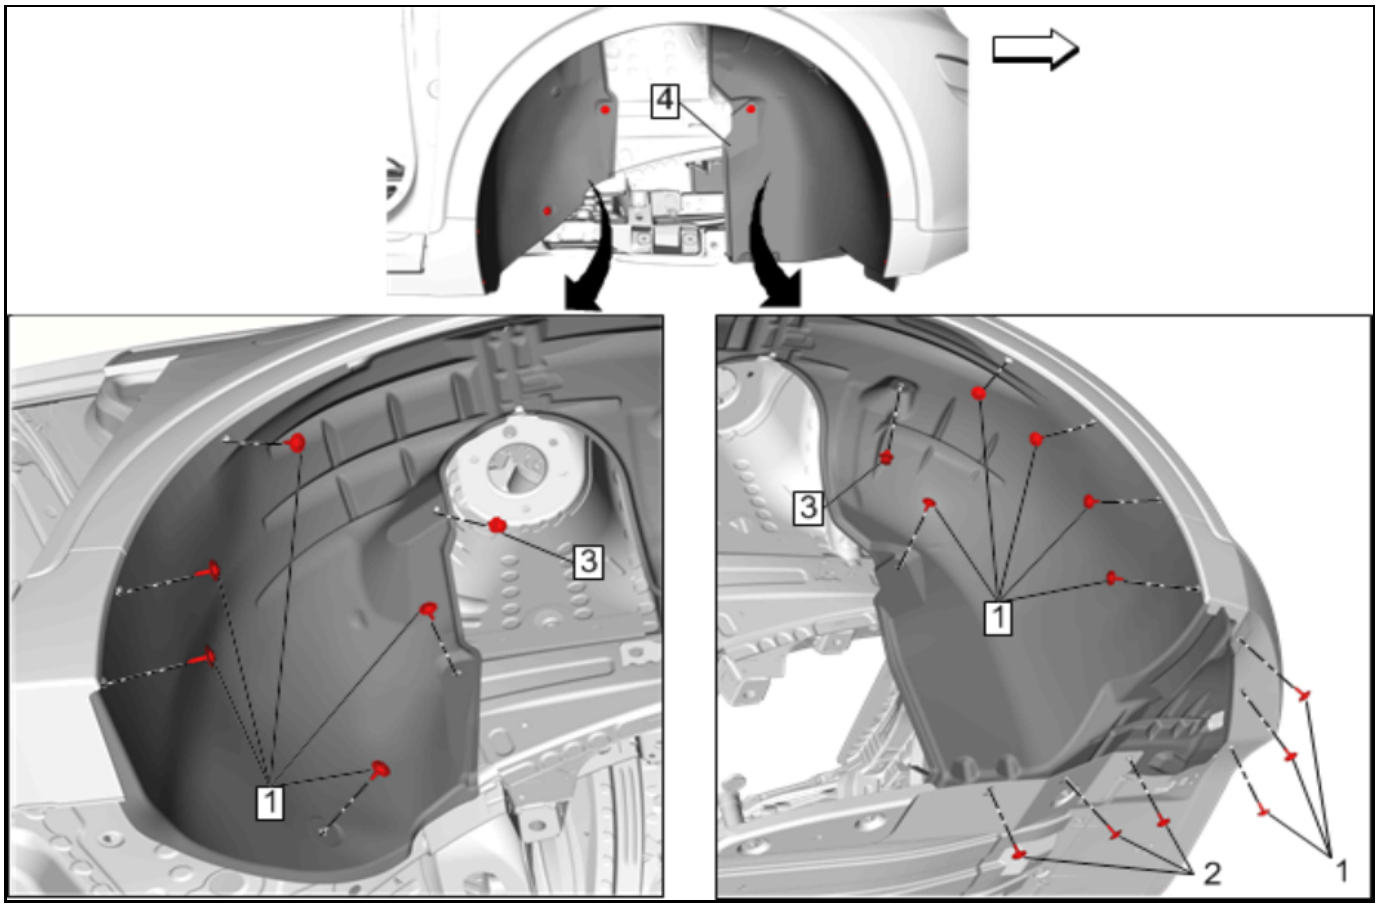
11. Install the high voltage cable retainer (2).
12. Connect the high voltage cable connector (1) to the heater coolant heater.



4530280

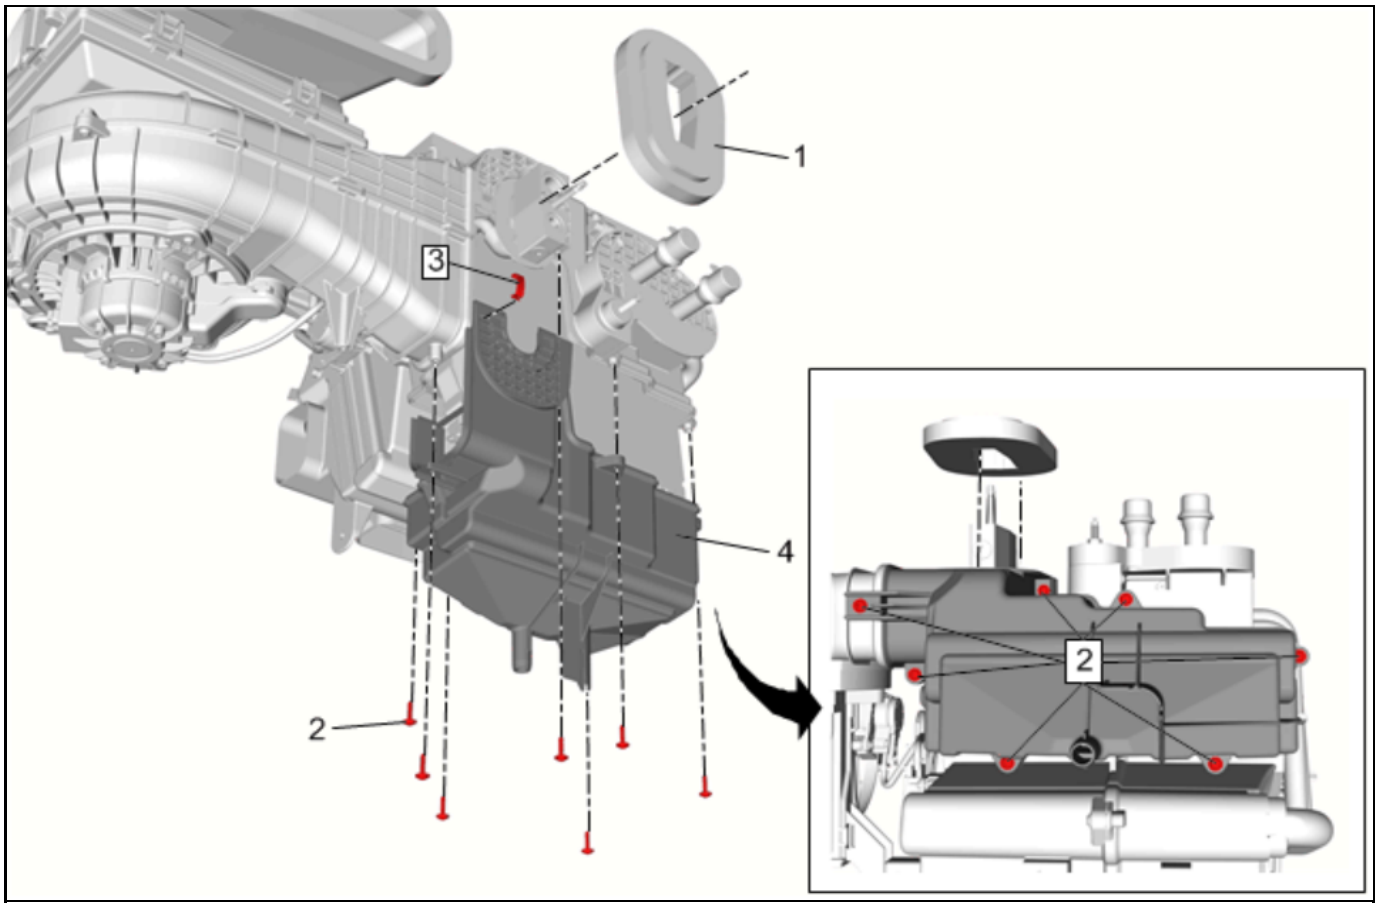
13. Air Conditioning Evaporator Hose (1) » Install — *Air Conditioning Evaporator Hose Replacement on page 5-42*



4887935

14. Front Wheelhouse Liner - Right Side (4) » Install — Front Wheelhouse Liner Replacement
15. Fill the cooling system. *Heater Coolant Heater Draining and Filling on page 5-22*
16. Enable the high voltage system.

Heater Case Replacement



4648272

Heater Case Replacement

Callout	Component Name
Preliminary Procedures 1. Disconnect the battery negative cable. 2. Remove the heater and air conditioning evaporator and blower module. *Heater and Air Conditioning Evaporator and Blower Module Removal and Installation on page 5-57*	
1	Heater and Air Conditioning Evaporator and Blower Module Seal
2	Heater Case Screw [7x] **Tighten** 2.5 N•m (22 lb in)
3	Heater and Air Conditioning Evaporator Case Clip
4	Heater Case **Procedure** Separate the heater case from the module assembly.

Description and Operation

Heating and Air Conditioning System Description and Operation

Heating

The heating system uses a high voltage heater to provide heat to the passenger compartment. The high voltage heater is used when the passenger compartment heat is requested. The high voltage heater provides different levels of heat depending on the amount of heat needed and outside temperature.

The HVAC Control Module turns on the coolant pump and monitors the temperature sensors in the passenger compartment, outside air and high voltage heater to determine the position of the coolant flow control valve and if the high voltage heater is needed. Passenger compartment heat is provided by air flowing through the heater core. The heater core is heated by coolant from the high voltage heater.

The heating system circulates a 50/50 mixture of Dex-cool and deionized water.

Air Conditioning

The A/C system uses the refrigerant R-1234yf which is a gas at very low temperatures and can transfer heat from the passenger compartment and high voltage battery to the outside air. The A/C system is mechanically protected with the use of a high pressure relief valve on the A/C compressor. If the refrigerant pressure sensor were to fail or if the A/C system becomes restricted and the refrigerant pressure continued to rise, the high pressure relief will open and release refrigerant from the system.

The high voltage electric A/C compressor is a self contained high voltage inverter, electric motor, and direct coupled compressor. The electric A/C compressor has the ability to run and provide cooling performance while the vehicle is not running. The electronic climate control module and the Vehicle Integration Control Module (VICM) will command the electric A/C compressor to a speed necessary to maintain a desired cooling level rather than cycle the electric A/C compressor on and off.

The electric A/C compressor builds pressure and adds heat to the refrigerant gas. The refrigerant gas flows from the electric A/C compressor to the condenser where heat is transferred to the outside air when the refrigerant condenses from a gas to a liquid. The liquid refrigerant then flows to a thermal expansion valve (TXV) on the battery chiller. The TXV lowers the pressure of the liquid refrigerant which makes the refrigerant expand from a liquid to a vapor. The low pressure refrigerant vapor flows into the battery chiller and begins to boil and change into a gas as the refrigerant absorbs heat from the battery coolant also flowing inside the battery chiller. The battery coolant and refrigerant are separated by several plates inside the battery chiller. The liquid refrigerant also flows to a second TXV on the evaporator. The low pressure refrigerant vapor flows from the TXV into the evaporator and begins to boil and change into a gas as the refrigerant absorbs heat from the passenger compartment air that is flowing through the outside of the evaporator. The moister in the passenger compartment air condenses on the outside of the evaporator and flows down to the bottom of the HVAC module where it drains outside the passenger compartment through a drain hose. The low pressure refrigerant gas then flows from the battery chiller and the evaporator back to the electric A/C compressor where the cycle is repeated.

Description and Operation

Automatic HVAC Description and Operation

The air temperature and the air delivery description and operation are divided into the following areas:

- HVAC Control Components
- Air Speed
- Air Delivery
- Heating and A/C Operation
- Recirculation Operation
- Automatic Operation
- Coolant Heater Control Module
- Coolant and A/C System Refrigerant

HVAC Control Components

HVAC Control

The HVAC control contains all the switches and knobs which are required to control the functions of HVAC and serve as interface between the operator and the HVAC control module. The HVAC controls are part of the radio/HVAC controls assembly. The selected values are passed to the HVAC control module via serial data.

HVAC Control Module

The HVAC control module is a serial data device that interfaces between the operator and the HVAC system to maintain and control desired air temperature and air distribution settings. The battery positive voltage circuit provides power that the HVAC control module uses for keep alive memory. If the battery positive voltage circuit loses power, all HVAC DTCs and settings will be erased from keep alive memory. The body control module (BCM), which is the vehicle power mode master, provides a device ON-Signal. The HVAC control module provides blower, air delivery mode and air temperature settings.

Actuators

Doors in the HVAC case assembly are used to control air flow. The HVAC control module operates the doors through the use of actuators, with one actuator being used for each door. The system has the following air control doors and associated actuators: mode, temperature, and recirculation.

Each actuator used in the system is a 5-wire stepper motor. The HVAC control module supplies a 12 V reference voltage to the stepper motor and energizes the 4 stepper motor coils with a pulsed ground signal. The stepper motor moves the associated air control door into the calculated position in order to reach the selected position. The null point of the stepper motor will be calibrated, if the stepper motor is new. When the stepper motor is calibrated, the HVAC control module can drive the applicable coil to reach exactly the desired position of the air control door.

Blower Motor Control Module

The blower motor control module controls the speed of the blower motor by increasing or decreasing the voltage drop on the ground side of the blower motor. The HVAC control module provides a low side pulse width modulation (PWM) signal to the blower motor control module via the blower motor speed control circuit. As the requested blower speed increases, the HVAC control module increases the amount of time that the speed signal is modulated to ground. As the requested blower speed decreases, the HVAC control module decreases the amount of time that the signal is modulated to ground.

Duct Temperature Sensors

The air temperature sensors are 2-wire negative temperature co-efficient thermistors. The sensors operate within a temperature range of -40 to +85°C (-40 to +185°F). The sensors are installed in the air distribution ducts and measure the temperature of the air that streams from the ducts. The HVAC control module uses these values to calculate the mixed air door position.

A/C Refrigerant High Pressure Sensor

The A/C refrigerant pressure sensor is a 3-wire piezoelectric pressure transducer. A 5 V reference voltage, low reference, and signal circuits enable the sensor to operate. The A/C pressure signal can be between 0.2–4.8 V. When the A/C refrigerant pressure is low, the signal value is near 0 V. When the A/C refrigerant pressure is high, the signal value is near 5 V. The engine control module (ECM) converts the voltage signal to a pressure value. When pressure is too high or too low, the ECM will not allow the A/C compressor to engage.

A/C Refrigerant Low Pressure Sensor

The A/C refrigerant pressure sensor is a 3-wire piezoelectric pressure transducer. A 5 V reference voltage, low reference, and signal circuits enable the sensor to operate. The A/C pressure signal can be between 0.2–4.8 V. When the A/C refrigerant pressure is low, the signal value is near 0 V. When the A/C refrigerant pressure is high, the signal value is near 5 V. The Hybrid/EV Powertrain Control Module 2 monitors the low side refrigerant pressure through the A/C pressure sensor.

A/C Compressor

The AC compressor function is to provide refrigerant flow in the AC refrigerant loop to help cool down the cabin, help dehumidify the air in a defrost mode and help maintain the battery temperature. Rather than a more-typical pulley, the A/C compressor uses a 3-phase alternating current, high voltage electric motor to operate. It has an on-board inverter that takes high voltage direct current from the vehicle's high voltage battery and inverts it to alternating current for the motor. The AC compressor may be activated when any of the three following events occur:

- The customer selects Heat and A/C
- The HVAC system is set to fan only but the customer selects defrost mode
- The High Voltage Battery thermal system requests the AC compressor on to help maintain the battery temperature

The A/C compressor contains an integrated control module. The A/C compressor control module operates and monitors the A/C compressor, and communicates with other modules via serial data. The A/C compressor

control module reports any malfunctions to the hybrid/EV powertrain control module 2, which sets the appropriate DTC for the malfunction.

The hybrid/EV powertrain control module 2 uses values from the A/C refrigerant pressure sensor, duct temperature sensors, ambient air temperature sensor , passenger compartment temperature sensor, battery cell temperature sensors, battery coolant temperature sensors, and battery coolant pumps to determine the speed at which the compressor will operate. This message is sent from the hybrid/EV powertrain control module 2 to the A/C compressor control module via serial data message.

Ambient Light/Sunload Sensor

The ambient light/sunload sensor includes the sunload sensor and passenger compartment temperature sensor.

This sensor assembly provides information about:

- Sun heat intensity
- Passenger compartment temperature

The solar sensor is connected to ground and to a 5 V stabilized voltage supply through the HVAC control module. As the sunload increases, the sensor signal voltage also increases and vice versa. The signal varies between 1.4–4.5 V and is provided to the HVAC control module.

The passenger compartment temperature sensor is a negative temperature co-efficient thermistor. A signal and low reference circuit enables the sensor to operate. As the air temperature increases, the sensor resistance decreases. The sensor signal varies between 0–5 V.

Bright or high intensity light causes the vehicles interior temperature to increase. The HVAC system compensates for the increased temperature by diverting additional cool air into the vehicle.

Windshield Temperature and Inside Moisture Sensor

The windshield temperature and inside moisture sensor includes the relative humidity sensor, windshield temperature sensor and humidity sensing element temperature sensor.

This sensor assembly provides information about:

- Relative humidity level at windshield (compartment side)
- Temperature of the windshield inside (compartment side)
- Temperature of the humidity sensor element

The relative humidity sensor measures the relative humidity of the compartment side of the windshield. It also detects the temperature of the windshield surface on the passenger compartment side. Both values are used as control inputs for the HVAC control module application to calculate the fog risk on windshield compartment side and ability to reduce fuel consumption by decreasing A/C compressor power to a minimum without causing any fog. The sensor will also enable partial recirculation mode in order to improve heat-up performance of the passenger compartment under cold ambient temperature conditions without the risk of mist build-up on the windshield. The humidity sensor element temperature sensor supplies the temperature of the humidity sensor element.

The B160 Inside Air Moisture and Windshield Temperature Sensor is a LIN device, and the windshield temperature and humidity values are transmitted to the HVAC control module via serial data.

HVAC Coolant Pump

The coolant heater pump is controlled by a relay. When operating conditions exist that requires coolant flow, the HVAC control module turns ON the heater coolant pump by applying ground to the relay control circuit which energizes the heater coolant pump relay.

Air Ionizer (KEM)

The ionizer is a method of electronically cleaning the air to improve the air quality in the vehicle cabin. The air ionizer electrodes produce positive and negative ions to reduce certain pollutants and odors. The ionizer uses a battery voltage circuit, ground circuit, and a serial data signal from the HVAC control module to operate. When the air ionizer is enabled, the HVAC control module will send a serial data message for the ionizer to operate when the blower is on.

Refer to the owners manual for information regarding operation of the air ionizer.

Air Speed

The blower control switch is part of the HVAC faceplate control. The selected value of the blower switch position is sent to the HVAC control module via serial data.

The blower motor control circuitry is integrated within the blower motor control module. The HVAC control module provides a ground pulse width modulation (PWM) signal to the blower motor control module to request a specific motor speed. The blower motor control module translates the PWM signal and drives the motor accordingly.

Afterblow

Afterblow is a feature that dries the evaporator core by operating the blower motor after the engine is turned OFF under certain conditions. This reduces the amount of microbial growth that can create undesirable odors. For additional information on afterblow, the default setting, and changing the setting, refer to Afterblow Configuration.

Air Delivery

The HVAC control module controls the distribution of air within the passenger compartment by the use of the mode actuator. The modes that may be selected are:

- Defrost
- Defog
- Panel
- Floor
- BiLevel

In auto mode, the air delivery mode is controlled automatically based on cooling/warming needs of the compartment. The desired air distribution mode can be selected with the air distribution buttons at the HVAC faceplate control. The HVAC control delivers the values to the HVAC control module via serial data. The HVAC control module controls the mode actuator so that it drives the door to the calculated position. Depending

on the position of the door, air is distributed through various ducts leading to the outlets in the dash. Turning the mode door to the defrost position, the HVAC control module will move the recirculation actuator to outside air, reducing window fogging. When defrost is selected, the blower motor will be activated. The HVAC control module enables a high volume of air delivered to the front defrost vents. A/C is available in all modes.

The rear window defogger does not affect the HVAC system.

Recirculation Operation

The recirculation switch is integrated into the HVAC control. The selected recirculation setting is sent to the HVAC control module via LIN-Bus. The HVAC control module controls the air intake using the recirculation actuator. In recirculation mode the recirculation door is positioned to block outside air from entering and circulate the air within the vehicle. In outside air mode the recirculation door is positioned to route outside air into the vehicle.

Recirculation is only available if the defrost mode is not active. When the defrost mode is active, the recirculation actuator positions the recirculation door so that outside air is circulated to the windshield to reduce fogging.

In automatic mode the values of the sensors are used as inputs for the HVAC control module to calculate the fog risk on passenger compartment side of the windshield. The A/C compressor and the defrost mode may activated to prevent or remove fog on the passenger compartment side of the windshield.

Heating and A/C Operation

The purpose of the heating and A/C system is to provide heated and cooled air to the interior of the vehicle. The A/C system will also remove humidity from the interior and reduce windshield fogging. Regardless of the temperature setting, the following can affect the rate that the HVAC system can achieve the desired temperature:

- Ambient air temperature
- Difference between inside and desired temperature
- Blower motor speed setting
- Mode setting
- Air conditioning control module operation
- Hybrid/EV powertrain control module 2 operation
- Coolant heater control module

Selecting AUTO or pressing the Heat and A/C button enables the HVAC control module to determine whether to request A/C compressor or coolant heater activation. Based on the thermal conditions of the vehicle the HVAC control module sends a serial data message to the hybrid/EV powertrain control module 2 for the A/C request. The hybrid/EV powertrain control module 2 will request the A/C compressor control Module to engage A/C. The HVAC control module sends the heating request to the coolant heater control module to produce heat.

Fan Only mode will disable all heating and cooling of the vehicle unless overridden by dehumidification requirements.

Automatic Operation

The user can select to operate the Blower, Recirculation and Air Delivery operations in auto per auto operation mode.

To put the HVAC system in full automatic mode, the following is required:

1. The auto button must be pressed.
2. The system indicates that all 3 functions are being operated automatically by lighting the auto button LED.

When the auto button is pressed, the system responds by putting the blower, air delivery and recirculation into auto mode. If any of these functions are adjusted then the auto button indication shall go off and the function will leave auto operation and follow the user requested setting: auto, blower, air delivery and recirculation. In this setting the blower request is adjusted to quickly heat the cabin initially. After comfort is reached, the blower speed is minimized to reduce noise and temperature drifts.

Under cold ambient temperatures, the automatic HVAC system provides heat in the most efficient manner. The operator can select an extreme temperature setting but the system will not warm the vehicle any faster. Under warm ambient temperatures, the automatic HVAC system also provides air conditioning in the most efficient manner. Selecting an extreme cool temperature will not cool the vehicle any faster.

In automatic mode the values of the windshield temperature and inside moisture sensor are used as control inputs for the HVAC control module application to calculate the fog risk on the passenger compartment side of the windshield and ability to reduce fuel consumption by decreasing A/C compressor power to a minimum without causing any fog. The A/C compressor and the defrost mode may be activated to prevent or remove fog on the passenger compartment side of the windshield. The sensor will also enable partial recirculation mode in order to improve heat-up performance of the passenger compartment under cold ambient temperature conditions without the risk of mist build-up on the windshield.

Coolant Heater Control Module

The coolant heater control module is a high voltage electric heater. High voltage is supplied from the hybrid/EV battery pack. A fused battery input, ground, and LIN serial data from the HVAC control module are used to control the operation of the coolant heater control module.

The coolant heater control module is an essential element of the hybrid heating system. When cabin heat is required, the HVAC control module commands the coolant heater control module activation via serial data, and commands the coolant pump relay on to operate the coolant pump to circulate the coolant. Heated coolant from the coolant heater will meet HVAC temperature demands. The coolant heater control module will be commanded OFF if the coolant temperature exceeds the desired temperature.

Heater coolant enters the heater core through the inlet heater hose, in a pressurized state. The heater core is located inside the HVAC module. The ambient air drawn through the HVAC module, absorbs the heat of

the coolant flowing through the heater core. Heated air is distributed to the passenger compartment, through the HVAC module, for passenger comfort. Opening or closing the air temperature door controls the amount of heat delivered to the passenger compartment. The coolant exits the heater core through the return heater hose and recirculates back to the system.

Coolant and A/C System Refrigerant

For information on coolant, coolant flow, A/C refrigerant, and the A/C refrigerant cycle, refer to *Heating and Air Conditioning System Description and Operation on page 5-138*.

Description and Operation

Data Link Communications Description and Operation

Note: This is an overview of different serial data buses used by GM devices to communicate with each others. Use *Data Communication Schematics on page 6-4* to find out which serial data buses are configured for a specific vehicle.

Data Link Communications Overview

There are many components in a vehicle that rely on information from other sources, transmit information to other sources, or both. Serial data communication networks provide a reliable, cost effective, way for various components of the vehicle to “talk” to one another and share information.

GM uses a number of different communication buses to insure the timely and efficient exchange of information between devices. When compared to each other, some of these buses are different in nature as far as speed, signal characteristics, and behavior. An example of this is the High Speed GMLAN and Low Speed GMLAN Buses.

On the other hand, when other buses are compared to each other they have similar characteristics and simply operate in parallel. In this case they are used to group together components which have high interaction. Examples are the High Speed GMLAN, Powertrain Expansion, and Chassis Expansion Buses. This allows them to communicate with each other on a bus with reduced message congestion insuring faster and the more timely exchange of information than if all vehicle devices were on a single bus.

The majority of information that exists within a given network generally stays local; however some information will have to be shared on other networks. Control modules designated as Gateway’s perform the function of transferring information between the various buses. A Gateway module is connected to at least 2 buses and will interact with each network according to its message strategy and transmission models.

GMLAN provides the capability for a receiving device to monitor message transmissions from other devices in order to determine if messages of interest are not being received. The primary purpose is to allow reasonable default values to be substituted for the information no longer being received. Additionally, a device may set a Diagnostic Trouble Code (DTC) to indicate that the device it is expecting information from is no longer communicating. A lost communication DTC typically is set in devices other than the device with a communication failure.

K9 Body Control Module (BCM)

The K9 Body Control Module has discrete input and output terminals to control the vehicle's body functions. The K9 Body Control Module is wired to the High Speed GMLAN Bus, Low Speed GMLAN Bus and multiple Local Interconnect Network (LIN) Buses and acts as a gateway between them. The various K9 Body Control Module input and output circuits are illustrated in the corresponding functional areas on the K9 Body Control Module electrical schematics. Refer to the *Body Control System Schematics on page 6-20* for more detailed information.

Power Mode Master

The K9 Body Control Module functions as the power mode master. The ignition switch is a low current switch with multiple discrete ignition switch signals to the power mode master for determining the power mode that will be sent over the serial data circuits to the other devices that need this information; the power mode master will activate relays and other direct outputs of the power mode master as needed. Refer to *Power Mode Description and Operation on page 6-610* for a complete description of power mode functions.

Gateway

The K9 Body Control Module functions as a gateway or translator. The purpose of the gateway is to translate serial data messages between the High Speed GMLAN Bus and the Low Speed GMLAN Bus for communication between the various devices. The gateway will interact with each network according to that network's transmission protocol. All communication between the K9 Body Control Module and a scan tool is done through the primary High Speed GMLAN Bus.

K56 Serial Data Gateway Module (Gen 3)

Note: The Data Bus Diagnostic Tool will not work with vehicles equipped with K56 Serial Data Gateway Module gen 3.

This vehicle is equipped with a K56 Serial Data Gateway Module gen 3. The K56 Serial Data Gateway Module is used to handle communications between multiple GMLAN buses and functions as a gateway to isolate the secure networks from the unsecured networks. It was created to mitigate bus loading to support cyber security and new active/advanced safety features (if equipped). The K56 Serial Data Gateway Module is used as a frame-to-frame gateway for all functional messages. Communication between the K56 Serial Data Gateway Module and a scan tool is done through the primary High Speed GMLAN bus. When the K56 Serial Data Gateway Module is not communicating, the scan tool can not communicate with the vehicle.

The K56 Serial Data Gateway Module has two microprocessors within the electronic control unit. Each microprocessor is diagnosed/programmed independently via the scan tool because the two microprocessors do not talk internally. Each of these processors are responsible for managing the traffic for specific communication buses on the vehicle. The two particular buses that they will manage are high speed and low speed. If communication does not exist or the particular micros have not been programmed, control modules won’t be able to communicate with or through the K56 Serial Data Gateway Module.

Low speed Microprocessor

- The low speed microprocessor is programmable via the X84 Data Link Connector (DLC) terminal 1. This low speed bus between the X84 Data Link Connector and the K56 Serial Data Gateway Module is called the Low Speed DLC Bus.
- The low speed microprocessor is capable of gating signals between the Low Speed DLC, the primary Low Speed GMLAN, and the Gateway Isolated Low Speed GMLAN Buses.
- The low speed microprocessor is also capable of gating signals between the Object High Speed DLC Bus (DLC terminals 3 & 11) and the Object High Speed GMLAN Bus.

High speed Microprocessor

- The high speed micro is programmable via the X84 Data Link Connector (DLC) terminals 6 & 14. This high speed bus between the X84 Data Link Connector and the K56 Serial Data Gateway Module is called High Speed DLC Bus.
- The high speed micro is capable of gating signals between the High Speed DLC, the primary High Speed GMLAN, the Gateway Expansion High Speed GMLAN, and the Gateway Isolated High Speed GMLAN Buses.
- The high speed micro is also capable of gating signals between the Chassis High Speed DLC Bus (DLC terminals 12 & 13) and the Chassis High Speed GMLAN Bus.

High Speed GMLAN Bus (Circuits 2500 & 2501)

Note: Continuity check cannot be performed between the X84 Data Link Connector and control modules on the primary High Speed GMLAN Bus.

A primary High Speed GMLAN Bus is used where data needs to be exchanged at a high enough rate to minimize the delay between the occurrence of a change in sensor value and the reception of this information by a control device using the information to adjust vehicle system performance.

The primary High Speed GMLAN serial data network consists of two twisted wires. One signal circuit is identified as GMLAN-High and the other signal circuit is identified as GMLAN-Low. At each end of the data bus there is a 120 Ω termination resistor between the GMLAN-High and GMLAN-Low circuits.

Data symbols (1's and 0's) are transmitted sequentially at a rate of 500 Kbit/s. The data to be transmitted over the bus is represented by the voltage difference between the GMLAN-High signal voltage and the GMLAN-Low signal voltage.

When the two wire bus is at rest the GMLAN-High and GMLAN-Low signal circuits are not being driven and this represents a logic "1". In this state both signal circuits are at the same voltage of 2.5 V. The differential voltage is approximately 0 V.

When a logic "0" is to be transmitted, the GMLAN-High signal circuit is driven higher to about 3.5 V and the GMLAN-Low circuit is driven lower to about 1.5 V. The differential voltage becomes approximately 2.0 (+/- 0.5) V.

High Speed DLC Bus (Circuits 1978 & 1979)

Between the X84 Data Link Connector (DLC) terminals 6 & 14 and the K56 Serial Data Gateway Module terminals 15 X1 & 16 X1, there is a high speed bus called the High Speed DLC Bus. The High Speed DLC Bus is similar to the primary High Speed GMLAN Bus. Between the GMLAN-High and GMLAN-Low circuits, there is a 120 Ω termination resistor internal to the K56 Serial Data Gateway Module. There is no terminating resistor at the DLC.

The K56 Serial Data Gateway Module uses its high speed microprocessor to gate signals between the High Speed DLC, the primary High Speed GMLAN, the Gateway Expansion High Speed GMLAN, and the Gateway Isolated High Speed GMLAN Buses.

Chassis High Speed GMLAN Bus (Circuits 6105 & 6106) (if equipped)

Note: Continuity check cannot be performed between the X84 Data Link Connector and control modules on the Chassis High Speed GMLAN Bus.

The Chassis High Speed GMLAN Bus (or Chassis Expansion Bus) is basically a copy of the High Speed GMLAN Bus except that its use is reserved for chassis components. This implementation splits message congestion between two parallel buses helping to insure timely message transmission and reception. Sometimes communication is required between the Chassis High Speed GMLAN Bus and the primary High Speed GMLAN Bus. This is accomplished by using the K17 Electronic Brake Control Module as the Gateway module. Since the Chassis High Speed GMLAN Bus and primary High Speed GMLAN Bus operate in the same manner, the diagnostics for each are similar.

Chassis High Speed DLC Bus (Circuits 1980 & 1981)

Between the X84 Data Link Connector (DLC) terminals 12 & 13 and the K56 Serial Data Gateway Module terminals 17 X1 & 18 X1, there is a high speed bus called the Chassis High Speed DLC Bus. The Chassis High Speed DLC Bus is similar to the Chassis High Speed GMLAN Bus. Between the GMLAN-High and GMLAN-Low circuits, there is a 120 Ω termination resistor internal to the K56 Serial Data Gateway Module. There is no terminating resistor at the DLC.

The K56 Serial Data Gateway Module uses its high speed microprocessor to gate signals between the Chassis High Speed DLC Bus and the Chassis High Speed GMLAN Bus.

Powertrain High Speed GMLAN Bus (Circuits 7493 & 7494) (if equipped)

Note: Continuity check cannot be performed between the X84 Data Link Connector and control modules on the Powertrain High Speed GMLAN Bus.

The Powertrain High Speed GMLAN Bus (or Powertrain Expansion Bus) is basically a copy of the High Speed GMLAN Bus except that its use is reserved for Powertrain components. The bus is optional based upon feature content. Sometimes communication is required between the Powertrain High Speed GMLAN

Bus and the primary High Speed GMLAN Bus. This is accomplished by using the K20 Engine Control Module as the Gateway module. Since the Powertrain High Speed GMLAN Bus and the primary High Speed GMLAN Bus operate in the same manner, the diagnostics for each are similar.

Powertrain Sensor High Speed GMLAN Bus (Circuits 4498 & 4499) (if equipped)

Note: Continuity check cannot be performed between the X84 Data Link Connector and control modules on the Powertrain Sensor High Speed GMLAN Bus.

The Powertrain Sensor High Speed GMLAN Bus is basically a copy of the primary High Speed GMLAN Bus except that its use is reserved for Powertrain components. The bus is optional based upon feature content. Sometimes communication is required between the Powertrain Sensor High Speed GMLAN Bus and the primary High Speed GMLAN Bus. This is accomplished by using the K20 Engine Control Module as the Gateway module. Since the Powertrain Sensor High Speed GMLAN Bus and the primary High Speed GMLAN Bus operate in the same manner, the diagnostics for each are similar.

Object High Speed GMLAN Bus (Circuits 3811 & 3813) (if equipped)

Note: Continuity check cannot be performed between the X84 Data Link Connector and control modules on the Object High Speed GMLAN Bus.

The Object High Speed GMLAN Bus is basically a copy of the High Speed GMLAN Bus except that its use is reserved for the enhanced safety system. This implementation is used to isolate the heavy communication among the enhanced safety system devices from the other vehicle buses, reducing congestion. The K124 Active Safety Control Module is connected to the Object High Speed GMLAN Bus as well as the primary High Speed GMLAN Bus, the Chassis High Speed GMLAN Bus, and the Low Speed GMLAN Bus. The K124 Active Safety Control Module acts as a Gateway module for all required communication between the Object High Speed GMLAN Bus devices and devices on these other vehicle buses. The Object High Speed GMLAN Bus operates in the same manner as the Chassis High Speed GMLAN and primary High Speed GMLAN buses and so the diagnostics are similar. The Object High Speed GMLAN Bus is physically partitioned into a Front Object Bus and a Rear Object Bus with each partition having its own communication enable circuit to activate the partition, but functional operation of both is identical. The Front Object Bus standard devices are the K124 Active Safety Control Module, the K109 Frontview Camera Module (or B174W Frontview Camera – Windshield), and the B233B Radar Sensor Module – Long Range. The Front Object Bus optional devices are the B233LF Radar Sensor Module – Short Range Left Front and the B233RF Radar Sensor Module – Short Range Right Front. The Rear Object Bus is optional and when present will have the K124 Active Safety Control Module, B233LR Radar Sensor Module – Short Range Left Rear, and B233RR Radar Sensor Module – Short Range Right Rear on the bus. All Object High Speed GMLAN Bus components are powered by the K124 Active Safety Control Module via the communication enable circuits, except the K109 Frontview Camera Module (or B174W Frontview Camera – Windshield) which is powered directly by battery.

Object High Speed DLC Bus (Circuits 2089 & 2090)

Between the X84 Data Link Connector (DLC) terminals 3 & 11 and the K56 Serial Data Gateway Module terminals 13 X1 & 14 X1, there is a high speed bus called the Object High Speed DLC Bus. The Object High Speed DLC Bus is similar to the Object High Speed GMLAN Bus. Between the GMLAN-High and GMLAN-Low circuits, there is a 120 Ω termination resistor internal to the K56 Serial Data Gateway Module. There is no terminating resistor at the DLC.

The K56 Serial Data Gateway Module uses its low speed microprocessor to gate signals between the Object High Speed DLC Bus and the Object High Speed GMLAN Bus.

Gateway Isolated High Speed GMLAN Bus (Circuits 1304 & 1305)

Note: Continuity check cannot be performed between the X84 Data Link Connector (or control modules on the primary High Speed GMLAN Bus) and control modules on the Gateway Isolated High Speed GMLAN Bus.

The Gateway Isolated High Speed GMLAN Bus is an extension of the primary High Speed GMLAN Bus except it is separated from the primary High Speed GMLAN Bus by the K56 Serial Data Gateway Module for cybersecurity protection. The K56 Serial Data Gateway Module verifies data messages being transmitted from the control modules on the Gateway Isolated High Speed GMLAN Bus back to the primary High Speed GMLAN Bus are good with valid transmitter messages. This bus does not terminate to the X84 Data Link Connector.

The Gateway Isolated High Speed GMLAN Bus consists of two twisted wires. One signal circuit is identified as GMLAN-High and the other signal circuit is identified as GMLAN-Low. At each end of the data bus there is a 120 Ω termination resistor between the GMLAN-High and GMLAN-Low circuits.

Gateway Expansion High Speed GMLAN Bus (Circuits 3935 & 3936)

Note: Continuity check cannot be performed between the X84 Data Link Connector (or control modules on the primary High Speed GMLAN Bus) and control modules on the Gateway Expansion High Speed GMLAN Bus.

The Gateway Expansion High Speed GMLAN Bus is not cybersecurity protected and does not terminate at the X84 Data Link Connector. This expansion bus is created to alleviate the throughput on the primary High Speed GMLAN Bus.

The Gateway Expansion High Speed GMLAN Bus consists of two twisted wires. One signal circuit is identified as GMLAN-High and the other signal circuit is identified as GMLAN-Low. At each end of the data bus there is a 120 Ω termination resistor between the GMLAN-High and GMLAN-Low circuits.

Ethernet Bus (if equipped)

At the core of the infotainment system is the Radio Ethernet Audio Video Bridging switch which communicates directly to each contributing Infotainment module terminator. The Ethernet harness consists of twisted pair wires from point to point. Each device on the Ethernet infotainment system sends/receives data at 100 Mbit/s to/from a specified port at the A11 Radio. The Radio/Ethernet will also be used to program USB software update files to the devices connected to the Ethernet ports.

The A11 Radio is the Ethernet master. The Radio communicates with other devices and systems in the vehicle via GMLAN and LIN buses. Diagnostic Trouble Codes will be read on GMLAN to diagnose Ethernet, LIN and system faults. GMLAN will also be used for programming calibrations.

Media Oriented Systems Transport (MOST) Bus (Circuits 3997 & 3998) (if equipped)

The MOST Infotainment network is a dedicated high speed multimedia streaming data bus independent from GMLAN. The MOST Bus will be configured in a physical hardwired loop with each device within the bus sends and receives data on an assigned MOST addresses in a set order. Each device on the MOST Bus will be required to have twisted pair copper wires (2 transmit TX, 2 receive RX, and 1 electronic control line which is a 12 V wakeup signal line). The A11 Radio is the MOST Master and will monitor the bus for vehicle configuration, Infotainment data messages and errors on the bus. The MOST initialization consists of a short 100 ms low voltage pulse on the electronic control line (or MOST control line) connected to all devices contained on the MOST ring. This wakeup message once received by each device, will first respond with a generic device response. Once these initial responses on the MOST Bus are reported successfully without error to the A11 Radio, the second data request will record the MOST device addresses, their functionality requirements and capabilities within. The A11 Radio will learn this information and also record the address node sequence on the MOST Bus at this point. This node address list will now be stored within the A11 Radio as the MOST Bus configuration (called “Last Working MOST ID of Node 1 – 9” on scan tool data display).

When MOST receive, transmit, or control line faults are detected, transmit/receive messages will not received as expected from the wakeup request. The A11 Radio and the K74 Human Machine Interface Control Module will then perform diagnostics to isolate these MOST faults. If the MOST control line is shorted low to 0 V for excess amount of time, the A11 Radio will set a U2098 DTC and K74 Human Machine Interface Control Module will set a U0029 02 DTC. At this point the MOST Bus will be unable to communicate until the shorted MOST control line is repaired.

Once the shorted MOST control line diagnostics pass, the A11 Radio will attempt to resend the initial short pulse attempts up to 3 times on the MOST control line. If the expected responses are not received, the A11 Radio continues into a failure mode setting a U0028 DTC and will continue on to send one 300 ms long pulse, which will enable the furthest upstream transmitting device to become the surrogate MOST Master in this MOST fault/diagnostic mode. When the A11 Radio receives this new MOST Master identity, the surrogate MOST master device can be identified based on scan tool data parameter “Surrogate MOST Master Node Upstream Position”. The scan tool should be used to determine the MOST Bus configuration and direction by utilizing the “Last Working MOST ID of Node 1 – 9” parameters from the A11 Radio data display. When a fault is present, it will indicate the newly enabled “Surrogate MOST Master Node Upstream Position” from the A11 Radio. This will assist in determining where the MOST bus/control is at fault. The MOST device upstream from the surrogate MOST master device, transmit, receive, or control lines will be the suspect areas for diagnostics at this point. These faults can be associated with any of the MOST transmit, receive, or control line twisted copper wires or possibly an internal device fault.

The K74 Human Machine Interface Control Module will set a U0029 00 DTC when it diagnoses a MOST bus not communicating properly after one attempt. When the DTC U0029 00 is set by the K74 Human Machine Interface Control Module without the corresponding DTC U0028 from the A11 Radio, it will be an indication of an intermittent wiring/device condition.

FlexRay Bus (if equipped)

The FlexRay Bus is developed for safety related applications and higher data rate in real time application. The communication is time triggered. The FlexRay serial data network consists of two unshielded twisted wires to connect FlexRay nodes together. A FlexRay node is a device connected to a FlexRay Bus.

The FlexRay serial data network features 2 communication channels: channel A and channel B. Each channel may be operated at a data rate of up to 10 Mbit/s. FlexRay nodes can be connected to either both channels or a single channel. Each FlexRay channel consists of multiple branches. Each branch is a private bus. At each end of a branch, there is a 100 Ω terminating resistor connected between the pair of FlexRay serial data circuits. The terminating resistors can be external or internal to a FlexRay device.

The second FlexRay channel can be used as a redundant channel for fault toleration or to increase data rate of up to 20 Mbit/s. The dual channel configuration consists of two independent data channels for fault-tolerance. When one channel fails, the communication can still continue with reduced bandwidth.

Low Speed GMLAN Bus (Circuit 5060)

Note: Continuity check cannot be performed between the X84 Data Link Connector and control modules on the Low Speed GMLAN Bus.

Low Speed GMLAN Bus is used in applications where a high data rate is not required which allows for the use of less complex components. It is typically used for operator controlled functions where the response time requirements are slower than those required for dynamic vehicle control.

The Low Speed GMLAN Serial Data Network consists of a single wire, ground referenced bus with high side voltage drive. During on road vehicle operation data symbols (1's and 0's) are transmitted sequentially at the normal rate of 33.3 Kbit/s. For component programming only, a special high speed data mode of 83.3 Kbit/s may be used.

Unlike the high speed dual wire networks, the single wire low speed network does not use terminating resistors at either end of the network.

The data symbols to be transmitted over the bus are represented by different voltage signals on the bus. When the Low Speed GMLAN Bus is at rest and is not being driven, there is a low signal voltage of approximately 0.2 V. This represents a logic "1". When a logic "0" is to be transmitted, the signal voltage is driven higher to around 4.0 V or higher.

Low Speed DLC Bus (Circuit 2100)

Between the X84 Data Link Connector (DLC) terminal 1 and the K56 Serial Data Gateway Module terminal 26 X1, there is a low speed bus called the Low Speed DLC Bus. The Low Speed DLC Bus is similar to the primary Low Speed GMLAN Bus.

The K56 Serial Data Gateway Module uses its low speed microprocessor to gate signals between the Low Speed DLC, the primary Low Speed GMLAN, and the Gateway Isolated Low Speed GMLAN Buses.

Gateway Isolated Low Speed GMLAN Bus (Circuit 1102)

Note: Continuity check cannot be performed between the X84 Data Link Connector (or control modules on the primary Low Speed GMLAN Bus) and control modules on the Gateway Isolated Low Speed GMLAN Bus.

The Gateway Isolated Low Speed GMLAN Bus is an extension of the primary Low Speed GMLAN Bus except it is separated from the primary Low Speed GMLAN Bus by the K56 Serial Data Gateway Module for cybersecurity protection. The K56 Serial Data Gateway Module verifies data messages being transmitted from the control modules on the Gateway Isolated Low Speed GMLAN Bus back to the primary Low Speed GMLAN Bus are good with valid transmitter messages. This bus does not terminate to the X84 Data Link Connector.

Local Interconnect Network (LIN) Bus

The Local Interconnect Network (LIN) Bus consists of a single wire with a transmission rate of 10.417 Kbit/s. This bus is used to exchange information between a master control module and other smart devices which provide supporting functionality. This type of configuration does not require the capacity or speed of either a High Speed GMLAN Bus or Low Speed GMLAN Bus and is thus relatively simpler.

The data symbols (1's and 0's) to be transmitted are represented by different voltage levels on the communication bus. When the LIN Bus is at rest and is not being driven, the signal is in a high voltage state of approximately Vbatt. This represents a logic "1". When a logic "0" is to be transmitted, the signal voltage is driven low to about ground (0.0 V).

Communication Enable Circuit Description

Devices on High Speed GMLAN Bus enable or disable communication based on the voltage level of the Serial Data Communication Enable circuit or Accessory Wakeup Serial Data circuit. When the circuit voltage is high (around 12 V), communications are enabled. When the circuit is low, communications are disabled.

X84 Data Link Connector (DLC)

The X84 Data Link Connector is a standardized 16-cavity connector. Connector design and location is dictated by an industry wide standard, and is required to provide the following:

- Terminal 1: Low Speed GMLAN Serial Data #3 terminal (Low Speed DLC Bus)
- Terminal 3: High Speed GMLAN Serial Data (+)(13) terminal (Object High Speed DLC Bus)
- Terminal 4: Scan tool power ground terminal
- Terminal 5: Common signal ground terminal
- Terminal 6: High Speed GMLAN Serial Data (+)(11) terminal (High Speed DLC Bus)
- Terminal 11: High Speed GMLAN Serial Data (-)(13) terminal (Object High Speed DLC Bus)
- Terminal 12: High Speed GMLAN Serial Data (+)(12) terminal (Chassis High Speed DLC Bus)
- Terminal 13: High Speed GMLAN Serial Data (-)(12) terminal (Chassis High Speed DLC Bus)
- Terminal 14: High Speed GMLAN Serial Data (-)(11) terminal (High Speed DLC Bus)
- Terminal 16: Scan tool power, battery positive voltage terminal

Serial Data Reference

The scan tool communicates over the various buses on the vehicle. When a scan tool is installed on a vehicle, the scan tool will try to communicate with every device that could be optioned into the vehicle. If an option is not installed on the vehicle, the scan tool will display No Comm (or Not Connected) for that optional device. In order to avert misdiagnoses of No Communication with a specific device, refer to Data Link References for a list of devices and the buses they communicate with. Use schematics and specific vehicle build RPO codes to determine optional devices.

OEM Connector: 1718446-1
Service Connector: Service by Harness - See Part Catalog
Description: 1-Way F 8.0 Timer(BK)

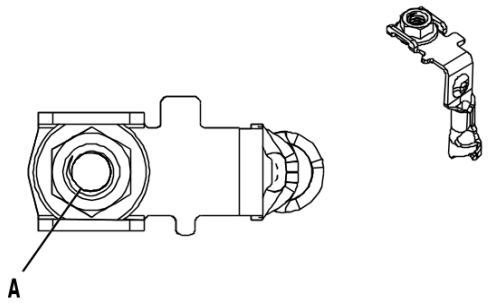
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-22 (RD)	No Tool Required

X50D Fuse Block - Battery X2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	8	RD / GN	40	Battery Positive Voltage	I	—

X50D Fuse Block - Battery X3



2759564

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 13869290
Service Connector: Service by Cable Assembly — See Part Catalog
Description: 1-Way Ring Terminal

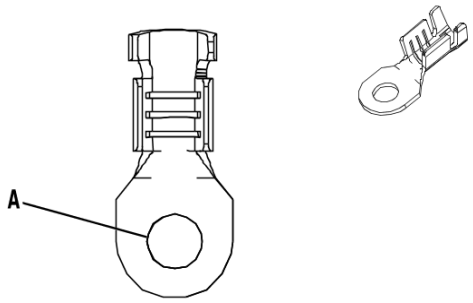
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

X50D Fuse Block - Battery X3

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	8	RD / BU	42	Battery Positive Voltage	I	—

X50D Fuse Block - Battery X4



4539335

Connector Part Information

Harness Type: Battery Cable Positive Wiring Harness
OEM Connector: CBR742-012
Service Connector: Service by Cable Assembly — See Part Catalog
Description: 1-Way Ring Terminal

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

X50D Fuse Block - Battery X4

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option

4622549

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Driver
OEM Connector: 7289-5068-60
Service Connector: Service by Harness - See Part Catalog
Description: 10-Way F 0.64 YESC Kaizen Series(GN)

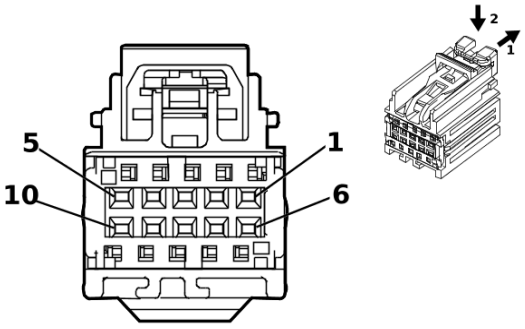
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

A23D Door Latch Assembly - Driver

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	GY	745	Left Front Door Ajar Switch Signal	I	—
2	0.5	WH / YE	3574	Driver Door Open Switch Signal	I	—
3	0.5	BK	550	Ground	I	—
4	0.35	WH / VT	3270	Driver Door Lock Motor Status Signal	I	—
5	0.35	BU / VT	1124	Door Lock Key Switch Unlock Signal	I	—
6	—	—	—	Not Occupied	—	—
7	0.75	GY	5911	Door Lock Actuator Lock Control 2	I	—
8	0.75	BN / YE	294	Door Lock Actuator Unlock Control	I	—
9 - 10	—	—	—	Not Occupied	—	—

A23LR Door Latch Assembly - Left Rear



4622549

Connector Part Information

Harness Type: Rear Door Door Wiring Harness - Left Rear
OEM Connector: 7289-5068-60
Service Connector: Service by Harness - See Part Catalog
Description: 10-Way F 0.64 YESC Kaizen Series(GN)

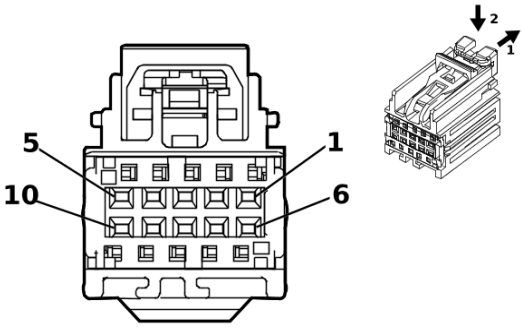
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

A23LR Door Latch Assembly - Left Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	GY	747	Left Rear Door Ajar Switch Signal	I	—
2	—	—	—	Not Occupied	—	—
3	0.5	BK	550	Ground	I	—
4 - 6	—	—	—	Not Occupied	—	—
7	0.75	GY	295	Door Lock Actuator Lock Control	I	—
8	0.75	BN / YE	294	Door Lock Actuator Unlock Control	I	—
9 - 10	—	—	—	Not Occupied	—	—

A23P Door Latch Assembly - Passenger



4622549

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Passenger
OEM Connector: 7289-5068-60
Service Connector: Service by Harness - See Part Catalog
Description: 10-Way F 0.64 YESC Kaizen Series(GN)

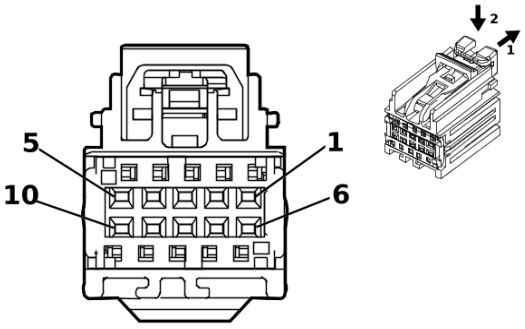
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

A23P Door Latch Assembly - Passenger

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1 - 2	—	—	—	Not Occupied	—	—
3	0.5	BK	750	Ground	I	—
4	—	—	—	Not Occupied	—	—
5	0.35	GY	746	Right Front Door Ajar Switch Signal	I	—
6 - 7	—	—	—	Not Occupied	—	—
8	0.75	BN / YE	294	Door Lock Actuator Unlock Control	I	—
9	0.75	GY	295	Door Lock Actuator Lock Control	I	—
10	—	—	—	Not Occupied	—	—

A23RR Door Latch Assembly - Right Rear



4622549

Connector Part Information

Harness Type: Rear Door Door Wiring Harness - Right Rear
OEM Connector: 7289-5068-60
Service Connector: Service by Harness - See Part Catalog
Description: 10-Way F 0.64 YESC Kaizen Series(GN)

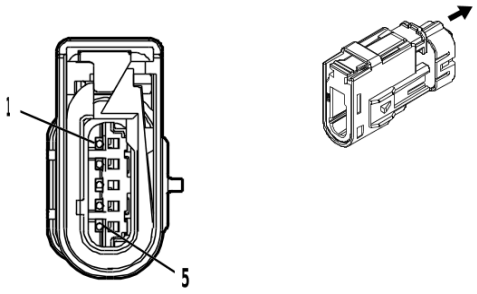
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

A23RR Door Latch Assembly - Right Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1 - 2	—	—	—	Not Occupied	—	—
3	0.5	BK	750	Ground	I	—
4	—	—	—	Not Occupied	—	—
5	0.35	GY	748	Right Rear Door Ajar Switch Signal	I	—
6 - 7	—	—	—	Not Occupied	—	—
8	0.75	BN / YE	294	Door Lock Actuator Unlock Control	I	—
9	0.75	GY	295	Door Lock Actuator Lock Control	I	—
10	—	—	—	Not Occupied	—	—

A24D Door Handle Assembly - Driver Exterior



4808321

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Driver
OEM Connector: SRVWSB-04A-BS
Service Connector: Service by Harness - See Part Catalog
Description: 5-Way M 1.2 Series, Sealed(NA)

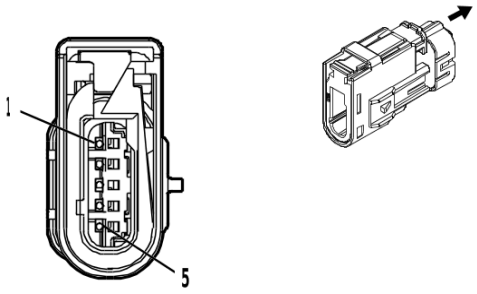
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-13 (BU)	No Tool Required

A24D Door Handle Assembly - Driver Exterior

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GN / WH	3570	Driver Door Handle Switch Signal	I	—
2	0.5	VT	3560	Driver Door Passive Entry Antenna High Signal	I	—
3	—	—	—	Not Occupied	—	—
4	0.5	VT / GY	3561	Driver Door Passive Entry Antenna Low Signal	I	—
5	0.5	BK	550	Ground	I	—

A24P Door Handle Assembly - Passenger Exterior



4808321

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Passenger
OEM Connector: SRVWSB-04A-BS
Service Connector: Service by Harness - See Part Catalog
Description: 5-Way M 1.2 Series, Sealed(NA)

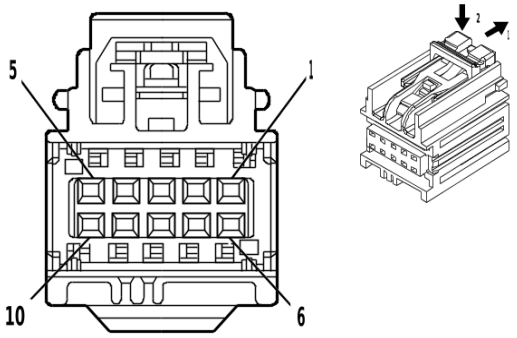
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-13 (BU)	No Tool Required

A24P Door Handle Assembly - Passenger Exterior

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	VT / WH	3571	Passenger Door Handle Switch Signal	I	—
2	0.5	GN / YE	3562	Passenger Door Passive Entry Antenna High Signal	I	—
3	—	—	—	Not Occupied	—	—
4	0.5	GN / BK	3563	Passenger Door Passive Entry Antenna Low Signal	I	—
5	0.5	BK	750	Ground	I	—

A26 HVAC Controls



4891168

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: 7289-4885
Service Connector: 13509649
Description: 10-Way F 0.64 YESC Kaizen Series(NA)

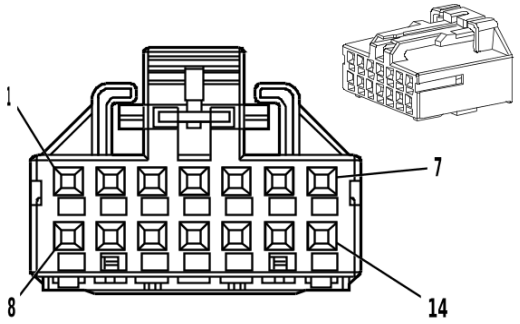
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	19300629	J-35616-64B (L-BU)	J-38125-215A

A26 HVAC Controls

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	RD / YE	6540	Battery Positive Voltage	I	—
2	—	—	—	Not Occupied	—	—
3	0.35	GN	5060	Low Speed GMLAN Serial Data	I	—
4	—	—	—	Not Occupied	—	—
5	0.5	YE / GY	5883	Steering Wheel Heating Switch Signal	I	KI3
6	0.5	BN / WH	5884	Steering Wheel Heating Switch LED Control	I	KI3
7 - 8	—	—	—	Not Occupied	—	—
9	0.35	GN / YE	7531	HVAC Control Module LIN Bus 1	I	—
10	0.35	BK	1250	Ground	I	—

A28 Hybrid/EV Battery Contactor Assembly



1897000

Connector Part Information

Harness Type: Hybrid_EV Battery
OEM Connector: 936124-2
Service Connector: Service by Harness - See Part Catalog
Description: 14-Way F Micro-Quadlock Series(YE)

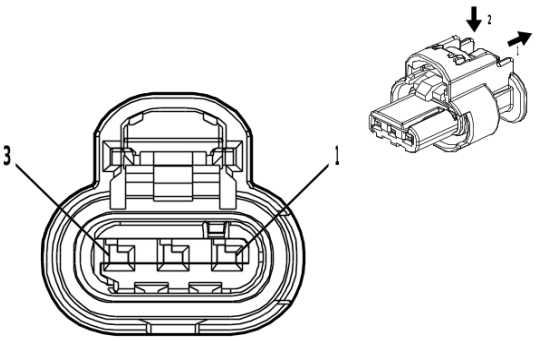
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

A28 Hybrid/EV Battery Contactor Assembly

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1 - 2	—	—	—	Not Occupied	—	—
3	—	BN / GN	3959	Hybrid/EV Battery 1 [+] Relay Control	I	—
4	—	VT / GY	3961	Hybrid/EV Battery [-] Relay Control	I	—
5	—	YE / VT	3962	Hybrid/EV Battery 3 [+] Relay Control	I	—
6	—	—	—	Not Occupied	—	—
7	—	GY	5138	Precharge Relay	I	—
8 - 9	—	—	—	Not Occupied	—	—
10	—	BK	850	Ground	I	—
11	—	BK / YE	2962	Hybrid/EV Battery Current Sensor Coarse Signal	I	—
12	—	VT / RD	2965	Hybrid/EV Battery Current Sensor Voltage Reference	I	—
13	—	BK / GY	2963	Hybrid/EV Battery Current Sensor Low Reference	I	—
14	—	GN / BN	2961	Hybrid/EV Battery Current Sensor Fine Signal	I	—

B1 A/C Refrigerant Pressure Sensor



4581126

Connector Part Information

Harness Type: Engine Wiring Harness
OEM Connector: 1-2296695-1
Service Connector: 86792094
Description: 3-Way F 1.2 MCON-CB Series, Sealed(BK)

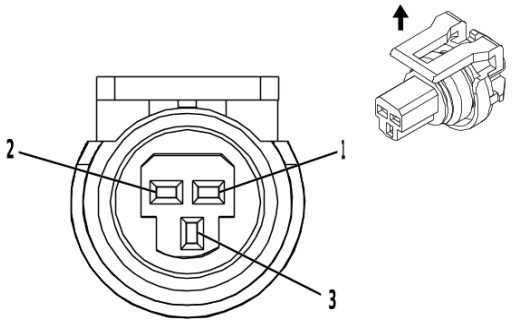
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B1 A/C Refrigerant Pressure Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	BN / RD	2700	A/C Pressure Sensor 5V Reference	I	—
2	0.5	GN	380	A/C Refrigerant Pressure Sensor Signal	I	—
3	0.5	BK / BN	5514	A/C Refrigerant Pressure Sensor Low Reference	I	—

B1C A/C Low Side Pressure Sensor



2909191

Connector Part Information

Harness Type: Engine Wiring Harness
OEM Connector: 13846842
Service Connector: 19368669
Description: 3-Way F 150 GT Series, Sealed(BK)

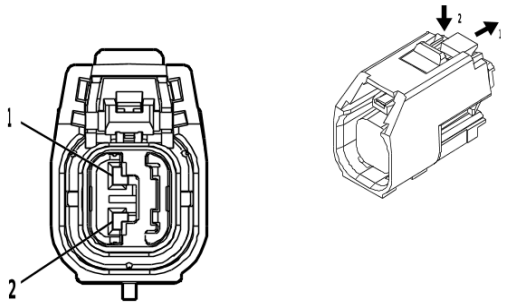
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required

B1C A/C Low Side Pressure Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	BK / GN	3800	A/C Refrigerant Sensor Low Reference	I	—
2	0.5	BU / RD	474	5V Reference	I	—
3	0.5	BU	204	A/C Low Side Pressure Sensor Signal	I	—

B5LF Wheel Speed Sensor - Left Front



4822769

Connector Part Information

Harness Type: Forward Lamp Wiring Harness
OEM Connector: 33189088
Service Connector: 19368562
Description: 2-Way F 1.5 YESC Series, Sealed(BK)

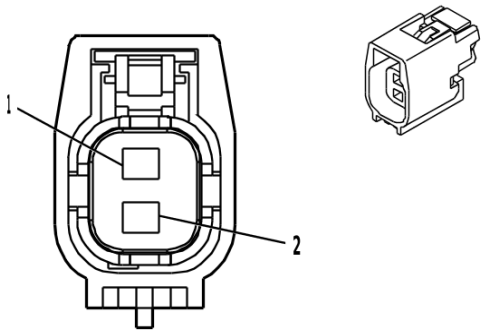
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

B5LF Wheel Speed Sensor - Left Front

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / WH	7064	Left Front Wheel Speed Sensor Control	I	—
2	0.5	GY	830	Left Front Wheel Speed Sensor Signal	I	—

B5LR Wheel Speed Sensor - Left Rear



2152684

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 7289-4204-30
Service Connector: 19371210
Description: 2-Way F 1.5 GT Series, Sealed(BK)

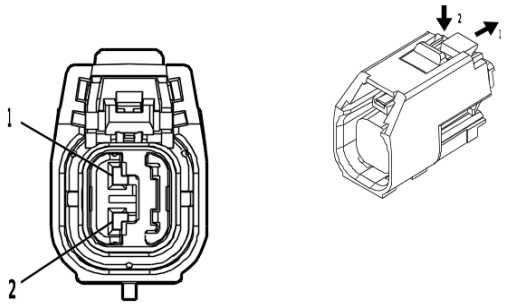
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

B5LR Wheel Speed Sensor - Left Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / BK	7127	Left Rear Wheel Speed Sensor Control	I	—
2	0.5	BU	884	Left Rear Wheel Speed Sensor Signal	I	—

B5RF Wheel Speed Sensor - Right Front



4822769

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 33189088
Service Connector: 19368562
Description: 2-Way F 1.5 YESC Series, Sealed(BK)

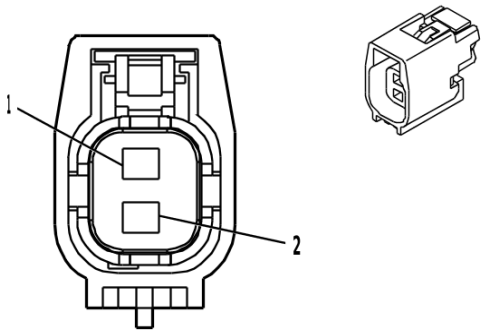
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

B5RF Wheel Speed Sensor - Right Front

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / BN	7065	Right Front Wheel Speed Sensor Control	I	—
2	0.5	YE	872	Right Front Wheel Speed Sensor Signal	I	—

B5RR Wheel Speed Sensor - Right Rear



2152684

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 7289-4204-30
Service Connector: 19371210
Description: 2-Way F 1.5 GT Series, Sealed(BK)

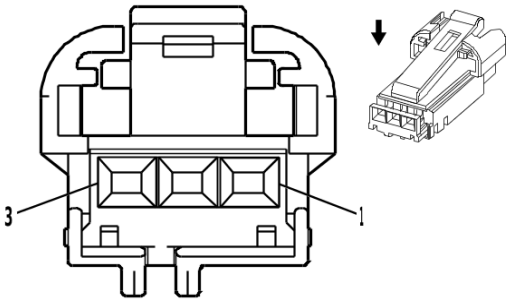
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

B5RR Wheel Speed Sensor - Right Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / YE	7128	Right Rear Wheel Speed Sensor Control	I	—
2	0.5	VT	882	Right Rear Wheel Speed Sensor Signal	I	—

B7B Air Temperature Sensor - Duct Lower



2523153

Connector Part Information

Harness Type: HVAC
OEM Connector: 31067-1010
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 0.64 GET Series(BK)

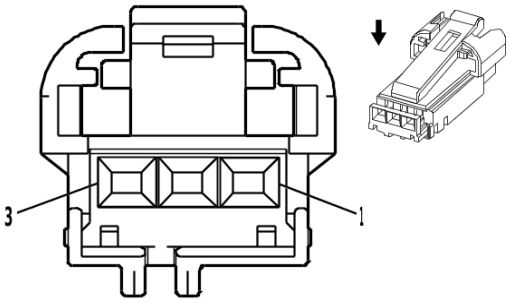
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

B7B Air Temperature Sensor - Duct Lower

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	BN	518	Lower Left Duct Air Temperature Sensor Signal	I	—
2	—	—	—	Not Occupied	—	—
3	—	BK / YE	407	Sensor Low Reference	I	—

B7F Air Temperature Sensor - Duct Upper



2523153

Connector Part Information

Harness Type: HVAC
OEM Connector: 31067-1010
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 0.64 GET Series(BK)

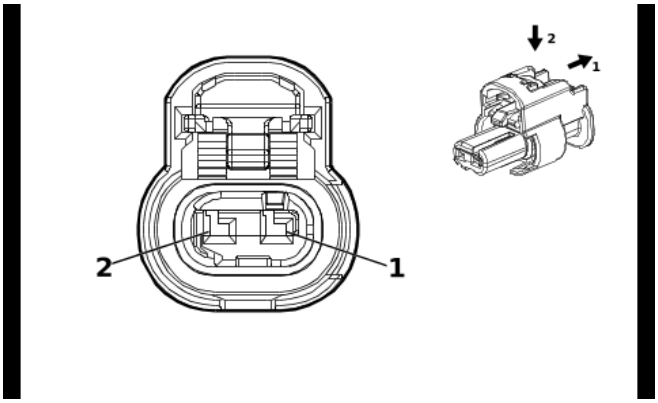
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

B7F Air Temperature Sensor - Duct Upper

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	BK / YE	407	Sensor Low Reference	I	—
2	—	—	—	Not Occupied	—	—
3	—	GY / GN	516	Left Upper Duct Air Temperature Sensor Signal	I	—

B9 Ambient Air Temperature Sensor



4649903

Connector Part Information

Harness Type: Front Bumper Fascia Wiring Harness
OEM Connector: 1-2296694-1
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.2 MCON Series, Sealed(BK)

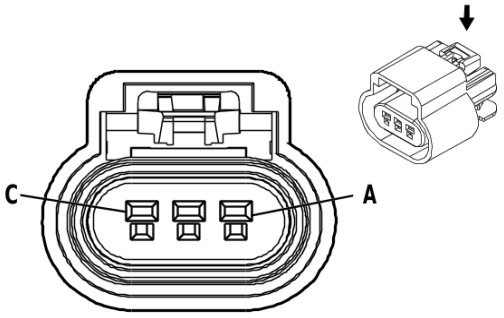
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B9 Ambient Air Temperature Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	BU / GY	636	Ambient Air Temperature Sensor Signal	I	—
2	0.5	BK / BU	61	Ambient Air Temperature Sensor Low Reference	I	—

B18 Battery Current Sensor



646415

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 13519047
Service Connector: 19368886
Description: 3-Way F 150 GT Series, Sealed(BK)

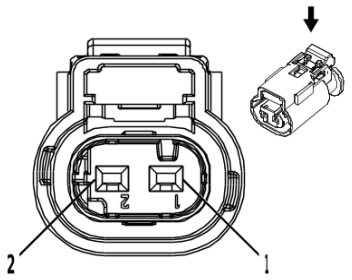
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required

B18 Battery Current Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	0.5	BU / VT	5076	Current Sensor Voltage Reference	I	—
B	0.5	BK / VT	5077	Current Sensor Low Reference	I	—
C	0.5	WH / YE	5075	Current Sensor Signal	I	—

B20 Brake Fluid Level Switch



2717066

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 10010337
Service Connector: 13587326
Description: 2-Way F 1.2 Multilock Series, Sealed(BK)

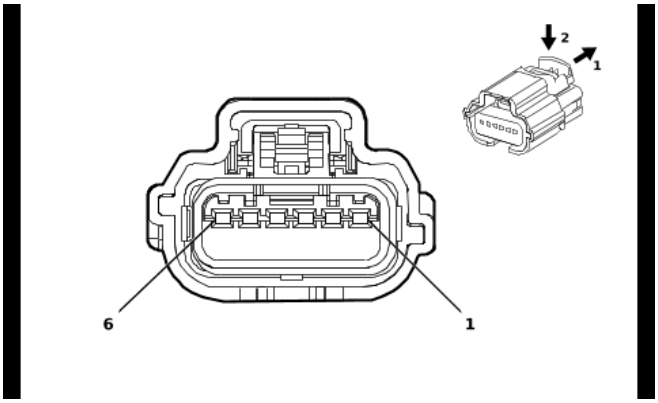
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-12 (BU)	No Tool Required

B20 Brake Fluid Level Switch

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GN / GY	333	Brake Fluid Level Signal	I	—
2	0.5	BK	550	Ground	I	—

B22 Brake Pedal Position Sensor



4773396

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 31404-7810
Service Connector: 84683650
Description: 6-Way F 64 Series, Sealed(NA)

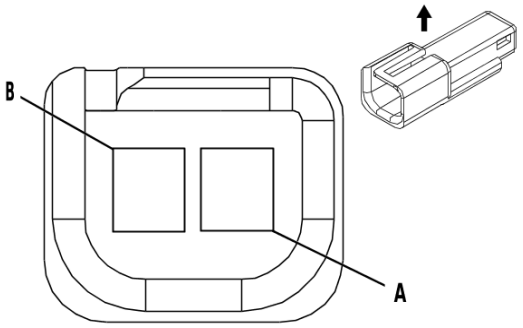
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

B22 Brake Pedal Position Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	WH	5359	Brake Apply Sensor Control	I	—
2	0.5	BK / BN	5360	Brake Apply Sensor Low Reference	I	—
3	0.5	BU / YE	5361	Brake Apply Sensor Signal	I	—
4	0.5	WH / GN	5380	Brake Position Sensor Signal	I	—
5	0.5	WH / RD	5381	Brake Position Sensor 5V Reference	I	—
6	0.5	BK / YE	5382	Brake Position Sensor Low Reference	I	—

B24LF Mobile Telephone Microphone - Left Front



35441

Connector Part Information

Harness Type: Roof Wiring Harness
OEM Connector: 12047663
Service Connector: 13584278
Description: 2-Way M 150 Metri-Pack Series(BK)

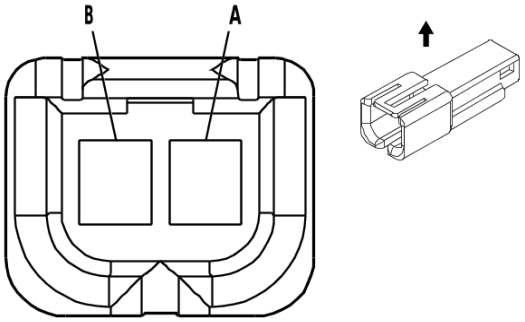
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-3 (GY)	No Tool Required

B24LF Mobile Telephone Microphone - Left Front

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	0.35	BK / BN	654	Cellular Telephone Microphone Low Reference	I	—
B	0.35	BU	655	Cellular Telephone Microphone Signal	I	—

B24RF Mobile Telephone Microphone - Right Front



258301

Connector Part Information

Harness Type: Roof Wiring Harness
OEM Connector: 12059254
Service Connector: 12126020
Description: 2-Way M 150 Metri-Pack Series(GN)

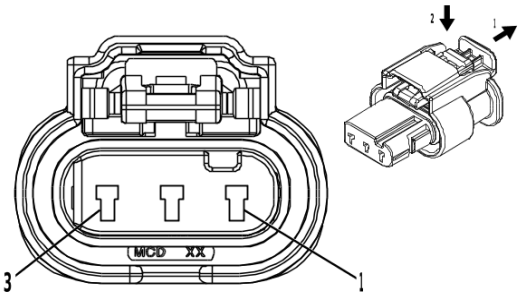
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-3 (GY)	No Tool Required

B24RF Mobile Telephone Microphone - Right Front

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	0.35	BU / BK	7044	Microphone [-] Signal	I	—
B	0.35	VT / YE	7043	Microphone [+] Signal	I	—

B55 Engine Hood Switch



4421568

Connector Part Information

Harness Type: Forward Lamp Wiring Harness
OEM Connector: 34900-3120
Service Connector: 19368220
Description: 3-Way F 1.2 MCON-LL Series, Sealed(BK)

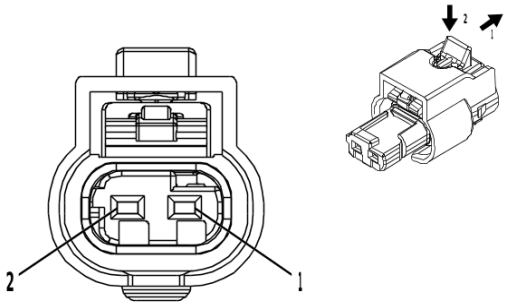
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B55 Engine Hood Switch

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	YE	4063	Hood Status A Signal	I	—
2	0.5	BN / GN	4064	Hood Status B Signal	I	—
3	0.5	BK	250	Ground	I	—

B59L Front Impact Sensor - Left



4539129

Connector Part Information

Harness Type: Forward Lamp Wiring Harness
OEM Connector: 4-2272003-4
Service Connector: 84869316
Description: 2-Way F 1.2 MCON-CB Series, Sealed(BK)

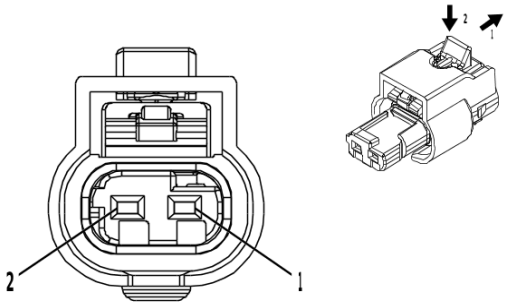
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B59L Front Impact Sensor - Left

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	OG / YE	354	Left Front Impact Discriminating Sensor Signal	I	(AYF/ AYG)
2	0.5	BK / OG	5045	Left Front Impact Discriminating Sensor Low Reference	I	(AYF/ AYG)

B59R Front Impact Sensor - Right



4539129

Connector Part Information

Harness Type: Forward Lamp Wiring Harness
OEM Connector: 4-2272003-4
Service Connector: 84869316
Description: 2-Way F 1.2 MCON-CB Series, Sealed(BK)

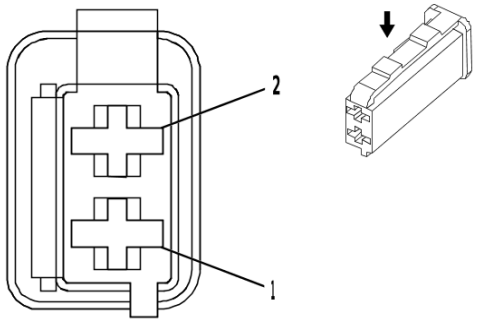
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B59R Front Impact Sensor - Right

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	OG / GN	1409	Right Front Impact Discriminating Sensor Signal	I	(AYF/ AYG)
2	0.5	BK / OG	5600	Right Front Impact Discriminating Sensor Low Reference	I	(AYF/ AYG)

B61P Seat Belt Tension Sensor - Passenger



2339593

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 1563189-1
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.6 Timer Series(BK)

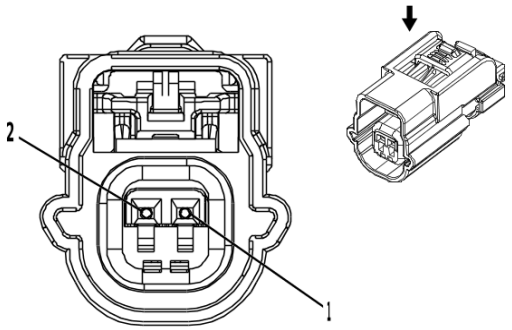
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required

B61P Seat Belt Tension Sensor - Passenger

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / OG	3946	Passenger Automatic Locking Retractor Switch Low Reference	I	—
2	0.5	OG / BN	3947	Passenger Automatic Locking Retractor Switch Signal	I	—

B63LF Side Impact Sensor - Left Front



3556418

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Driver
OEM Connector: 54390240
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 0.64 Series, Sealed(GY)

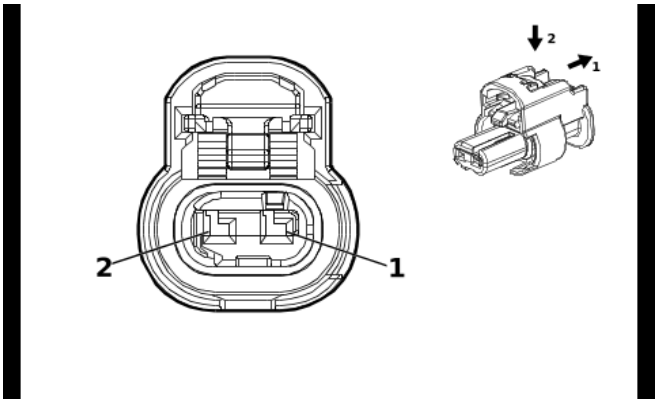
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

B63LF Side Impact Sensor - Left Front

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	OG / GN	2132	Left Front Side Impact Sensor Signal	I	(AYF/ AYG)
2	0.5	BK / OG	6628	Left Front Side Impact Sensor Low Reference	I	(AYF/ AYG)

B63LR Side Impact Sensor - Left Rear



4649903

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 1-2296694-1
Service Connector: 85519075
Description: 2-Way F 1.2 MCON Series, Sealed(BK)

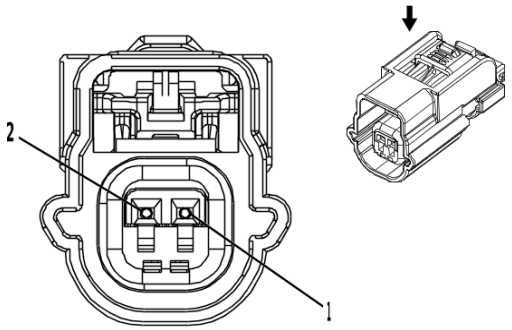
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B63LR Side Impact Sensor - Left Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	OG / BU	6620	Left Middle Side Impact Sensor Signal	I	(AYF/ AYG)
2	0.5	BK / OG	6621	Left Middle Side Impact Sensor Low Reference	I	(AYF/ AYG)

B63RF Side Impact Sensor - Right Front



3556418

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Passenger
OEM Connector: 54390240
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 0.64 Series, Sealed(GY)

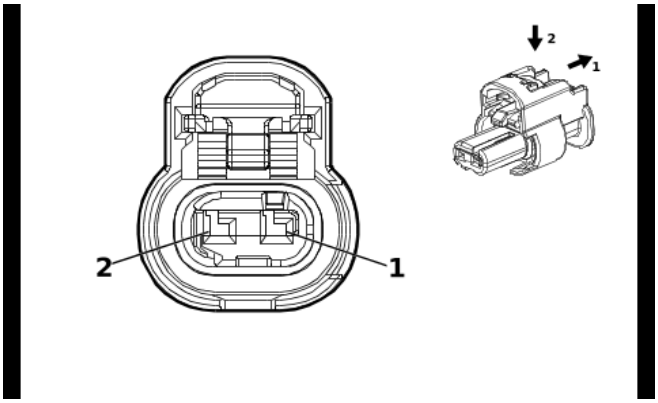
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

B63RF Side Impact Sensor - Right Front

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	BN / OG	2134	Right Front Side Impact Sensor Signal	I	(AYF/ AYG)
2	0.5	BK / OG	6629	Right Front Side Impact Sensor Low Reference	I	(AYF/ AYG)

B63RR Side Impact Sensor - Right Rear



4649903

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 1-2296694-1
Service Connector: 85519075
Description: 2-Way F 1.2 MCON Series, Sealed(BK)

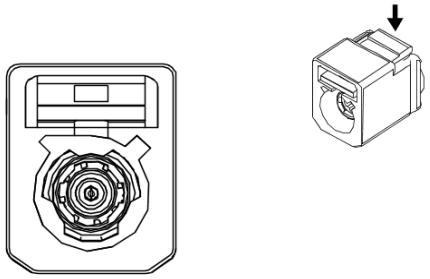
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B63RR Side Impact Sensor - Right Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	OG / VT	6624	Right Middle Side Impact Sensor Signal	I	(AYF/ AYG)
2	0.5	BK / OG	6625	Right Middle Side Impact Sensor Low Reference	I	(AYF/ AYG)

B87 Rearview Camera (UV2)



3293633

Connector Part Information

Harness Type: License Lamp Wiring Harness COAX
OEM Connector: 13519801
Service Connector: Service by Cable Assembly — See Part Catalog
Description: 1-Way F Coax Type(BK)

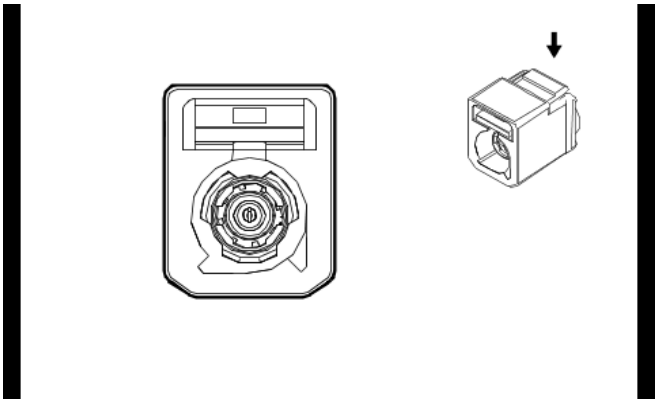
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

B87 Rearview Camera (UV2)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
—	—	Coax Cable	—	Rear Vision Camera Coaxial Video Signal	I	—

B87 Rearview Camera (UVB)



4895598

Connector Part Information

Harness Type: License Lamp Wiring Harness COAX
OEM Connector: 13519802
Service Connector: Service by Cable Assembly — See Part Catalog
Description: 1-Way F Coax Type(OG)

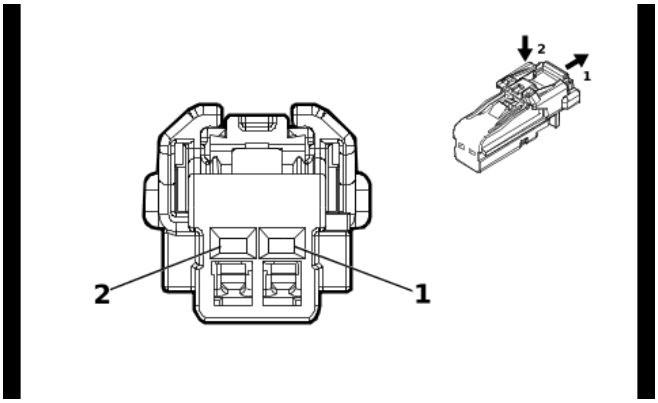
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

B87 Rearview Camera (UVB)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
—	—	Coax Cable	—	Rear Vision Camera Coaxial Video Signal	I	—

B88D Seat Belt Switch - Driver



4115691

Connector Part Information

Harness Type: Front Seat Wiring Harness - Driver
OEM Connector: 6098-8988
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.2 MCON Series(BK)

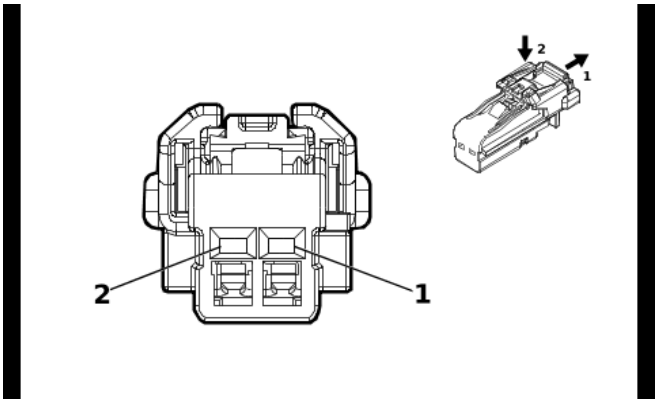
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B88D Seat Belt Switch - Driver

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	OG / BN	238	Driver Seat Belt Switch Signal	I	—
2	0.5	BK / OG	1363	Driver Seat Belt Switch Low Reference	I	—

B88P Seat Belt Switch - Passenger



4115691

Connector Part Information

Harness Type: Front Seat Wiring Harness - Passenger
OEM Connector: 6098-8988
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.2 MCON Series(BK)

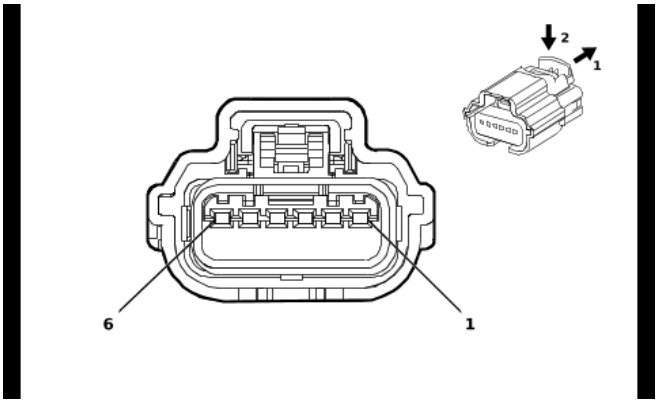
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B88P Seat Belt Switch - Passenger

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	OG / VT	1362	Passenger Seat Belt Switch Signal	I	—
2	0.5	BK / OG	1361	Passenger Seat Belt Switch Low Reference	I	—

B107 Accelerator Pedal Position Sensor



5157678

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 31404-7110
Service Connector: 84773558
Description: 6-Way F 64 Series, Sealed(BK)

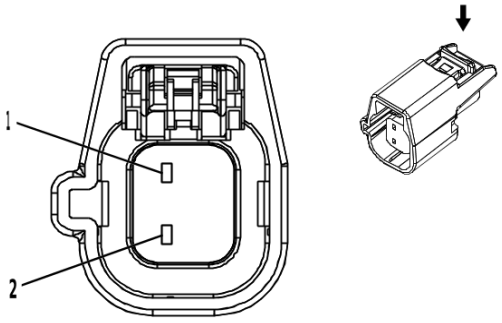
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

B107 Accelerator Pedal Position Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	BN / RD	1274	Accelerator Pedal Position 5V Reference 2	I	—
2	0.5	GN / WH	1162	Accelerator Pedal Position Signal 2	I	—
3	0.5	BK / VT	1272	Accelerator Pedal Position Low Reference 2	I	—
4	0.5	BK / BU	1271	Accelerator Pedal Position Low Reference 1	I	—
5	0.5	YE / WH	1161	Accelerator Pedal Position Signal 1	I	—
6	0.5	WH / RD	1164	Accelerator Pedal Position 5V Reference 1	I	—

B118 Windshield Washer Fluid Level Sensor



3958652

Connector Part Information

Harness Type: Forward Lamp Wiring Harness
OEM Connector: 7287-8378-40
Service Connector: 13593220
Description: 2-Way F 1.5 Series, Sealed(L-GY)

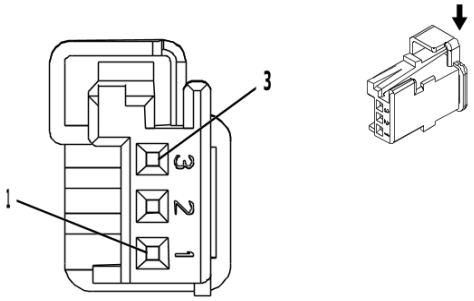
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required

B118 Windshield Washer Fluid Level Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	VT	185	Low Washer Fluid Indicator Control	I	—
2	0.35	BK	250	Ground	I	—

B160 Windshield Temperature and Inside Moisture Sensor



4218883

Connector Part Information

Harness Type: Roof Wiring Harness
OEM Connector: 953697-1
Service Connector: 85587407
Description: 3-Way F 0.64 Micro-Quadlock Series(BK)

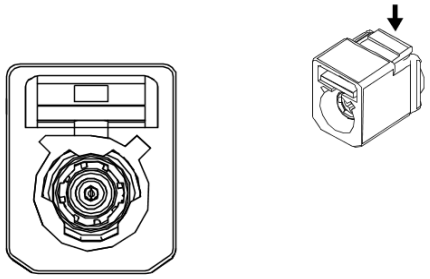
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

B160 Windshield Temperature and Inside Moisture Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	RD / YE	3740	Battery Positive Voltage	I	—
2	0.5	BK	550	Ground	I	—
3	0.35	GN / BU	4119	HVAC Control Module LIN Bus 2	I	—

B174G Frontview Camera - Grille



3293633

Connector Part Information

Harness Type: Front Bumper Fascia Wiring Harness COAX
OEM Connector: 13519801
Service Connector: Service by Cable Assembly — See Part Catalog
Description: 1-Way F Coax Type(BK)

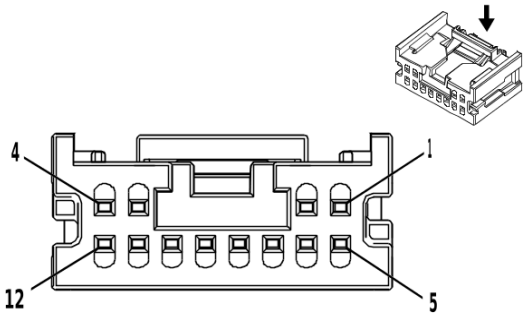
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

B174G Frontview Camera - Grille

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
—	—	Coax Cable	—	Front Vision Camera 2 Coaxial Video Signal	I	—

B174W Frontview Camera - Windshield



3824362

Connector Part Information

Harness Type: Roof Wiring Harness
OEM Connector: 34824-5124
Service Connector: 13507121
Description: 12-Way F Mini 50 Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	19333221	EL-35616-58 (BK)	EL-38125-58

B174W Frontview Camera - Windshield

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	BK	550	Ground	I	(UHX/ UHY/ UEU)
2	—	—	—	Not Occupied	—	—
3	0.35	RD / GY	6240	Battery Positive Voltage	I	(UHX/ UHY/ UEU)

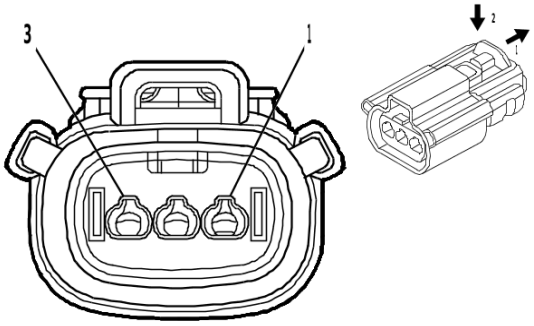
12	—	—	—	Not Occupied	—	—

B197 Charge Port Door Position Switch



5095610

Connector Part Information

Harness Type: High Voltage
OEM Connector: 13526813
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 1.5 Series, Sealed(BK)

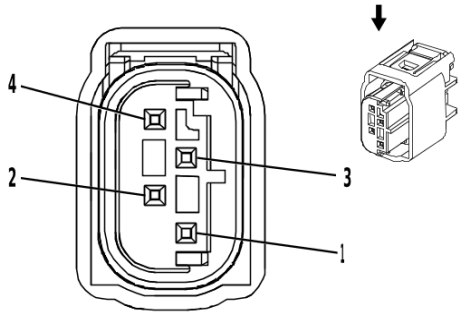
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

B197 Charge Port Door Position Switch

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	WH / BU	3697	Charge Port Door Position Sensor Signal	I	—
2	—	—	—	Not Occupied	—	—
3	—	BK	550	Ground	I	—

B201 Brake Control Brake Pedal Position Sensor



2173574

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 1563215-1
Service Connector: 13314098
Description: 4-Way F 0.64 Micro-Quadlock Series, Sealed(BK)

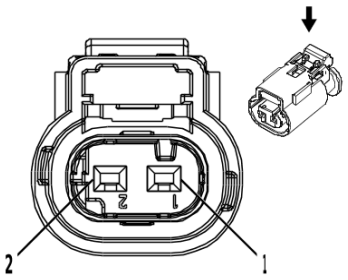
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

B201 Brake Control Brake Pedal Position Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	BU / RD	3335	Brake Pedal Travel Sensor 1 High Reference	I	—
2	0.35	BU / YE	3334	Brake Pedal Travel Sensor 1 Signal	I	—
3	0.5	BK / GY	3417	Brake Pedal Travel Sensor 1 Low Reference	I	—
4	0.35	VT / BN	3333	Brake Pedal Travel Sensor 2 Signal	I	—

B202 Hybrid/EV Electronics Coolant Temperature Sensor



2717066

Connector Part Information

Harness Type: Engine Wiring Harness
OEM Connector: 10010337
Service Connector: 13587326
Description: 2-Way F 1.2 Multilock Series, Sealed(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B202 Hybrid/EV Electronics Coolant Temperature Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	YE / BK	3000	Coolant Temperature Sensor 2 Signal	I	—
2	0.5	BK / BU	6813	Coolant Temperature Sensor 2 Low Reference	I	—

B207 Drive Motor Temperature Sensor

—

Connector Part Information

Harness Type: Transmission
OEM Connector: Not Available
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way

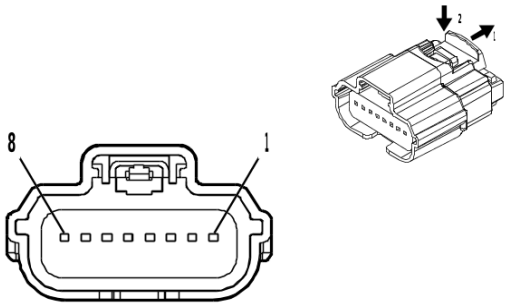
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

B207 Drive Motor Temperature Sensor

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	—	BK	7654	Traction Power Inverter Motor 1 Temperature Sensor Low Reference	I	—
B	—	BK	7653	Traction Power Inverter Motor 1 Temperature Sensor Signal	I	—

B218L Side Object Sensor Module - Left (UKC)



4708234

Connector Part Information

Harness Type: Backup Alarm Wiring Harness
OEM Connector: 31404-9572
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F 64 Series, Sealed(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

B218L Side Object Sensor Module - Left (UKC)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	BU / YE	3810	High Speed GMLAN Serial Data [-] 5	I	UKC
2	0.5	BU / WH	3812	High Speed GMLAN Serial Data [+] 5	I	UKC
3	0.5	BK	1550	Ground	I	UKC
4 - 5	—	—	—	Not Occupied	—	—

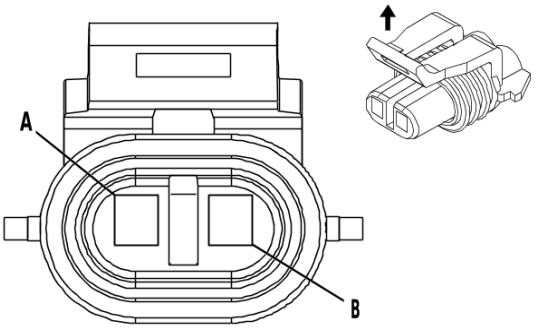
6	—	BK	7646	Drive Motor 1 Position Sensor Sensor 4 Signal	I	—

B258 Hybrid/EV Battery Coolant Level Switch



635009

Connector Part Information

Harness Type: Forward Lamp Wiring Harness
OEM Connector: 12052641
Service Connector: 13586114
Description: 2-Way F 150 Metri-Pack Series, Sealed(BK)

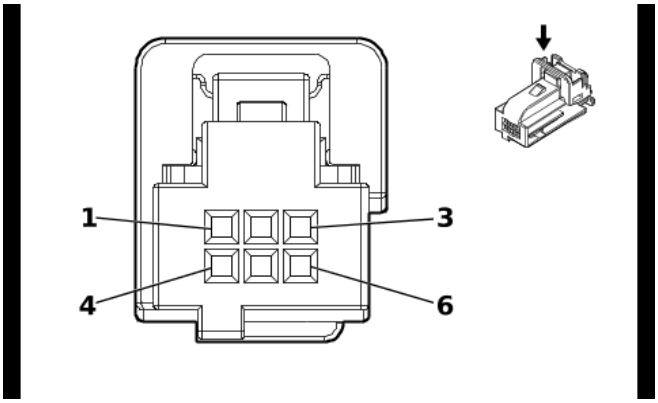
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required

B258 Hybrid/EV Battery Coolant Level Switch

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	0.5	BU / YE	68	Low Coolant Level Indicator Control	I	—
B	0.5	BK / GN	476	Sensor Low Reference	I	—

B305 Ambient Light/Sunload Sensor and Battery State of Charge Indicator



2282896

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: 965413-1
Service Connector: 85587649
Description: 6-Way F 0.64 Micro-Quadlock Series(BK)

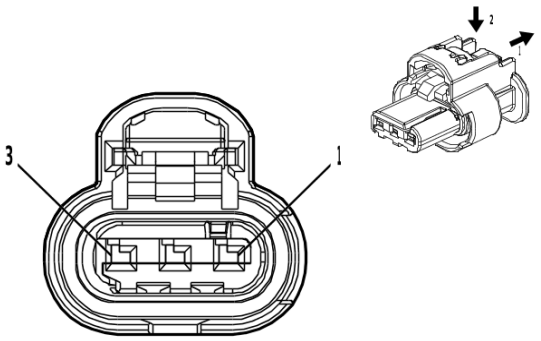
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

B305 Ambient Light/Sunload Sensor and Battery State of Charge Indicator

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	BK	1450	Ground	I	—
2	0.35	GN / WH	4115	Body Control Module LIN Bus 5	I	—
3	0.5	YE / VT	3956	Charging Status Indicator Control	I	—
4	0.5	GY / GN	3957	Control Pilot Signal Indicator Control	I	—
5	0.35	RD / BU	6740	Battery Positive Voltage	I	—
6	0.5	BK	1450	Ground	I	—

B306E Parking Assist Sensor - Rear Left Outer (UD7)



4581126

Connector Part Information

Harness Type: Backup Alarm Wiring Harness
OEM Connector: 1-2296695-1
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 1.2 MCON-CB Series, Sealed(BK)

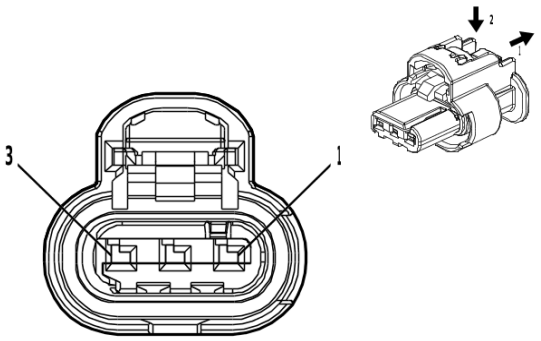
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B306E Parking Assist Sensor - Rear Left Outer (UD7)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	BN / WH	2374	Object Sensor Voltage Reference	I	UD7
2	0.35	YE	2375	Left Rear Outer Parking Assist Sensor Signal	I	UD7
3	0.35	BK / GY	2379	Object Sensor Low Reference	I	UD7

B306F Parking Assist Sensor - Rear Left Middle (UD7)



4581126

Connector Part Information

Harness Type: Backup Alarm Wiring Harness
OEM Connector: 1-2296695-1
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 1.2 MCON-CB Series, Sealed(BK)

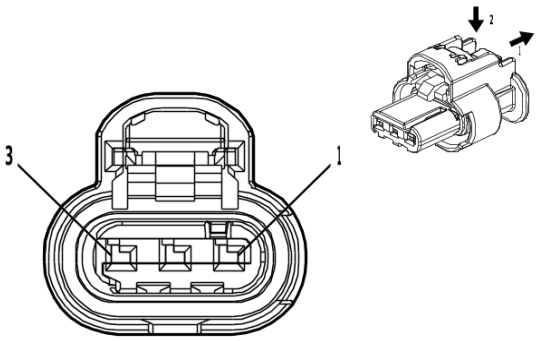
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B306F Parking Assist Sensor - Rear Left Middle (UD7)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	BN / WH	2374	Object Sensor Voltage Reference	I	UD7
2	0.35	YE / BU	2376	Left Rear Middle Parking Assist Sensor Signal	I	UD7
3	0.35	BK / GY	2379	Object Sensor Low Reference	I	UD7

B306G Parking Assist Sensor - Rear Right Middle (UD7)



4581126

Connector Part Information

Harness Type: Backup Alarm Wiring Harness
OEM Connector: 1-2296695-1
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 1.2 MCON-CB Series, Sealed(BK)

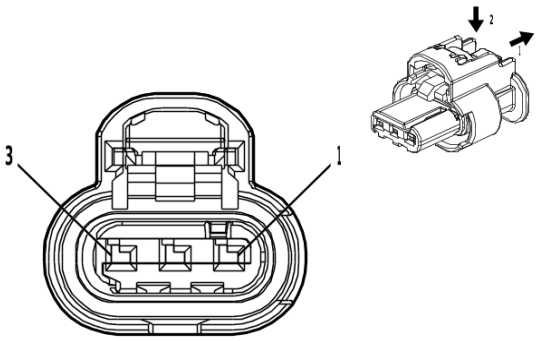
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B306G Parking Assist Sensor - Rear Right Middle (UD7)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	BN / WH	2374	Object Sensor Voltage Reference	I	UD7
2	0.35	YE / WH	2377	Right Rear Middle Parking Assist Sensor Signal	I	UD7
3	0.35	BK / GY	2379	Object Sensor Low Reference	I	UD7

B306H Parking Assist Sensor - Rear Right Outer (UD7)



4581126

Connector Part Information

Harness Type: Backup Alarm Wiring Harness
OEM Connector: 1-2296695-1
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 1.2 MCON-CB Series, Sealed(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

B306H Parking Assist Sensor - Rear Right Outer (UD7)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	BN / WH	2374	Object Sensor Voltage Reference	I	UD7
2	0.35	YE / VT	2378	Right Rear Outer Parking Assist Sensor Signal	I	UD7
3	0.35	BK / GY	2379	Object Sensor Low Reference	I	UD7

C1 Battery ((-) Battery)

—

Connector Part Information

Harness Type: Battery Cable Negative Wiring Harness
OEM Connector: CBT308-018
Service Connector: Service by Harness - See Part Catalog
Description: 1-Way Battery Connection

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C1 Battery ((-) Battery)

OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5D Hybrid/EV Battery Module 4 X2

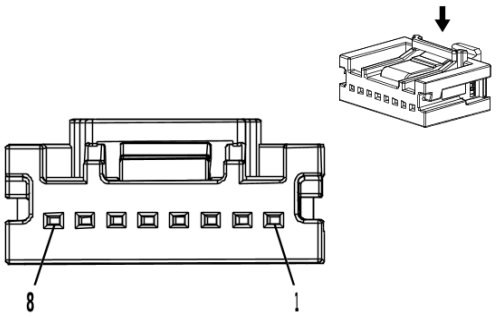
Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	YE	4520	Hybrid/EV Battery Cell Voltage Signal 39	I	—
2	—	GN	4518	Hybrid/EV Battery Cell Voltage Signal 37	I	—
3	—	BU / GN	4516	Hybrid/EV Battery Cell Voltage Signal 35	I	—
4	—	BU	5592	Hybrid/EV Battery Cell Voltage Signal 33	I	—
5	—	BN	5590	Hybrid/EV Battery Cell Voltage Signal 31	I	—
6 - 8	—	—	—	Not Occupied	—	—

C5E Hybrid/EV Battery Module 5 X1



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

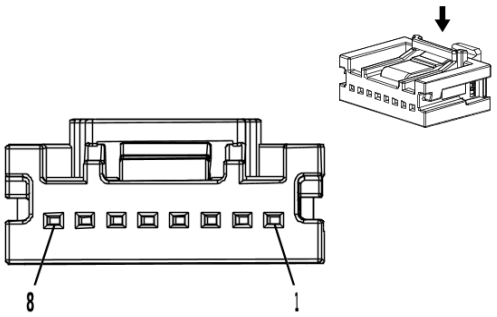
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5E Hybrid/EV Battery Module 5 X1

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	PK	4529	Hybrid/EV Battery Cell Voltage Signal 48	I	—
2	—	GN / WH	4527	Hybrid/EV Battery Cell Voltage Signal 46	I	—
3	—	OG / RD	4525	Hybrid/EV Battery Cell Voltage Signal 44	I	—
4	—	GY	4523	Hybrid/EV Battery Cell Voltage Signal 42	I	—
5	—	OG	5403	Hybrid/EV Battery Pack Monitor Low Reference	I	—
6 - 8	—	—	—	Not Occupied	—	—

C5E Hybrid/EV Battery Module 5 X2



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

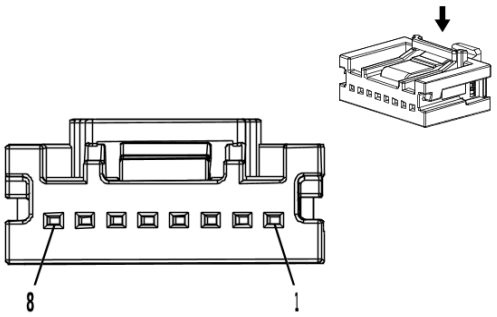
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5E Hybrid/EV Battery Module 5 X2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	L-BU	4528	Hybrid/EV Battery Cell Voltage Signal 47	I	—
2	—	BU	4526	Hybrid/EV Battery Cell Voltage Signal 45	I	—
3	—	BN	4524	Hybrid/EV Battery Cell Voltage Signal 43	I	—
4	—	WH	4522	Hybrid/EV Battery Cell Voltage Signal 41	I	—
5 - 8	—	—	—	Not Occupied	—	—

C5F Hybrid/EV Battery Module 6 X1



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5F Hybrid/EV Battery Module 6 X1

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	GN	5403	Hybrid/EV Battery Pack Monitor Low Reference	I	—
2	—	YE	4530	Hybrid/EV Battery Cell Voltage Signal 49	I	—
3	—	OG	4532	Hybrid/EV Battery Cell Voltage Signal 51	I	—

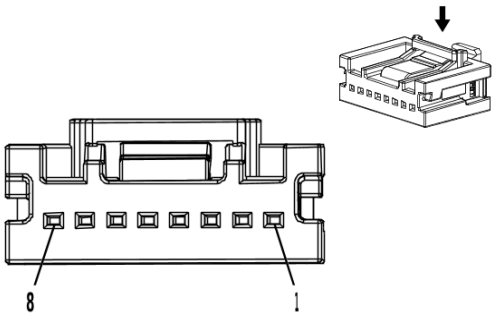
6	—	GN / WH	4543	Hybrid/EV Battery Cell Voltage Signal 58	I	—
7 - 8	—	—	—	Not Occupied	—	—

C5F Hybrid/EV Battery Module 6 X2



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

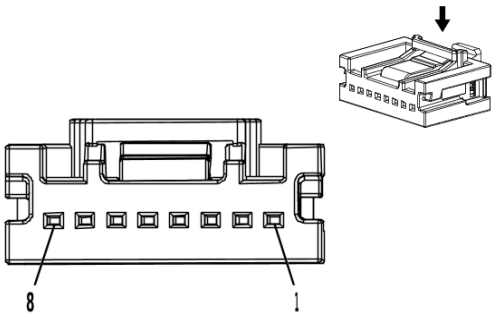
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5F Hybrid/EV Battery Module 6 X2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	L-BU	4529	Hybrid/EV Battery Cell Voltage Signal 48	I	—
2	—	VT	4531	Hybrid/EV Battery Cell Voltage Signal 50	I	—
3	—	WH	4533	Hybrid/EV Battery Cell Voltage Signal 52	I	—
4	—	GN / WH	4537	Hybrid/EV Battery Cell Voltage Signal 55	I	—
5	—	BU	4541	Hybrid/EV Battery Cell Voltage Signal 57	I	—
6 - 8	—	—	—	Not Occupied	—	—

C5G Hybrid/EV Battery Module 7 X1



4017639

Connector Part Information

Harness Type: Battery Module 7 Jumper
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

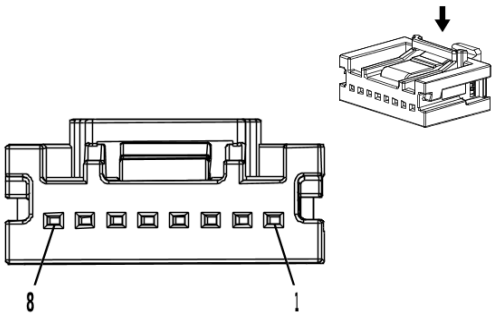
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5G Hybrid/EV Battery Module 7 X1

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	GY	4519	Hybrid/EV Battery Cell Voltage Signal 38	I	—
2	—	OG	4549	Hybrid/EV Battery Cell Voltage Signal 64	I	—
3	—	YE	4547	Hybrid/EV Battery Cell Voltage Signal 62	I	—
4	—	GN	4545	Hybrid/EV Battery Cell Voltage Signal 60	I	—
5	—	L-GN	5403	Hybrid/EV Battery Pack Monitor Low Reference	I	—
6 - 8	—	—	—	Not Occupied	—	—

C5G Hybrid/EV Battery Module 7 X2



4017639

Connector Part Information

Harness Type: Battery Module 7 Jumper
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

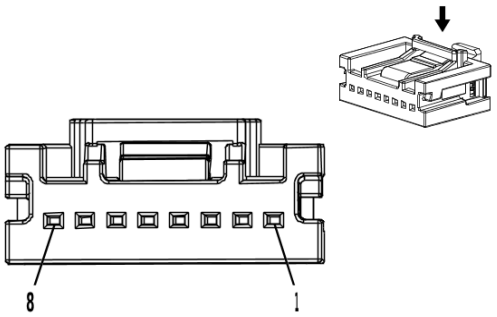
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5G Hybrid/EV Battery Module 7 X2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	WH	4518	Hybrid/EV Battery Cell Voltage Signal 37	I	—
2	—	VT	4548	Hybrid/EV Battery Cell Voltage Signal 63	I	—
3	—	L-BU	4546	Hybrid/EV Battery Cell Voltage Signal 61	I	—
4	—	PK	4544	Hybrid/EV Battery Cell Voltage Signal 59	I	—
5 - 8	—	—	—	Not Occupied	—	—

C5H Hybrid/EV Battery Module 8 X1



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

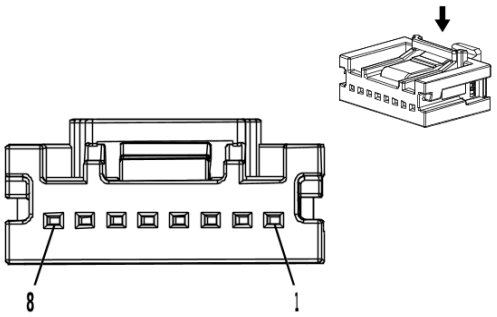
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5H Hybrid/EV Battery Module 8 X1

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	BN	5403	Hybrid/EV Battery Pack Monitor Low Reference	I	—
2	—	BU	4556	Hybrid/EV Battery Cell Voltage Signal 68	I	—
3	—	L-GN	4558	Hybrid/EV Battery Cell Voltage Signal 70	I	—
4	—	GN	4561	Hybrid/EV Battery Cell Voltage Signal 72	I	—
5	—	YE	4563	Hybrid/EV Battery Cell Voltage Signal 74	I	—
6	—	OG	4565	Hybrid/EV Battery Cell Voltage Signal 76	I	—
7 - 8	—	—	—	Not Occupied	—	—

C5H Hybrid/EV Battery Module 8 X2



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

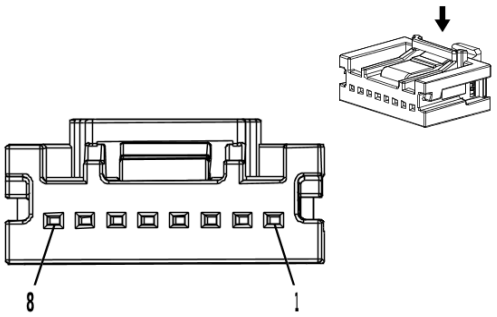
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5H Hybrid/EV Battery Module 8 X2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	OG	4555	Hybrid/EV Battery Cell Voltage Signal 67	I	—
2	—	GN / WH	4557	Hybrid/EV Battery Cell Voltage Signal 69	I	—
3	—	PK	4560	Hybrid/EV Battery Cell Voltage Signal 71	I	—
4	—	L-BU	4562	Hybrid/EV Battery Cell Voltage Signal 73	I	—
5	—	VT	4564	Hybrid/EV Battery Cell Voltage Signal 75	I	—
6 - 8	—	—	—	Not Occupied	—	—

C5J Hybrid/EV Battery Module 9 X1



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

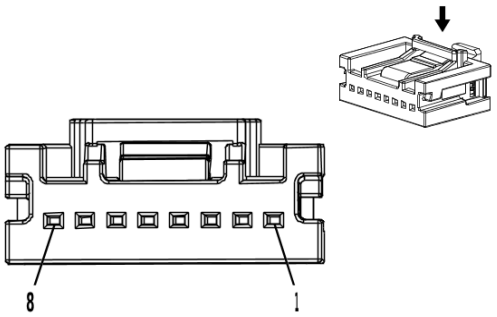
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5J Hybrid/EV Battery Module 9 X1

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	YE	4575	Hybrid/EV Battery Cell Voltage Signal 86	I	—
2	—	GN	4573	Hybrid/EV Battery Cell Voltage Signal 84	I	—
3	—	L-GN	4571	Hybrid/EV Battery Cell Voltage Signal 82	I	—
4	—	BU	4569	Hybrid/EV Battery Cell Voltage Signal 80	I	—
5	—	BN	4567	Hybrid/EV Battery Cell Voltage Signal 78	I	—
6	—	WH	5403	Hybrid/EV Battery Pack Monitor Low Reference	I	—
7 - 8	—	—	—	Not Occupied	—	—

C5J Hybrid/EV Battery Module 9 X2



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

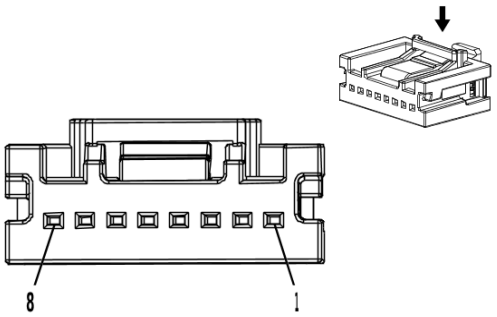
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5J Hybrid/EV Battery Module 9 X2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	L-BU	4574	Hybrid/EV Battery Cell Voltage Signal 85	I	—
2	—	PK	4572	Hybrid/EV Battery Cell Voltage Signal 83	I	—
3	—	GN / WH	4570	Hybrid/EV Battery Cell Voltage Signal 81	I	—
4	—	OG	4568	Hybrid/EV Battery Cell Voltage Signal 79	I	—
5	—	GY	4566	Hybrid/EV Battery Cell Voltage Signal 77	I	—
6 - 8	—	—	—	Not Occupied	—	—

C5K Hybrid/EV Battery Module 10 X1



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

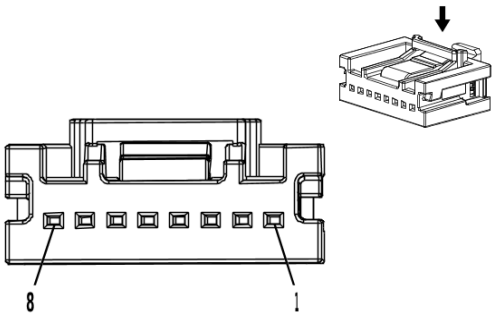
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5K Hybrid/EV Battery Module 10 X1

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	VT	5403	Hybrid/EV Battery Pack Monitor Low Reference	I	—
2	—	WH	4577	Hybrid/EV Battery Cell Voltage Signal 88	I	—
3	—	BN	2390	Hybrid/EV Battery Cell Voltage Signal 90	I	—
4	—	BU	2392	Hybrid/EV Battery Cell Voltage Signal 92	I	—
5	—	L-GN	2394	Hybrid/EV Battery Cell Voltage Signal 94	I	—
6	—	PK	2396	Hybrid/EV Battery Cell Voltage Signal 96	I	—
7 - 8	—	—	—	Not Occupied	—	—

C5K Hybrid/EV Battery Module 10 X2



4017639

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 34791-5180
Service Connector: Service by Harness - See Part Catalog
Description: 8-Way F Mini 50 Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

C5K Hybrid/EV Battery Module 10 X2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	OG	4576	Hybrid/EV Battery Cell Voltage Signal 87	I	—
2	—	GY	2389	Hybrid/EV Battery Cell Voltage Signal 89	I	—
3	—	OG	2391	Hybrid/EV Battery Cell Voltage Signal 91	I	—
4	—	GN / WH	2393	Hybrid/EV Battery Cell Voltage Signal 93	I	—

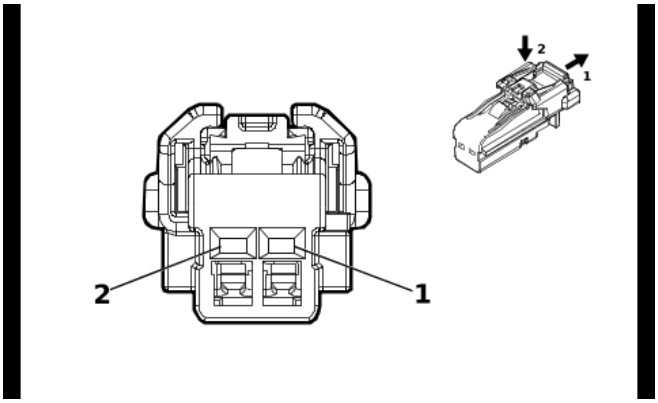
6 - 8	—	—	—	Not Occupied	—	—

E1H Accent Lamp - Right Instrument Panel



4115691

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: 6098-8988
Service Connector: 19352066
Description: 2-Way F 1.2 MCON Series(BK)

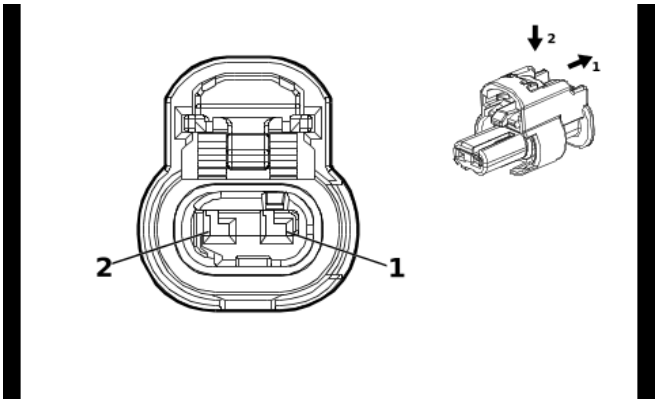
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

E1H Accent Lamp - Right Instrument Panel

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	WH / YE	7557	Interior Door Handle Accent Lighting Control	I	C9J
2	0.35	BK	1250	Ground	I	C9J

E2LR Side Marker Lamp - Left Rear



4649903

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 1-2296694-1
Service Connector: 85519075
Description: 2-Way F 1.2 MCON Series, Sealed(BK)

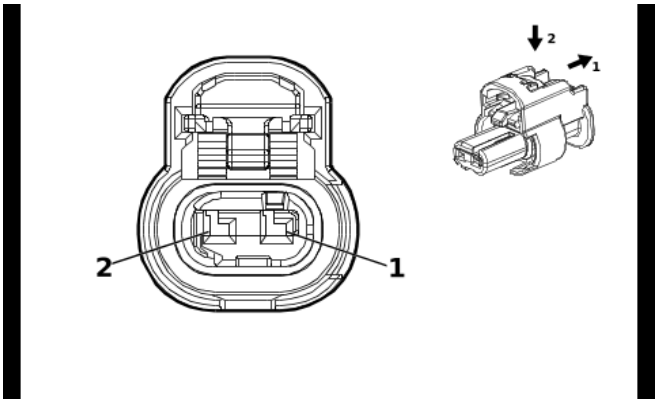
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

E2LR Side Marker Lamp - Left Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	VT / GY	709	Left Park Lamp Control	I	—
2	0.5	BK	1050	Ground	I	—

E2RR Side Marker Lamp - Right Rear



4649903

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 1-2296694-1
Service Connector: 85519075
Description: 2-Way F 1.2 MCON Series, Sealed(BK)

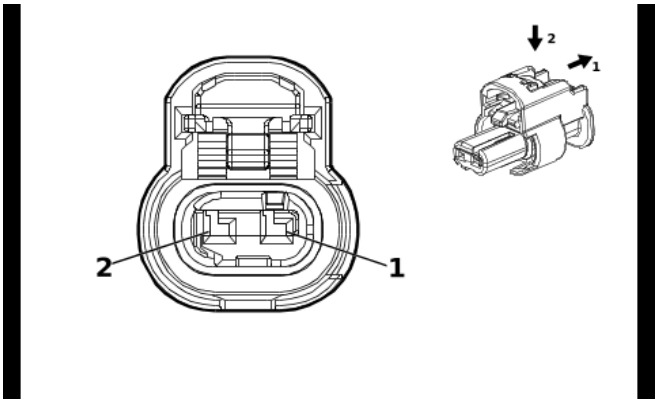
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

E2RR Side Marker Lamp - Right Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / BN	309	Right Park Lamp Control	I	—
2	0.5	BK	1550	Ground	I	—

E5A Backup Lamp - Left



4649903

Connector Part Information

Harness Type: Backup Alarm Wiring Harness
OEM Connector: 1-2296694-1
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.2 MCON Series, Sealed(BK)

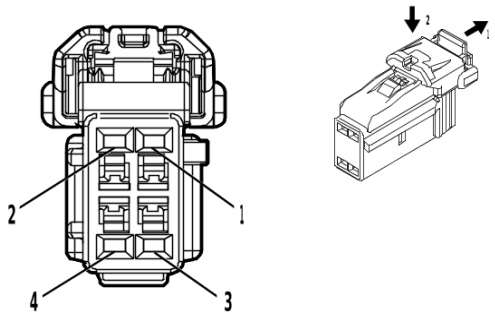
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

E5A Backup Lamp - Left

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GN / WH	24	Backup Lamp Control	I	—
2	0.5	BK	1950	Ground	I	—

E5AA Tail/Stop Lamp - Left



4872683

Connector Part Information

Harness Type: Liftgate Wiring Harness
OEM Connector: 6098-8435
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way F 1.2 Series(BK)

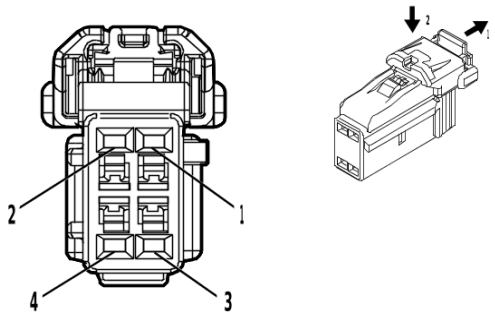
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

E5AA Tail/Stop Lamp - Left

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	VT / GY	709	Left Park Lamp Control	I	—
2	0.5	BK	1150	Ground	I	—
3 - 4	—	—	—	Not Occupied	—	—

E5AB Tail/Stop Lamp - Right



4872683

Connector Part Information

Harness Type: Liftgate Wiring Harness
OEM Connector: 6098-8435
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way F 1.2 Series(BK)

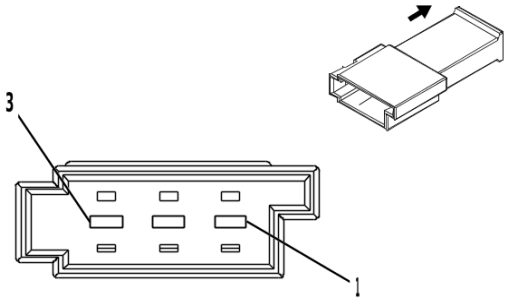
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-16 (L-GN)	No Tool Required

E5AB Tail/Stop Lamp - Right

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / BN	309	Right Park Lamp Control	I	—
2	0.5	BK	1950	Ground	I	—
3 - 4	—	—	—	Not Occupied	—	—

E6 Center High Mounted Stop Lamp



4538959

Connector Part Information

Harness Type: Liftgate Jumper Wiring Harness
OEM Connector: 24436253
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way M 1.6 Micro-Timer Series(BK)

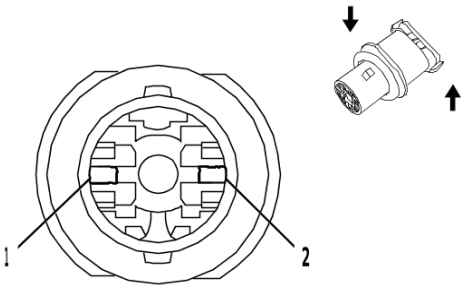
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-34 (YE)	No Tool Required

E6 Center High Mounted Stop Lamp

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	—	—	Not Occupied	—	—
2	0.5	BK	1050	Ground	I	—
3	0.5	BN / YE	820	Center High Mounted Stop Lamp Supply Voltage	I	—

E7L License Plate Lamp - Left



2352565

Connector Part Information

Harness Type: License Lamp Wiring Harness
OEM Connector: 13503224
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F Lamp Socket Wedge Base, Sealed(BK)

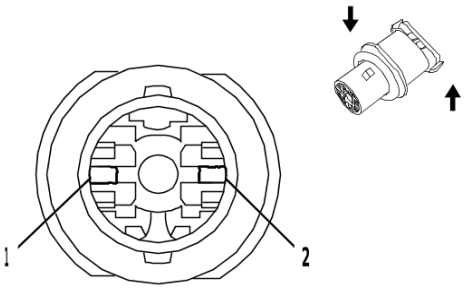
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

E7L License Plate Lamp - Left

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	GN / YE	6846	Rear License Plate Lamp Control	I	—
2	0.35	BK	1050	Ground	I	—

E7R License Plate Lamp - Right



2352565

Connector Part Information

Harness Type: License Lamp Wiring Harness
OEM Connector: 13503224
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F Lamp Socket Wedge Base, Sealed(BK)

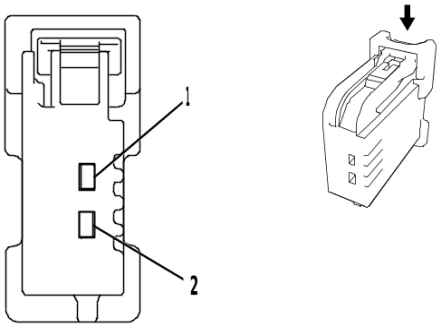
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

E7R License Plate Lamp - Right

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	GN / YE	6846	Rear License Plate Lamp Control	I	—
2	0.35	BK	1050	Ground	I	—

E8S Rear Compartment Courtesy Lamp



2173586

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 6098-5510
Service Connector: 13584097
Description: 2-Way F 1.5 Series(BK)

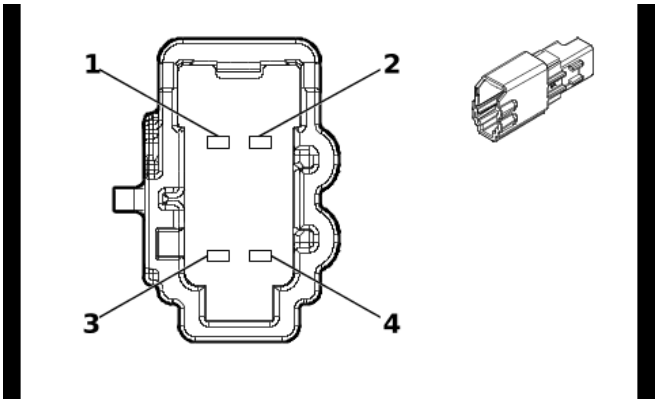
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required

E8S Rear Compartment Courtesy Lamp

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GN / GY	737	Rear Compartment Courtesy Lamp Control	I	—
2	0.5	BK	1150	Ground	I	—

E14A Seat Heating Element - Driver Back (KA1)



5423974

Connector Part Information

Harness Type: Front Seat Wiring Harness - Driver
OEM Connector: 6098-9049
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way M 1.2 MCON Series(GY)

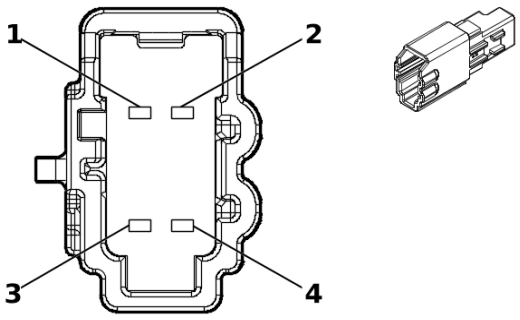
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-17 (L-GN)	No Tool Required

E14A Seat Heating Element - Driver Back (KA1)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	BN / VT	2077	Driver Seat Heating Element Control	I	—
2	0.5	BU	2425	Driver Seat Back Heating Temperature Sensor Signal	I	—
3	0.5	BK / YE	2080	Driver Heated Seat Thermistor Low Reference	I	—
4	0.75	VT / BK	2424	Driver Seat Back Heating Element Low Reference	I	—

E14B Seat Heating Element - Driver Cushion (KA1)



5360963

Connector Part Information

Harness Type: Front Seat Wiring Harness - Driver
OEM Connector: 6098-9046
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way M 1.2 MCON Series(BK)

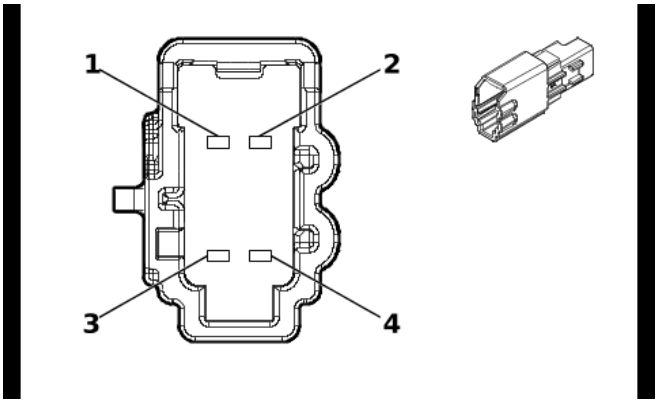
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-17 (L-GN)	No Tool Required

E14B Seat Heating Element - Driver Cushion (KA1)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	BN / VT	2077	Driver Seat Heating Element Control	I	—
2	0.5	YE / GY	2079	Driver Seat Heating Temperature Sensor Signal	I	—
3	0.5	BK / YE	2080	Driver Heated Seat Thermistor Low Reference	I	—
4	0.75	VT / BK	2424	Driver Seat Back Heating Element Low Reference	I	—

E14C Seat Heating Element - Passenger Back (KA1)



5423974

Connector Part Information

Harness Type: Front Seat Wiring Harness - Passenger
OEM Connector: 6098-9049
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way M 1.2 MCON Series(GY)

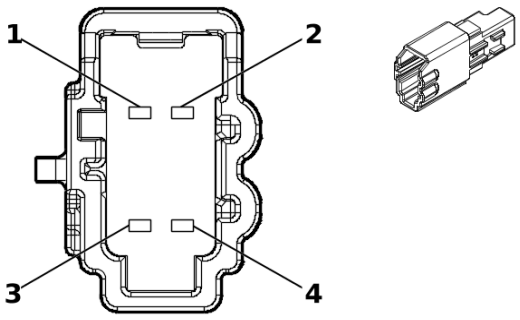
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-17 (L-GN)	No Tool Required

E14C Seat Heating Element - Passenger Back (KA1)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	BN / BU	2479	Passenger Seat Heating Element Control	I	—
2	0.5	WH / BU	2436	Passenger Seat Back Heating Temperature Sensor Signal	I	—
3	0.5	BK / GY	2435	Passenger Heated Seat Thermistor Low Reference	I	—
4	0.75	GY / BK	2480	Passenger Seat Heating Element Low Reference	I	—

E14D Seat Heating Element - Passenger Cushion (KA1)



5360963

Connector Part Information

Harness Type: Front Seat Wiring Harness - Passenger
OEM Connector: 6098-9046
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way M 1.2 MCON Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-17 (L-GN)	No Tool Required

E14D Seat Heating Element - Passenger Cushion (KA1)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	BN / BU	2479	Passenger Seat Heating Element Control	I	—
2	0.5	WH / GY	2434	Passenger Seat Heating Temperature Sensor Signal	I	—
3	0.5	BK / GY	2435	Passenger Heated Seat Thermistor Low Reference	I	—
4	0.75	GY / BK	2480	Passenger Seat Heating Element Low Reference	I	—

E15 Steering Wheel Heater X1 (KI3)

—

Connector Part Information

Harness Type: Steering Wheel
OEM Connector: Not Available
Service Connector: Service by Harness - See Part Catalog
Description: 1-Way

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

E15 Steering Wheel Heater X1 (KI3)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
4	—	BK	1150	Ground	I	—

E15 Steering Wheel Heater X2 (KI3)

—

Connector Part Information

Harness Type: Steering Wheel
OEM Connector: Not Available
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way

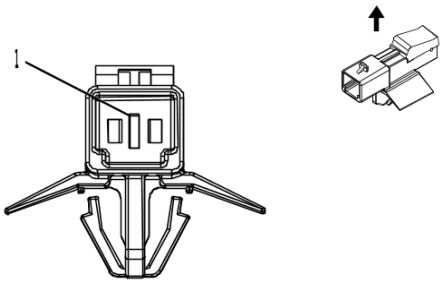
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	No Tool Required	No Tool Required

E15 Steering Wheel Heater X2 (KI3)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	BN	1650	Ground	I	—
2	—	GY	5885	Steering Wheel Heating Voltage Reference	I	—
3	—	WH	5888	Steering Wheel Heating High Control	I	—
4	—	BK	1150	Ground	I	—

E18 Rear Defogger Grid X1



2845586

Connector Part Information

Harness Type: Liftgate Wiring Harness
OEM Connector: 2109209-2
Service Connector: Service by Harness - See Part Catalog
Description: 1-Way F 2.8 Junior Power Timer Series(BK)

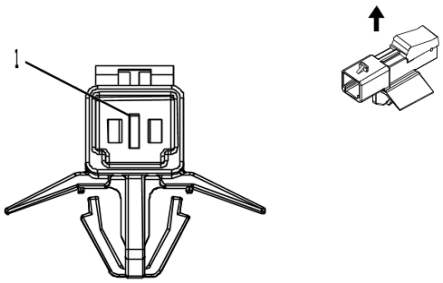
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-5 (PU)	No Tool Required

E18 Rear Defogger Grid X1

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	2	BN / VT	293	Rear Defogger Grid Control	I	—

E18 Rear Defogger Grid X2



2845586

Connector Part Information

Harness Type: Liftgate Wiring Harness
OEM Connector: 2109209-2
Service Connector: Service by Harness - See Part Catalog
Description: 1-Way F 2.8 Junior Power Timer Series(BK)

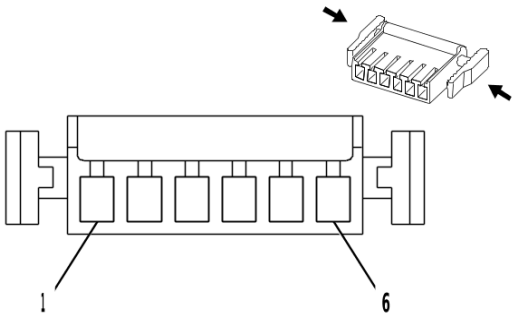
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-5 (PU)	No Tool Required

E18 Rear Defogger Grid X2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	2	BK	1950	Ground	I	—

E37D Dome/Reading Lamps - Overhead Console



2173602

Connector Part Information

Harness Type: Roof Wiring Harness
OEM Connector: 13726957
Service Connector: 13576539
Description: 6-Way F 0.64 Micro-Quadlock Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

E37D Dome/Reading Lamps - Overhead Console

1715223

Connector Part Information

Harness Type: Low Voltage Battery
OEM Connector: 31410-0200
Service Connector: Service by Harness - See Part Catalog
Description: 20-Way F 64 Series,(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool

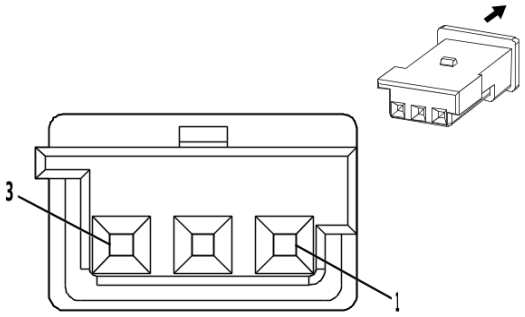
K89 Immobilizer Control Module



2179789

Connector Part Information

Harness Type: Front Floor Console Wiring Harness
OEM Connector: 4-1718346-1
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 0.64 Micro-Quadlock Series(PU)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

K89 Immobilizer Control Module

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	GN / GY	3277	Vehicle Anti-Theft System Immobilizer Low Reference	I	—
2	0.35	GN / VT	7533	Immobilizer LIN Bus 1	I	—

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Driver
OEM Connector: 34062-0022
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.5 Series, Sealed(L-GY)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

P19AG Speaker - Left Front Door (UQ3)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
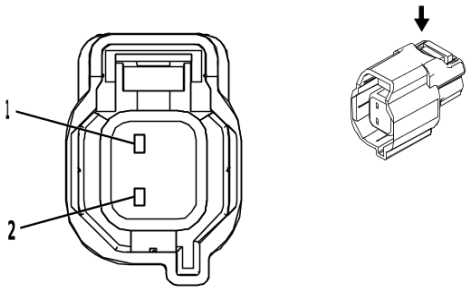
1	0.75	BN / BU	118	Left Front Speaker [-] Control 1	I	UQ3
2	0.75	BU	201	Left Front Speaker 1 [+] Control	I	UQ3

P19AG Speaker - Left Front Door (UQA)



2900396

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Driver
OEM Connector: 34062-0022
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.5 Series, Sealed(L-GY)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

P19AG Speaker - Left Front Door (UQA)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
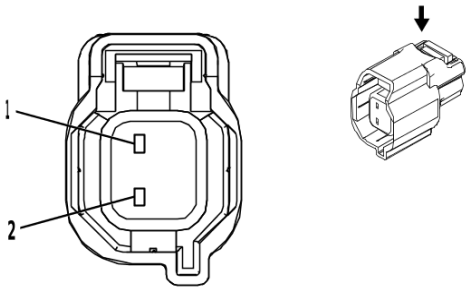
1	0.75	BN / BU	118	Left Front Speaker [-] Control 1	I	UQA
2	0.75	BU	201	Left Front Speaker 1 [+] Control	I	UQA

P19AH Speaker - Right Front Door (UQ3)



2900396

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Passenger
OEM Connector: 34062-0022
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.5 Series, Sealed(L-GY)

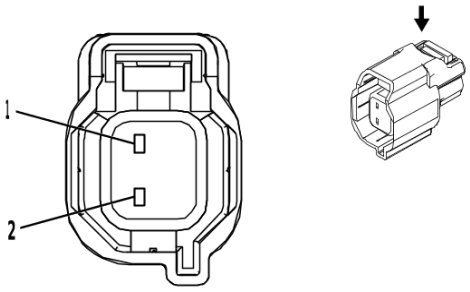
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

P19AH Speaker - Right Front Door (UQ3)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	YE / BK	117	Right Front Speaker [-] Control 1	I	UQ3
2	0.75	YE	200	Right Front Speaker 1 [+] Control	I	UQ3

P19AH Speaker - Right Front Door (UQA)



2900396

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Passenger
OEM Connector: 34062-0022
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.5 Series, Sealed(L-GY)

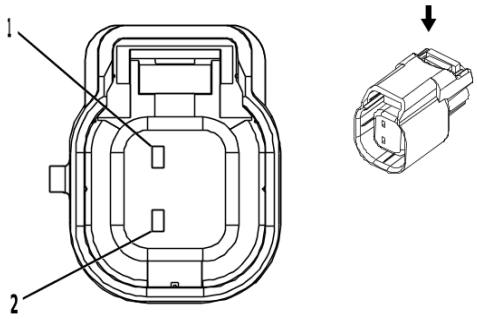
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

P19AH Speaker - Right Front Door (UQA)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	YE / BK	117	Right Front Speaker [-] Control 1	I	UQA
2	0.75	YE	200	Right Front Speaker 1 [+] Control	I	UQA

P19AL Speaker - Left Rear Door (UQ3)



4115616

Connector Part Information

Harness Type: Rear Door Door Wiring Harness - Left Rear
OEM Connector: 34062-0046
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.5 Series, Sealed(BK)

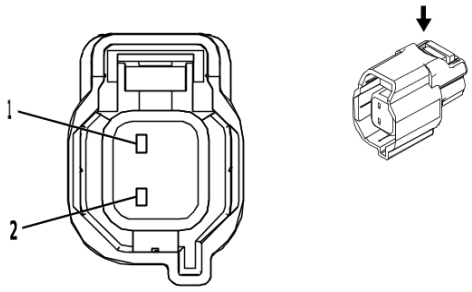
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

P19AL Speaker - Left Rear Door (UQ3)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	GN / BK	116	Left Rear Speaker [-] Control	I	UQ3
2	0.75	GN	199	Left Rear Speaker [+] Control	I	UQ3

P19AL Speaker - Left Rear Door (UQA)



2900396

Connector Part Information

Harness Type: Rear Door Door Wiring Harness - Left Rear
OEM Connector: 34062-0022
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.5 Series, Sealed(L-GY)

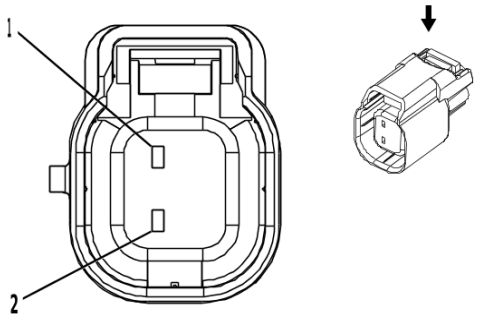
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

P19AL Speaker - Left Rear Door (UQA)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	GN / BK	116	Left Rear Speaker [-] Control	I	UQA
2	0.75	GN	199	Left Rear Speaker [+] Control	I	UQA

P19AM Speaker - Right Rear Door (UQ3)



4115616

Connector Part Information

Harness Type: Rear Door Door Wiring Harness - Right Rear
OEM Connector: 34062-0046
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.5 Series, Sealed(BK)

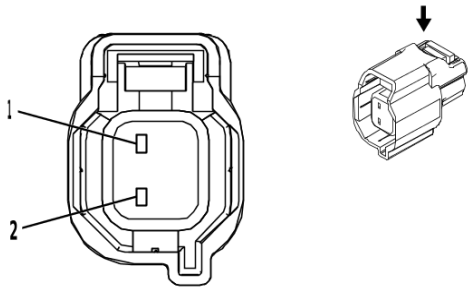
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

P19AM Speaker - Right Rear Door (UQ3)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	BU / BK	115	Right Rear Speaker [-] Control	I	UQ3
2	0.75	WH	46	Right Rear Speaker [+] Control	I	UQ3

P19AM Speaker - Right Rear Door (UQA)



2900396

Connector Part Information

Harness Type: Rear Door Door Wiring Harness - Right Rear
OEM Connector: 34062-0022
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.5 Series, Sealed(L-GY)

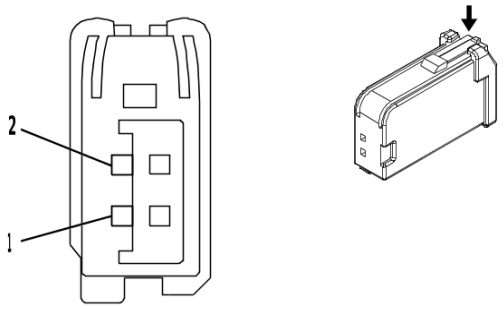
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-2A (GY)	No Tool Required

P19AM Speaker - Right Rear Door (UQA)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	BU / BK	115	Right Rear Speaker [-] Control	I	UQA
2	0.75	WH	46	Right Rear Speaker [+] Control	I	UQA

P19H Speaker - Left Front Tweeter



3989818

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: AIT2PB-02G-1AK
Service Connector: 19332379
Description: 2-Way F 0.64 Series(BK)

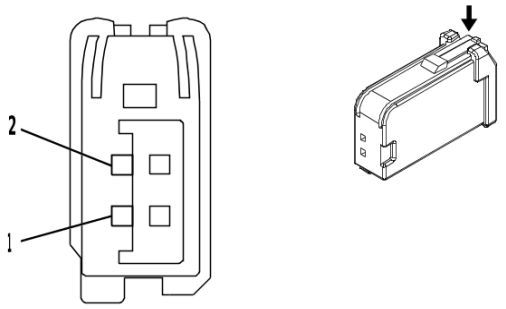
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

P19H Speaker - Left Front Tweeter

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	BN / BU	118	Left Front Speaker [-] Control 1	I	UQ3
	0.75	BN / BU	118	Left Front Speaker [-] Control 1	I	UQA
2	0.75	BU	201	Left Front Speaker 1 [+] Control	I	UQ3
	0.75	BU	201	Left Front Speaker 1 [+] Control	I	UQA

P19V Speaker - Right Front Tweeter



3989818

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: AIT2PB-02G-1AK
Service Connector: 19332379
Description: 2-Way F 0.64 Series(BK)

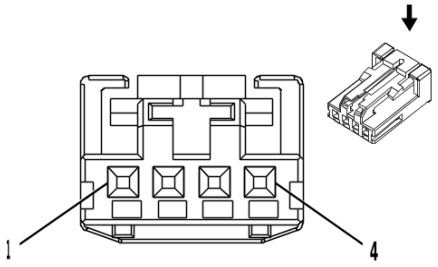
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

P19V Speaker - Right Front Tweeter

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.75	YE / BK	117	Right Front Speaker [-] Control 1	I	UQ3
	0.75	YE / BK	117	Right Front Speaker [-] Control 1	I	UQA
2	0.75	YE	200	Right Front Speaker 1 [+] Control	I	UQ3
	0.75	YE	200	Right Front Speaker 1 [+] Control	I	UQA

P43 Collision Alert Indicators (UEU/UHX/UHY)



2717162

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: 936119-1
Service Connector: 19367524
Description: 4-Way F 0.64 Micro-Quadlock Series(BK)

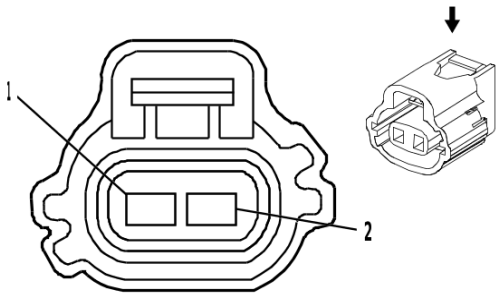
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

P43 Collision Alert Indicators (UEU/UHX/UHY)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	VT / BK	2139	Run/Crank Ignition 1 Voltage	I	(UHX/ UHY/ UEU)
2	0.35	GY / YE	3885	Forward Collision Alert LED Control	I	(UHX/ UHY/ UEU)
3	0.35	WH / GN	3535	Reflected LED Display Dimming Control	I	(UHX/ UHY/ UEU)
4	0.5	BK	1250	Ground	I	(UHX/ UHY/ UEU)

P48F Pedestrian Alert Sound Speaker - Front



1331453

Connector Part Information

Harness Type: Engine Wiring Harness
OEM Connector: 7283-7526-30
Service Connector: 86778122
Description: 2-Way F 090 Series, Sealed(BK)

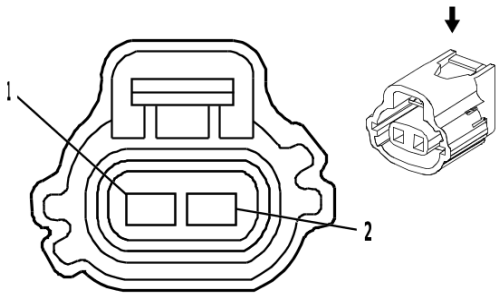
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-18 (BK)	No Tool Required

P48F Pedestrian Alert Sound Speaker - Front

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / GN	4338	Pedestrian Alert Sound Speaker [+] Control	I	—
2	0.5	VT / BN	4337	Pedestrian Alert Sound Speaker [-] Control	I	—

P48R Pedestrian Alert Sound Speaker - Rear



1331453

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 7283-7526-30
Service Connector: 86778122
Description: 2-Way F 090 Series, Sealed(BK)

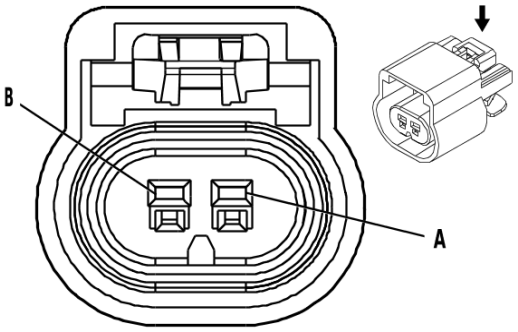
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-18 (BK)	No Tool Required

P48R Pedestrian Alert Sound Speaker - Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GY / GN	4338	Pedestrian Alert Sound Speaker [+] Control	I	—
2	0.5	VT / BN	4337	Pedestrian Alert Sound Speaker [-] Control	I	—

R6E Terminating Resistor - High Speed Extension Bus 1



523630

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 13510085
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 150 GT Series, Sealed(BK)

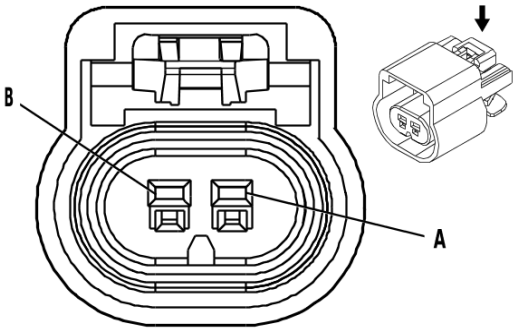
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required

R6E Terminating Resistor - High Speed Extension Bus 1

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	0.35	BU / GY	3935	High Speed GMLAN Serial Data [+] 8	I	KSG
B	0.35	WH / GY	3936	High Speed GMLAN Serial Data [-] 8	I	KSG

R6F Terminating Resistor - High Speed Extension Bus 2



523630

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: 13510085
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 150 GT Series, Sealed(BK)

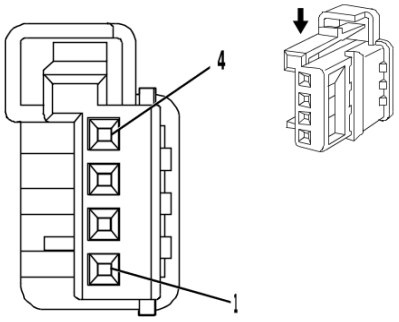
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required

R6F Terminating Resistor - High Speed Extension Bus 2

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	0.35	BU / GN	1304	High Speed GMLAN Serial Data [+] 9	I	—
B	0.35	WH / GN	1305	High Speed GMLAN Serial Data [-] 9	I	—

S13D Door Lock Switch - Driver



2173576

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Driver
OEM Connector: 1379029-2
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way F 0.64 Micro-Quadlock Series(WH)

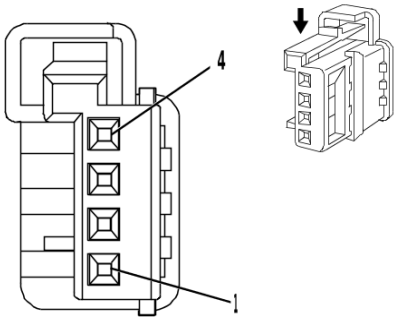
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

S13D Door Lock Switch - Driver

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	YE	6817	LED Backlight Dimming Control 1	I	—
2	0.5	BN / YE	780	Driver Door Lock Switch Lock Signal	I	—
3	0.5	BN / WH	781	Driver Door Lock Switch Unlock Signal	I	—
4	0.5	BK	550	Ground	I	—

S13P Door Lock Switch - Passenger



2173576

Connector Part Information

Harness Type: Front Side Door Door Wiring Harness - Passenger
OEM Connector: 1379029-2
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way F 0.64 Micro-Quadlock Series(WH)

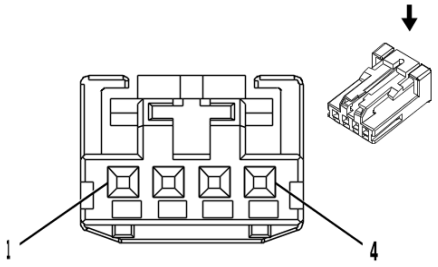
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

S13P Door Lock Switch - Passenger

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	YE	6817	LED Backlight Dimming Control 1	I	—
2	0.5	YE / VT	244	Passenger Door Lock Switch Lock Control	I	—
3	0.5	BN / VT	245	Passenger Door Lock Switch Unlock Control	I	—
4	0.5	BK	750	Ground	I	—

S26 Hazard Warning Switch



2717162

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: 1-936119-1
Service Connector: 19367524
Description: 4-Way F 0.64 Micro-Quadlock Series(BK)

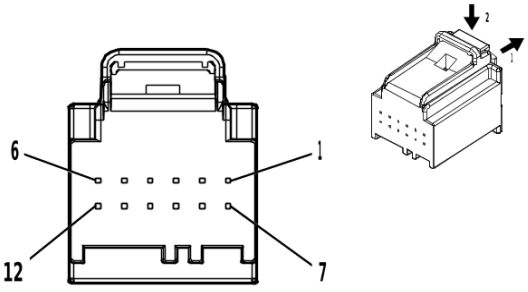
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

S26 Hazard Warning Switch

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	GN / WH	111	Hazard Warning Switch Signal	I	—
2	0.5	BK	1450	Ground	I	—
3	—	—	—	Not Occupied	—	—
4	0.35	GY / YE	7543	Hazard Warning Indicator LED Dimming Signal	I	—

S30 Headlamp Switch



5095565

Connector Part Information

Harness Type: Instrument Panel Wiring Harness
OEM Connector: 31410-0125
Service Connector: 13525987
Description: 12-Way F 0.64 Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	13584547	J-35616-64B (L-BU)	J-38125-215A

S30 Headlamp Switch

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	WH / VT	103	Headlamp Switch On Signal	I	—
2	0.35	YE	6817	LED Backlight Dimming Control 1	I	—
3	0.35	GN / BN	306	Headlamp Switch Off Signal	I	—
4	—	—	—	Not Occupied	—	—
5	0.35	GN / GY	13	Headlamp Switch Park Lamp Signal	I	—
6	—	—	—	Not Occupied	—	—
7	0.35	BK / YE	5005	Instrument Panel Lamp Dimmer Switch Low Reference	I	—
8	0.5	BK	1250	Ground	I	—

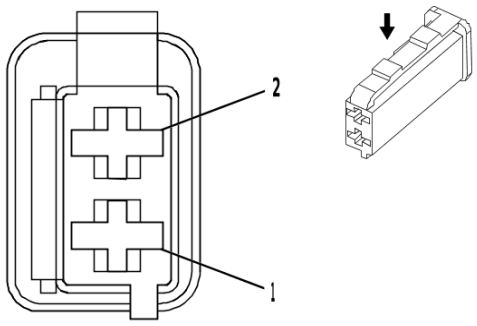
11	0.35	YE / GY	44	Instrument Panel Lamp Dimmer Switch Signal	I	—
12	0.35	BU / RD	1688	12V Reference	I	—

S33 Horn Switch



2339593

Connector Part Information

Harness Type: Steering Wheel
OEM Connector: 19179871
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way F 1.6 Timer Series(BK)

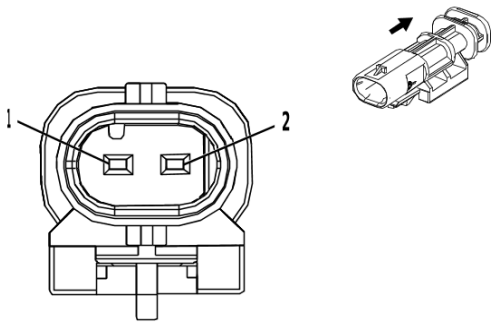
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-33 (YE)	No Tool Required

S33 Horn Switch

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	RD	3287	Horn Switch Signal	I	—
2	—	BK	1650	Ground	I	—

S46B Liftgate Unlatch Switch



2474755

Connector Part Information

Harness Type: License Lamp Wiring Harness
OEM Connector: 13591337
Service Connector: Service by Harness - See Part Catalog
Description: 2-Way M 1.2 MCON Series, Sealed(BK)

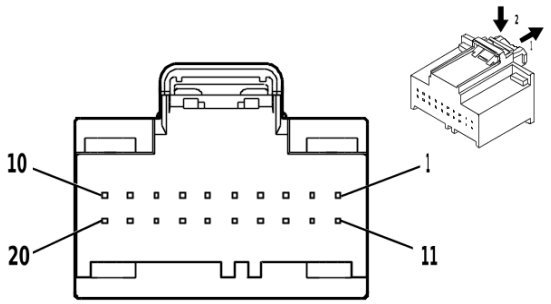
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-17 (L-GN)	No Tool Required

S46B Liftgate Unlatch Switch

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	YE / BU	5797	Rear Closure Handle Switch Open Signal	I	—
2	0.5	BK	1050	Ground	I	—

S48D Multifunction Switch 2 - Instrument Panel



5112891

Connector Part Information

Harness Type: Front Floor Console Wiring Harness
OEM Connector: 31410-0205
Service Connector: Service by Harness - See Part Catalog
Description: 20-Way F 0.64 Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

S48D Multifunction Switch 2 - Instrument Panel

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	GY / WH	3153	Lane Departure Warning Disable Switch Signal	I	(UHX/ UHY/ UEU)
2	0.35	BU / VT	1788	Traction Control Switch Signal 1	I	—
3	—	—	—	Not Occupied	—	—
4	0.35	GY	5054	Sport Mode Switch Signal	I	—
5	0.35	WH	6816	Indicator Dimming Control	I	(UHX/ UHY/ UEU)

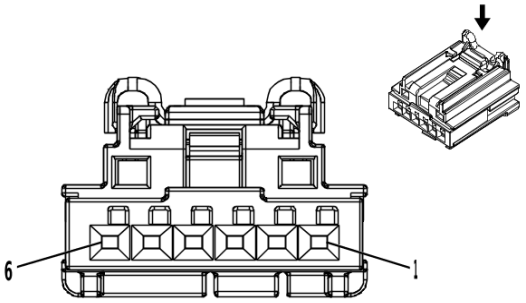
S51 Telematics Button Assembly (UE1)



3960313

Connector Part Information

Harness Type: Roof Wiring Harness
OEM Connector: 2035363-4
Service Connector: 19332786
Description: 6-Way F 0.64 Generation Y Series(BK)

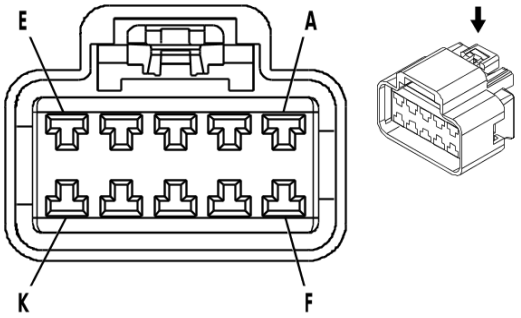
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

S51 Telematics Button Assembly (UE1)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.35	GN / BK	2515	Telematics Switch Supply Voltage	I	UE1
2	—	—	—	Not Occupied	—	—
3	0.35	GN / WH	2514	Telematics Switch Signal	I	UE1
4	0.35	YE / VT	2516	Telematics Switch Green LED Indicator Control	I	UE1
5	0.35	BN / WH	2517	Telematics Switch Red LED Indicator Control	I	UE1
6	0.5	BK	550	Ground	I	UE1

S64D Seat Adjuster Switch - Driver (A2X)



623046

Connector Part Information

Harness Type: Front Seat Wiring Harness - Driver
OEM Connector: 15326931
Service Connector: Service by Harness - See Part Catalog
Description: 10-Way F 280 GT Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-4A (PU)	No Tool Required

S64D Seat Adjuster Switch - Driver (A2X)

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
A	1.5	GN / BN	286	Driver Seat Front Vertical Motor Up Control	I	—
B	2.5	BK	1550	Ground	I	—

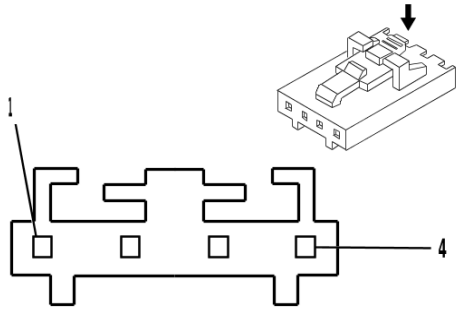
S70E Steering Wheel Controls Switch - Radio Presets



605502

Connector Part Information

Harness Type: Steering Wheel
OEM Connector: 50-57-9404
Service Connector: Service by Harness - See Part Catalog
Description: 4-Way F 0.64 SL Series(BK)

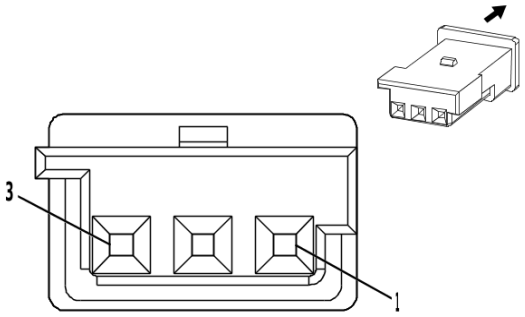
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

S70E Steering Wheel Controls Switch - Radio Presets

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	BK	1650	Ground	I	—
2	—	GN / OG	4313	Radio Favorite Forward Switch Signal	I	—
3	—	GY / OG	4312	Radio Favorite Back Switch Signal	I	—
4	—	—	—	Not Occupied	—	—

S70F Steering Wheel Controls Switch - Radio Volume



2179789

Connector Part Information

Harness Type: Steering Wheel
OEM Connector: 4-1718346-1
Service Connector: Service by Harness - See Part Catalog
Description: 3-Way F 0.64 Micro-Quadlock Series(PU)

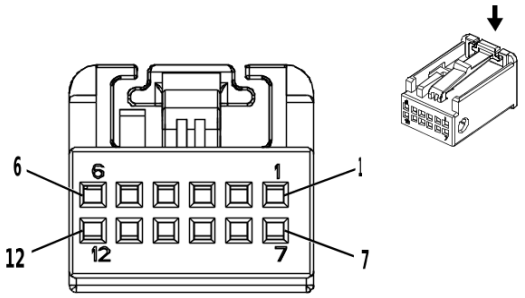
Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

S70F Steering Wheel Controls Switch - Radio Volume

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	BK / BU	4315	Radio Volume Up Switch Signal	I	—
2	—	BU / RD	4314	Radio Volume Down Switch Signal	I	—
3	—	BK	1650	Ground	I	—

S70L Steering Wheel Controls Switch - Left



3232386

Connector Part Information

Harness Type: Steering Wheel
OEM Connector: 1-1355524-3
Service Connector: Service by Harness - See Part Catalog
Description: 12-Way F 0.64 GET Series(BK with BK Case)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-64B (L-BU)	No Tool Required

S70L Steering Wheel Controls Switch - Left

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	—	BK	1650	Ground	I	—
2	—	GY / GN	5737	Distance Sensing Cruise Control Gap Up/Down Switch Signal	I	—
3	—	YE / BK	3893	Steering Wheel LED Backlight Dimming Control	I	—
4 - 5	—	—	—	Not Occupied	—	—

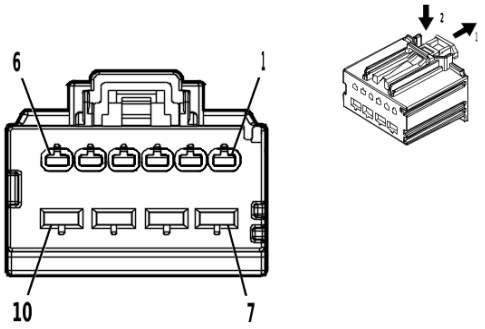
S79LR Window Switch - Left Rear



5035058

Connector Part Information

Harness Type: Rear Door Door Wiring Harness - Left Rear
OEM Connector: 31372-1600
Service Connector: Service by Harness - See Part Catalog
Description: 10-Way F 1.5, 2.8 MX Series(BK)

Terminal Part Information

Terminal Type ID	Terminated Lead	Diagnostic Test Probe	Terminal Removal Tool
I	Not required	J-35616-14 (GN)	No Tool Required
II	Not required	J-35616-4A (PU)	No Tool Required

S79LR Window Switch - Left Rear

Pin	Size	Color	Circuit	Function	Terminal Type ID	Option
1	0.5	GN / GY	6135	Body Control Module LIN Bus 4	I	—
2	0.35	GY	747	Left Rear Door Ajar Switch Signal	I	—

OEM Connector: Not Available
Service Connector: Service by Harness - See Part Catalog
Description: 12-Way F

Connector Part Information

Harness Type: Body Wiring Harness
OEM Connector: 15326854
Service Connector: 88986252
Description: 12-Way M 150 GT Series, Sealed(BK)

Terminal Part Information

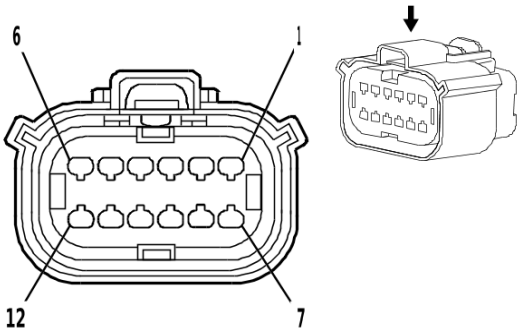
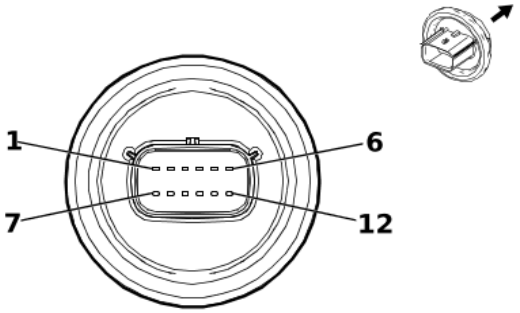
X120 Forward Lamp Wiring Harness to Front Headlamp



1825165



5879626

Connector Part Information

Harness Type: Forward Lamp Wiring Harness
OEM Connector: 33472-1206
Service Connector: 19352907
Description: 12-Way F 1.5 MX Series, Sealed(BK)

Connector Part Information

Harness Type: Front Headlamp
OEM Connector: 0-A1000063-2
Service Connector: Service by Harness - See Part Catalog
Description: 12-Way M 1.5 MX Series, Sealed(BK)

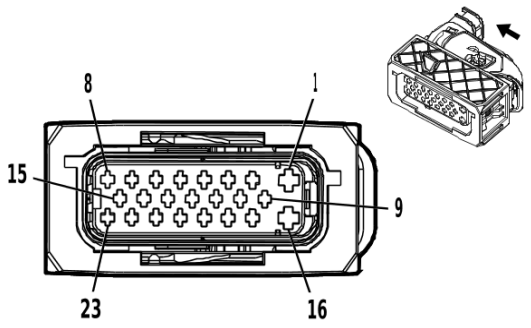
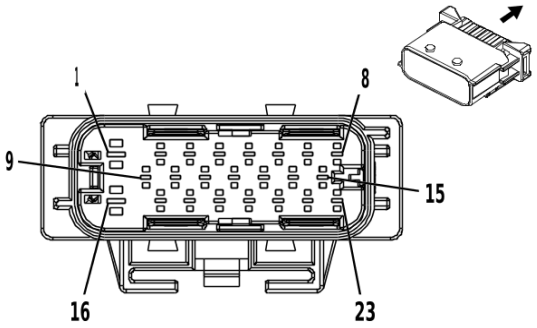
X310 Front Seat Wiring Harness - Driver to Body Wiring Harness



4538855



2906943

Connector Part Information

Harness Type: Front Seat Wiring Harness - Driver

OEM Connector: 13674806

Service Connector: Service by Harness - See Part Catalog

Description: 23-Way F 1.5 DSQ, 2.8 ATS Series, Sealed(BK)

Connector Part Information

Harness Type: Body Wiring Harness

OEM Connector: 13750010

Service Connector: 19332380

Description: 23-Way M 1.5 DSQ, 2.8 ATS Series, Sealed(BK)

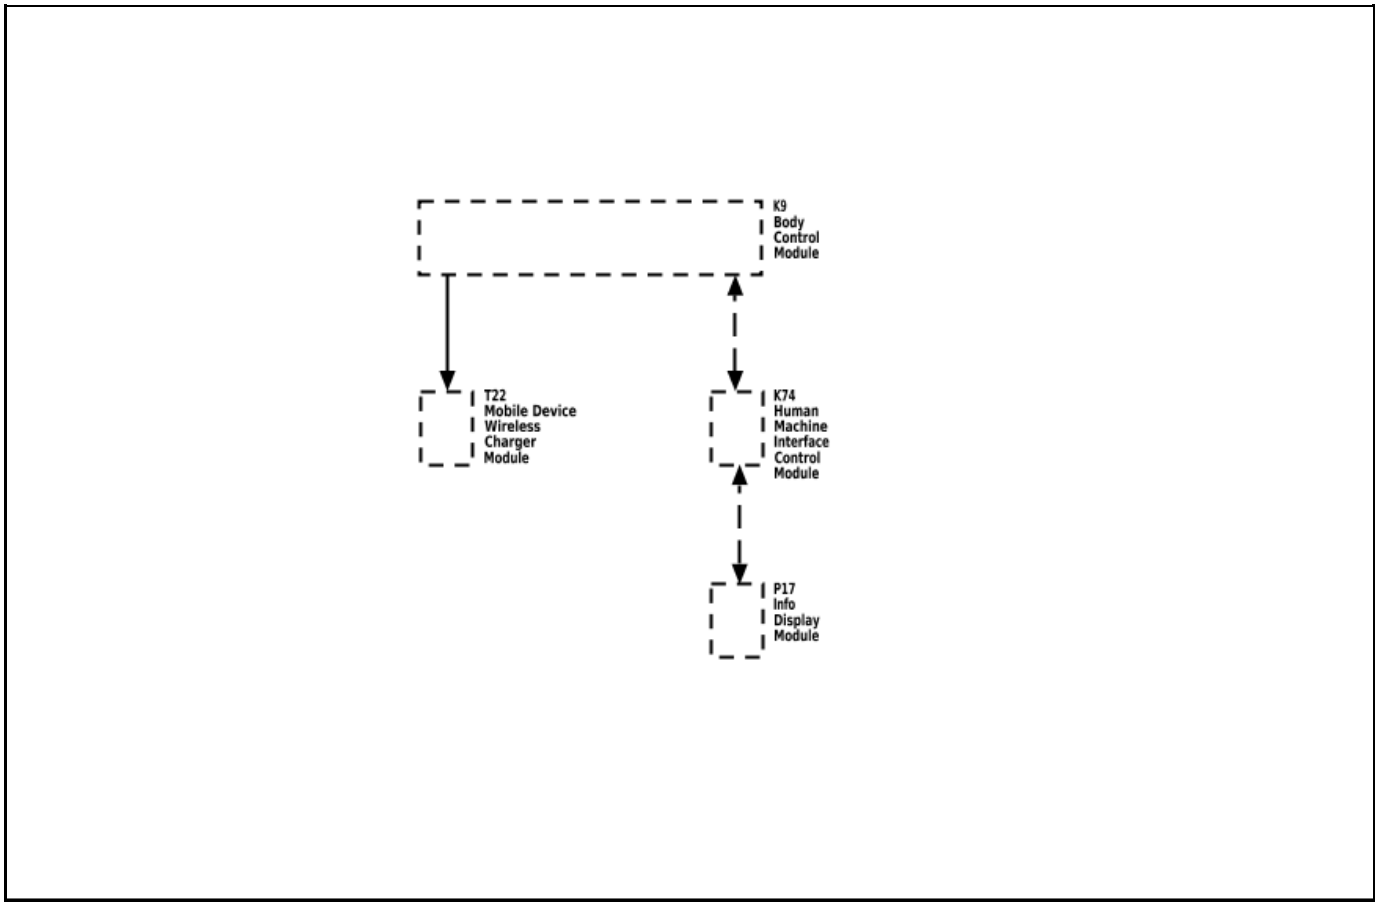
Description and Operation

Mobile Device Wireless Charger Description and Operation

Mobile Device Wireless Charging System

Mobile Device Wireless Charging System Block Diagram



3607745

The Mobile Device Wireless Charging System (WCS) is an system for wirelessly charging mobile devices. It is capable of charging the batteries of compatible mobile devices. A compatible device is one that is compliant with Power Matters Alliance (PMA) or Wireless Power Consortium (WPC) Standard, meaning that it is equipped with a PMA or WPC wireless charge “receiver” that will work with the charge “transmitter” installed in the vehicle. The devices may utilize built-in charging circuitry or an adapter (external plug-in device which contains the charging circuitry). To check for phone or other device compatibility, refer to GM Total Connect.

Warning: Remove all objects from the charging pad before charging your mobile device. Objects, such as coins, keys, rings, paper clips, or cards, between the phone and charging pad will become very hot. On the rare occasion that the charging system does not detect an object, and the object gets wedged between the phone and charger, remove the phone and allow the object to cool before removing it from the charging pad, to prevent burns.

Charging

To charge a device, place it on the charging surface in the vehicle. There is a charging coil located in the center of the charging surface. The device has a charging coil typically near the center of the device. These coils must be lined up in order for charging to proceed. When the interruptible retained accessory power (IRAP) relay is closed (this is true typically when vehicle ignition is in Run or Accessory position), the WCS will detect the device, establish communications with the device to confirm it is a compatible device, and then deliver charging power to the device via wireless interface. The WCS will be able to deliver up to 5W of power to compatible devices. It shall only enter a charging state if communication is established and a compatible device is identified.

The WCS shall not enter a charging state if there is no communication established with a compatible device. If a non-compatible device or metallic foreign object is detected, the WCS will not transfer power. The charger monitors its internal temperature and will shut down if the charger temperature exceeds 185F (85C).

Indicator

The body control module will detect the device battery is charging and send a serial data message on the GMLAN bus to the radio display. The radio display will indicate a device is currently charging. When the indicator is toggling on and off this indicates a thermal limit has been reached and the device will not charge. For more information refer to the owners manual.

Cooling

The wireless charger is kept cool using the HVAC system. There is a dedicated HVAC duct that connects to the Wireless Charging Module bracket (which holds the module and the mat).

Power Outlets Description and Operation

12 Volt Power Outlet Receptacle Description and Operation

The 12 V accessory power receptacles are supplied with power by the accessory relay.

The vehicle is fitted with a 12 V accessory power receptacle. The accessory power outlets are controlled by an ignition operated relay. The accessory power receptacle is operational when the ignition is turned to either the On or the Accessories positions. The The X80C Accessory Power Receptacle-Cargo is controlled by B+ and is operational all the time.

220 Volt Power Outlet Receptacle System Description

The alternating current (AC) accessory power outlet system consists of the accessory DC/AC power inverter module and the accessory power receptacle – 220 V AC. The accessory DC/AC power inverter module converts 12 V direct current (DC) battery power to 220 V at 60 Hertz (Hz) AC power to operate AC powered devices. The accessory DC/AC power inverter module provides up to 150 watts of power. The accessory power receptacle – 220 V AC provides the usual connection for AC powered devices.

220 Volt Power Outlet Receptacle System Operation

The accessory DC/AC power inverter module receives fuse protected battery voltage and is connected to the 12 V electrical system ground. The accessory power receptacle – 220 V AC has an internal switch, that detects when an AC powered device is plugged into the outlet. When the ignition is ON, and an AC powered device is plugged into the accessory power receptacle – 220 V AC, the normally open switch in the accessory power receptacle – 220 V AC, closes. When the accessory DC/AC power inverter module detects the voltage from the accessory power receptacle – 220 V AC switch, the inverter module begins to supply 220 V AC to the accessory power receptacle – 220 V AC after a 1.5 s delay. The accessory AC power system is protected against circuit overload and circuit shorts to ground.

220 Volt Power Outlet Receptacle Isolation Fault Protection

The accessory DC/AC power inverter module contains a ground fault circuit interrupter (GFCI). GFCI monitors the 220 V circuit for a short to vehicle chassis ground. If a 220 V AC short to ground is detected, the accessory DC/AC power inverter module will turn OFF. The module remains OFF, until the AC powered device is unplugged from the outlet, and then plugged into the outlet after a 3 s delay.

220 Volt Power Outlet Receptacle Overload Shutdown

The accessory DC/AC power inverter module will turn OFF if the current in the 220 V circuit is greater than 3.8 A for 1 s , or 2.5 A for 10 s . The module will turn ON again, when the AC powered device is unplugged from the outlet, and then plugged into the outlet after a 3 s delay.

220 Volt Power Outlet Receptacle Internal Shutdown

The accessory DC/AC power inverter module will turn OFF if the B+ supply voltage is greater than 16.5 V or less than 11 V. The module will also turn OFF if the device temperature is greater than 85°C (185°F). The module will turn ON again, after the shutdown condition is corrected, and the AC powered device is unplugged from the outlet, and then plugged into the outlet.

USB Receptacle Description and Operation (USS)

The vehicle is fitted with USB charge port receptacles at the rear of the floor console. These USB receptacles are for charging devices only. The USB receptacles are controlled by an ignition operated relay and are operational when the ignition is turned to either the On or the Accessories positions.

B5LR	Wheel Speed Sensor - Left Rear	—	Near the left rear wheel, inside the hub	Wheel Well Components - Rear	B5LR Wheel Speed Sensor - Left Rear
B5RF	Wheel Speed Sensor - Right Front	—	Near the right front wheel, to the rear of the knuckle	Wheel Well Components - Front	B5RF Wheel Speed Sensor - Right Front
B5RR	Wheel Speed Sensor - Right Rear	—	Near the right rear wheel, inside the hub	Wheel Well Components - Rear	B5RR Wheel Speed Sensor - Right Rear
B7B	Air Temperature Sensor - Duct Lower	—	In the passenger compartment, behind the instrument panel, attached to the left lower HVAC duct	—	B7B Air Temperature Sensor - Duct Lower
B7F	Air Temperature Sensor - Duct Upper	—	In the passenger compartment, behind the instrument panel, attached to the left upper HVAC duct	HVAC Assembly Components	B7F Air Temperature Sensor - Duct Upper
B9	Ambient Air Temperature Sensor	—	On the front of the vehicle, to the right of the A/C condenser, mounted in the grill	Front Fascia Components	B9 Ambient Air Temperature Sensor
B13	Transmission Fluid Temperature Sensor	—	In the engine compartment, internal to the automatic transmission assembly on the left side	Transmission Components	—
B15	Transmission Internal Mode Switch	—	In the engine compartment, internal to the automatic transmission assembly on the right side	Transmission Components	—
B18	Battery Current Sensor	—	In the engine compartment, left front, forward of battery, mounted to battery negative cable	Left Side Engine Compartment	B18 Battery Current Sensor
B20	Brake Fluid Level Switch	—	In the left rear of the engine compartment, at the bottom of the brake fluid reservoir	Left Side Engine Compartment	B20 Brake Fluid Level Switch
B22	Brake Pedal Position Sensor	—	In the passenger compartment, left front, left of accelerator pedal, mounted to bracket on lower bulkhead	Left Front of Passenger Compartment Components	B22 Brake Pedal Position Sensor
B24LF	Mobile Telephone Microphone - Left Front	—	In the pasenger compartment, left side of overhead console assembly	—	B24LF Mobile Telephone Microphone - Left Front
B24RF	Mobile Telephone Microphone - Right Front	—	In the pasenger compartment, right side of overhead console assembly	—	B24RF Mobile Telephone Microphone - Right Front
B27D	Door Handle Switch - Driver Exterior	—	On outside of driver door, at rear, part of door handle assembly	Driver Door Components	—
B27P	Door Handle Switch - Passenger Exterior	—	On outside of passenger door, at rear, part of door handle assembly	Passenger Door Components	—
B30	Hybrid/EV Battery Pack Current Sensor	—	Internal component to hybrid/EV battery pack	—	—
B32A	Hybrid/EV Battery Temperature Sensor 1	—	Under the vehicle, in the Hybrid/EV Battery part of Hybrid/EV Battery Module 1	—	—

Master Electrical Component List (cont'd)

Code	Name	Option	Location	Locator View	Connector End View
B32B	Hybrid/EV Battery Temperature Sensor 2	—	Under the vehicle, in the Hybrid/EV Battery part of Hybrid/EV Battery Module 2	—	—
B32C	Hybrid/EV Battery Temperature Sensor 3	—	Under the vehicle, in the Hybrid/EV Battery part of Hybrid/EV Battery Module 3	—	—
B32D	Hybrid/EV Battery Temperature Sensor 4	—	Under the vehicle, in the Hybrid/EV Battery part of Hybrid/EV Battery Module 4	—	—
B32E	Hybrid/EV Battery Temperature Sensor 5	—	Under the vehicle, in the Hybrid/EV battery part of Hybrid/EV battery module 5	—	—
B32F	Hybrid/EV Battery Temperature Sensor 6	—	Under the vehicle, in the Hybrid/EV battery part of Hybrid/EV battery module 6	—	—
B55	Engine Hood Switch	—	In the engine compartment, to the left of the hood latch	*Front of Engine Compartment (1 of 2)*	*B55 Engine Hood Switch*
B59L	Front Impact Sensor - Left	—	In the engine compartment, left of the hood latch	—	*B59L Front Impact Sensor - Left*
B59R	Front Impact Sensor - Right	—	In the engine compartment, right of the hood latch	—	*B59R Front Impact Sensor - Right*
B61P	Seat Belt Tension Sensor - Passenger	—	Part of passenger seat belt buckle	*Right Front of Passenger Compartment Components*	*B61P Seat Belt Tension Sensor - Passenger*
B63LF	Side Impact Sensor - Left Front	—	In the driver door, near middle, mounted to door beam	*Driver Door Components*	*B63LF Side Impact Sensor - Left Front*
B63LR	Side Impact Sensor - Left Rear	—	In the passenger compartment, left rear, near outboard seat belt anchor bolt	*Left Rear of Passenger Compartment Components*	*B63LR Side Impact Sensor - Left Rear*
B63RF	Side Impact Sensor - Right Front	—	In the passenger door, near middle, mounted to door beam	*Passenger Door Components*	*B63RF Side Impact Sensor - Right Front*
B63RR	Side Impact Sensor - Right Rear	—	In the passenger compartment, right rear, near outboard seat belt anchor bolt	*Right Rear of Passenger Compartment Components*	*B63RR Side Impact Sensor - Right Rear*
B87	Rearview Camera	—	At the rear of vehicle, mounted to liftgate above license plate, left of center	*Liftgate Components (3 of 3)*	• *B87 Rearview Camera (UV2)* • *B87 Rearview Camera (UVB)*
B88D	Seat Belt Switch - Driver	—	In the passenger compartment, in the driver seat belt buckle	*Driver Seat Components (3 of 4)*	*B88D Seat Belt Switch - Driver*
B88P	Seat Belt Switch - Passenger	—	In the passenger compartment, in the passenger seat belt buckle	*Passenger Seat Components*	*B88P Seat Belt Switch - Passenger*
B107	Accelerator Pedal Position Sensor	—	In the passenger compartment, under the instrument panel near the accelerator pedal	—	*B107 Accelerator Pedal Position Sensor*
B118	Windshield Washer Fluid Level Sensor	—	In the front of vehicle, behind front fascia in the right front corner, in the washer fluid reservoir	—	*B118 Windshield Washer Fluid Level Sensor*

Description and Operation

Electronic Park Lock Description and Operation

If the vehicle is equipped with automatic transmission and a floor mounted console gear shift, it has an electronic park lock system. The electronic park lock system purpose is to prevent the ignition from being switched to the Vehicle OFF position when the transmission is in any position other than PARK and the vehicle may still be moving. The electronic park lock system incorporates the park position switch that located in the A/T shift lock control switch. When the transmission shift selector is in PARK, the park position switch closes and the BCM allows the ignition to be turned Vehicle OFF.

If the vehicle is not in PARK, the ignition will return to ACC/ACCESSORY and display the message SHIFT TO PARK in the Driver Information Center. When the vehicle is shifted into PARK, the ignition system will switch to Vehicle OFF.

Power Mode Description and Operation

Serial Data Power Mode Master

Power to many of this vehicles circuits is controlled by the module that is designated the power mode master. This vehicles power mode master is the body control module (BCM). The BCM has multiple B+ circuits that feed into it. Each of those circuits are partitioned within the controller to drive certain outputs of the vehicle's body functions. An open or short in any one of the B+ circuits may induce multiple codes/or a section of non-functionality within the BCM with the rest of the BCM functioning normally. In this case it is useful to refer to the power distribution schematics to determine if the non-functional partition of the controller shares a common B+ circuit. The power button switch is a low current push button switch with discrete power button switch signals to the power mode master for determination of the power mode that will be sent over the serial data circuits to the other modules that need this information. The power mode master will also activate relays and other direct outputs of the power mode master as needed. The power mode master determines which power mode (Vehicle Off, Vehicle On, Vehicle in Service Mode) is required, and reports this information to other modules via serial data. Modules which have switched voltage inputs may operate in a default mode if the power mode serial data message does not match what the individual module can see from its own connections.

The power mode master receives power button switch signals and transmitter in range signals to identify the operators desired power mode. The Power Mode Parameters table below illustrates the correct state of these input parameters (circuits) in correspondence to the power button switch position and the transmitter to vehicle range:

Power Mode Parameters

Power Mode	Power Mode Transmitted	Push Button Ignition Switch (Power Button Switch Circuit Input to the BCM)	Push Button Ignition Switch Voltage Push Button Ignition Switch Voltage Input to the BCM	Key in Cylinder Switch/Key Fob in Vehicle (Transmitter in Range to the BCM Signal)
Transmitter in Range	Vehicle Off	Inactive	9 V	Yes
Transmitter out of Range	Vehicle Off	Inactive	9 V	No
Vehicle On Power Mode, then Press the Power Button Switch (Foot on or off the Brake Pedal); Transmitter in Vehicle	Vehicle Off	Active (pushed) / Inactive (not pushed)	6 V (pressed)	Yes
Vehicle Off Power Mode, then Press the Power Button Switch with foot on the Brake Pedal; Transmitter in Vehicle	Vehicle On	Active (pushed) / Inactive (not pushed)	6 V (pressed)	Yes
Vehicle Off Power Mode, then Press and Hold the Power Button Switch for 5 s with foot off the Brake Pedal; Transmitter in Vehicle	Vehicle in Service Mode	Active (pushed) / Inactive (not pushed)	6 V (pressed)	Yes
Vehicle Off Power Mode, then Press and Hold the Power Button Switch for over 10 s with foot off the Brake Pedal; Transmitter in Vehicle	Vehicle in Service Mode	Active (pushed) / Inactive (not pushed)	6 V (pressed)	Yes

Relay Controlled Power Mode

The BCM uses the discrete power button switch inputs, transmitter in range status, current power mode state, and the brake pedal position state to distinguish the correct power mode (Vehicle Off, Vehicle On, and Vehicle in Service Mode). The BCM, after determining the desired power mode, will activate the appropriate relays for that power mode and send the power mode message out to other modules in a serial data message.

The retained accessory power relay remains on for a timed period after the power mode transitions to Vehicle Off. Refer to *Retained Accessory Power Description and Operation on page 6-613* for more information on the retained accessory power function.

Push Button Vehicle On/Off Switch

The vehicle has an electronic push button vehicle On/Off switch . The power button switch is equipped with two LED’s, one for backlighting and one for Vehicle On indication or Vehicle In Service Mode indication. The power button switch light flashes when the driver door is open and the vehicle is not on. The flashing light will eventually time out. The power button switch light is on steady when in Vehicle On or Vehicle In Service Mode. When the vehicle is turned off, the power button switch light will turn off.

Vehicle On

This position is for driving. The Vehicle On mode will be used for service (including maintenance and lubrication) and diagnostics on the electronic propulsion system. With the vehicle off, transmitter in the vehicle and the brake pedal applied, pressing the power button switch once will place the vehicle in Vehicle On mode. The instrument cluster displays an battery gauge, along with an audio startup cue. When the vehicle is ready to be driven the green Vehicle Ready Light will be illuminated. This could take up to 15 s at extremely cold temperatures. The electric propulsion system is active in this power mode. The vehicle cannot be charged in this power mode but the 12 volt system is charging. If the vehicle is left in PARK while in Vehicle On mode and the transmitter is removed from the vehicle, the vehicle will automatically turn off after 1.5 hours. If the vehicle is left in PARK while in Vehicle On mode and the transmitter is in the vehicle, the vehicle will automatically turn OFF after 3 hours. The timer will stop when the vehicle is shifted out of PARK and the timer will reset after the vehicle is placed back in PARK while in Vehicle On mode.

Vehicle In Service Mode

Note: The vehicle will not charge if the charging cable is attached to the vehicle after being placed into the Vehicle In Service Mode. Attach the charging cable to the vehicle before entering the Vehicle In Service Mode to charge the vehicle.

This power mode is available for service and diagnostics, and to verify the proper operation of the MIL as may be required for emission inspection purposes. The Vehicle In Service Mode will be used for service and diagnostics for items not requiring the electronic propulsion to be active. With the vehicle off, and the brake pedal not applied, pressing and holding the power button switch for 5 s will place the vehicle in Vehicle In Service Mode for approximately 3 hours. After being in Vehicle In Service Mode for 1.5 hours, the vehicle will look to see if the transmitter in still present. If the transmitter is not present in the vehicle, it will power down instead of staying powered up for the full 3 hours. Pressing and holding the power button switch for at least 10 s will place the vehicle in Vehicle In Service Mode until the vehicle is manually turned OFF. The instruments and audio systems will operate as they do in Vehicle On mode, but the vehicle will not be able to be driven. The electric propulsion system is inactive in this power mode. The vehicle can only be charged in this power mode if the charging cable is attached before this power mode is enabled.

Vehicle Off

To turn the vehicle off, push the power button switch with the vehicle in P (Park). Retained Accessory Power (RAP) will remain active until the driver door is opened. Refer to *Retained Accessory Power Description and Operation on page 6-613* for more information on the retained accessory power function. When turning off the vehicle, if the vehicle is not in P (Park), the SHIFT TO PARK message is displayed in the Driver Information Center (DIC). The electric propulsion system is inactive in this power mode. The vehicle can be charged while in this power mode.

Transport Mode (If Equipped)

Transport Mode reduces the parasitic load of some modules during vehicle shipping and/or during vehicle storage. This improves the drain time on the battery (up to 70 days without the battery going dead). When the vehicle is in transport/storage, some features may be disabled or have reduced functionality while in Transport mode, such as disabling the Remote Function Actuator or content theft features.

Transport Mode utilizes a latching relay that when enabled it disconnects some modules from their ignition power or memory power sources. Transport Mode is initiated by turning on the hazard flashers, applying the brake pedal, and then turning and pressing and holding the ignition mode switch for greater than 15 S. The mode is disengaged by repeating the previous process causing the relay to latch in the other direction. This feature can be used as many times as necessary if the vehicle is to be stored for an extended period of time. The driver information center (if equipped) will temporarily display Transport Mode is On when it enables and Transport Mode is OFF when it disables. For vehicles not equipped with a driver information center, the battery indicator light will constantly flash on the Instrument Cluster when enabled. This feature can be used as many times as necessary if the vehicle is to be stored for an extended period of time.

BCM Awake/Sleep States

The BCM is able to control or perform all of the BCM functions in the awake state. The BCM enters the sleep state when active control or normal monitoring of system functions has stopped and a time limit has passed. The BCM must detect certain wake-up inputs before entering the awake state. The BCM monitors for these inputs during the sleep state.

The BCM will enter the awake state if any of the following wake-up inputs are detected:

- Activity on the serial data line (including wake-up circuits)
- Detection of a battery reconnect
- Any door open signal
- Headlamps ON
- Vehicle On
- Vehicle In Service Mode
- Park lamps ON
- Keyless entry or remote start message

The BCM will enter a sleep state when all of the following conditions exist:

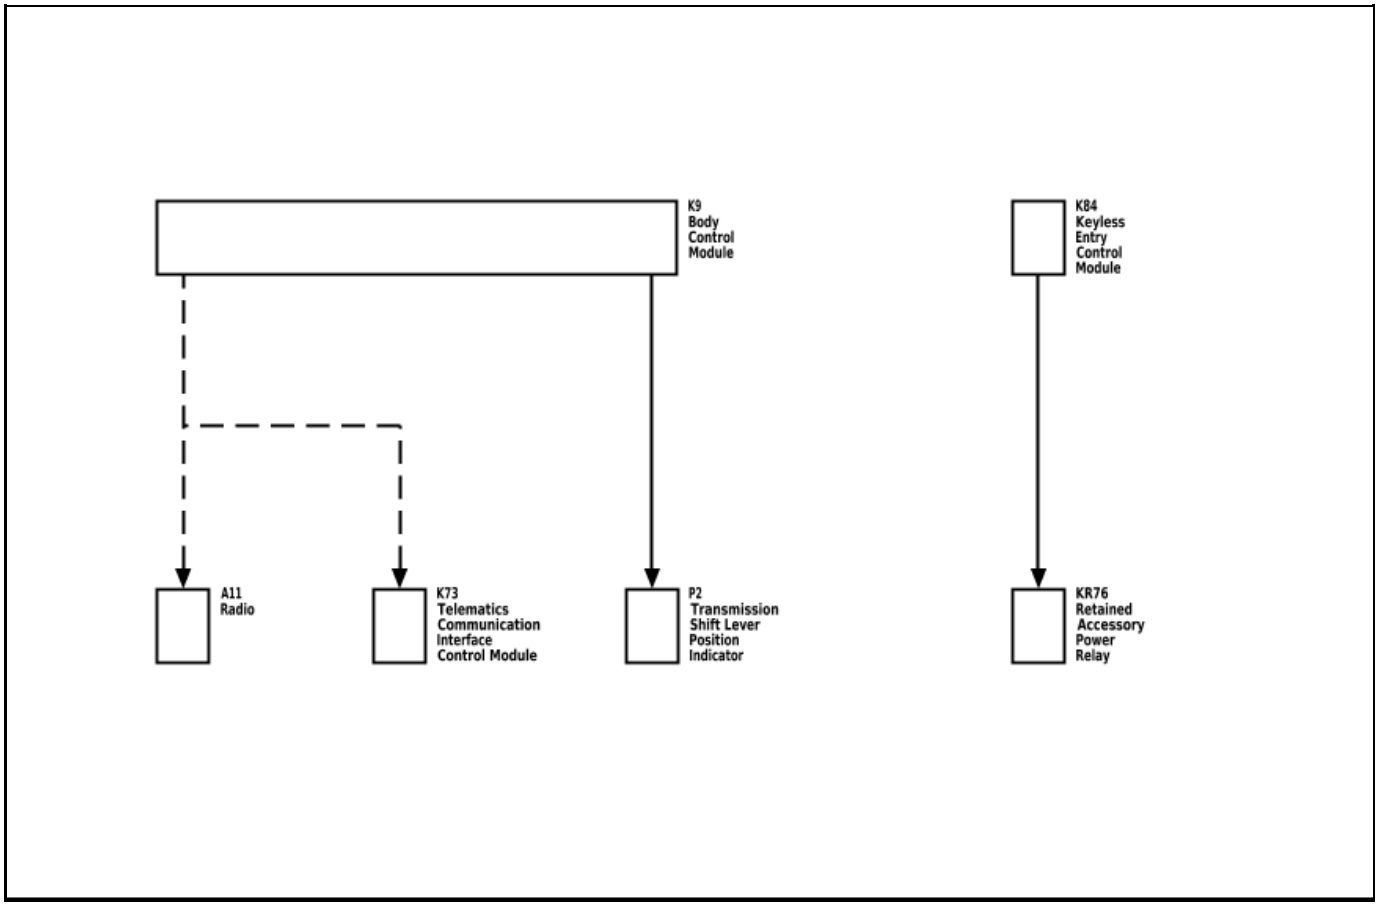
- Vehicle Off, transmitter is out of range
- No activity exists on the serial data line (including wake-up circuits)
- No outputs are commanded.
- No delay timers are actively counting.
- No wake-up inputs are present.

If all these conditions are met, the BCM will enter a low power or sleep condition.

Serial Data Wake-Up

Control modules on the serial data wake-up circuit enable or disable communication based on the voltage level of this circuit.

Retained Accessory Power Description and Operation



4179264

Retained Accessory Power

The body control module (BCM) monitors the vehicle power modes, battery condition, and each door ajar/ open switch status to determine whether the retained accessory power should be initiated or terminated. Retained accessory power is controlled by two different methods; relay control and serial data. Some modules receive a retained accessory power message from the BCM over the serial data circuits. Serial data controlled retained accessory power is deactivated as required by their modules retained accessory power mode operation. Other subsystems are activated directly. Components and systems that are active in retained accessory power are also activated anytime the vehicle power mode is any state other than Vehicle OFF regardless of the door switch signals.

Interruptible Retained Accessory Power Relay Controlled Retained Accessory Power

The Keyless entry control module keeps the relay energized during all power modes, except Vehicle Off. The relay is also energized for approximately 10 minutes after moving to the Vehicle OFF state and moving the transmitter out of range, providing no door is opened. The keyless entry control module controls components in the same manner as BCM direct controlled retained accessory power with one exception; interruptible retained accessory power is deactivated during transmitter authentication. The keyless entry control module will deactivate components that may cause radio frequency (RF) interference when the vehicle On/Off switch is pressed which may result in “NO REMOTE DETECTED” displayed on the driver information center.

Relay controlled retained accessory power will end when one of the following conditions is met:

- The keyless entry control module receives a message that any door ajar or open switch indicating the opening of any door after entering the Vehicle Off state and the transmitter is out of range.

  Note: If the keyless entry control module is receiving any door ajar or open signal from those switches when the Vehicle Off state is entered and the transmitter is out of range, retained accessory power will not initiate.

- The keyless entry control module detects a decrease in battery capacity below a prescribed limit.

Systems powered by the retained accessory power relay during the retained accessory power mode are as follows:

- Accessory Power Receptacle
- Cigarette Lighter Receptacle

Serial Data Controlled Retained Accessory Power

Retained accessory power systems controlled by serial data are as follows:

Radio

Radio retained accessory power activation / termination is the same as relay operation with one exception; the only door switch that will turn off the radio during retained accessory power is the driver door open switch.

Vehicle Communication Interface Module (VCIM) (Onstar®) (If Equipped)

VCIM RAP activation/termination is the same as radio operation with 1 exception; if there is an active call when the ignition key is turned off the VCIM will remain in RAP mode, and keep the radio in RAP mode until the call is terminated.

Section 7

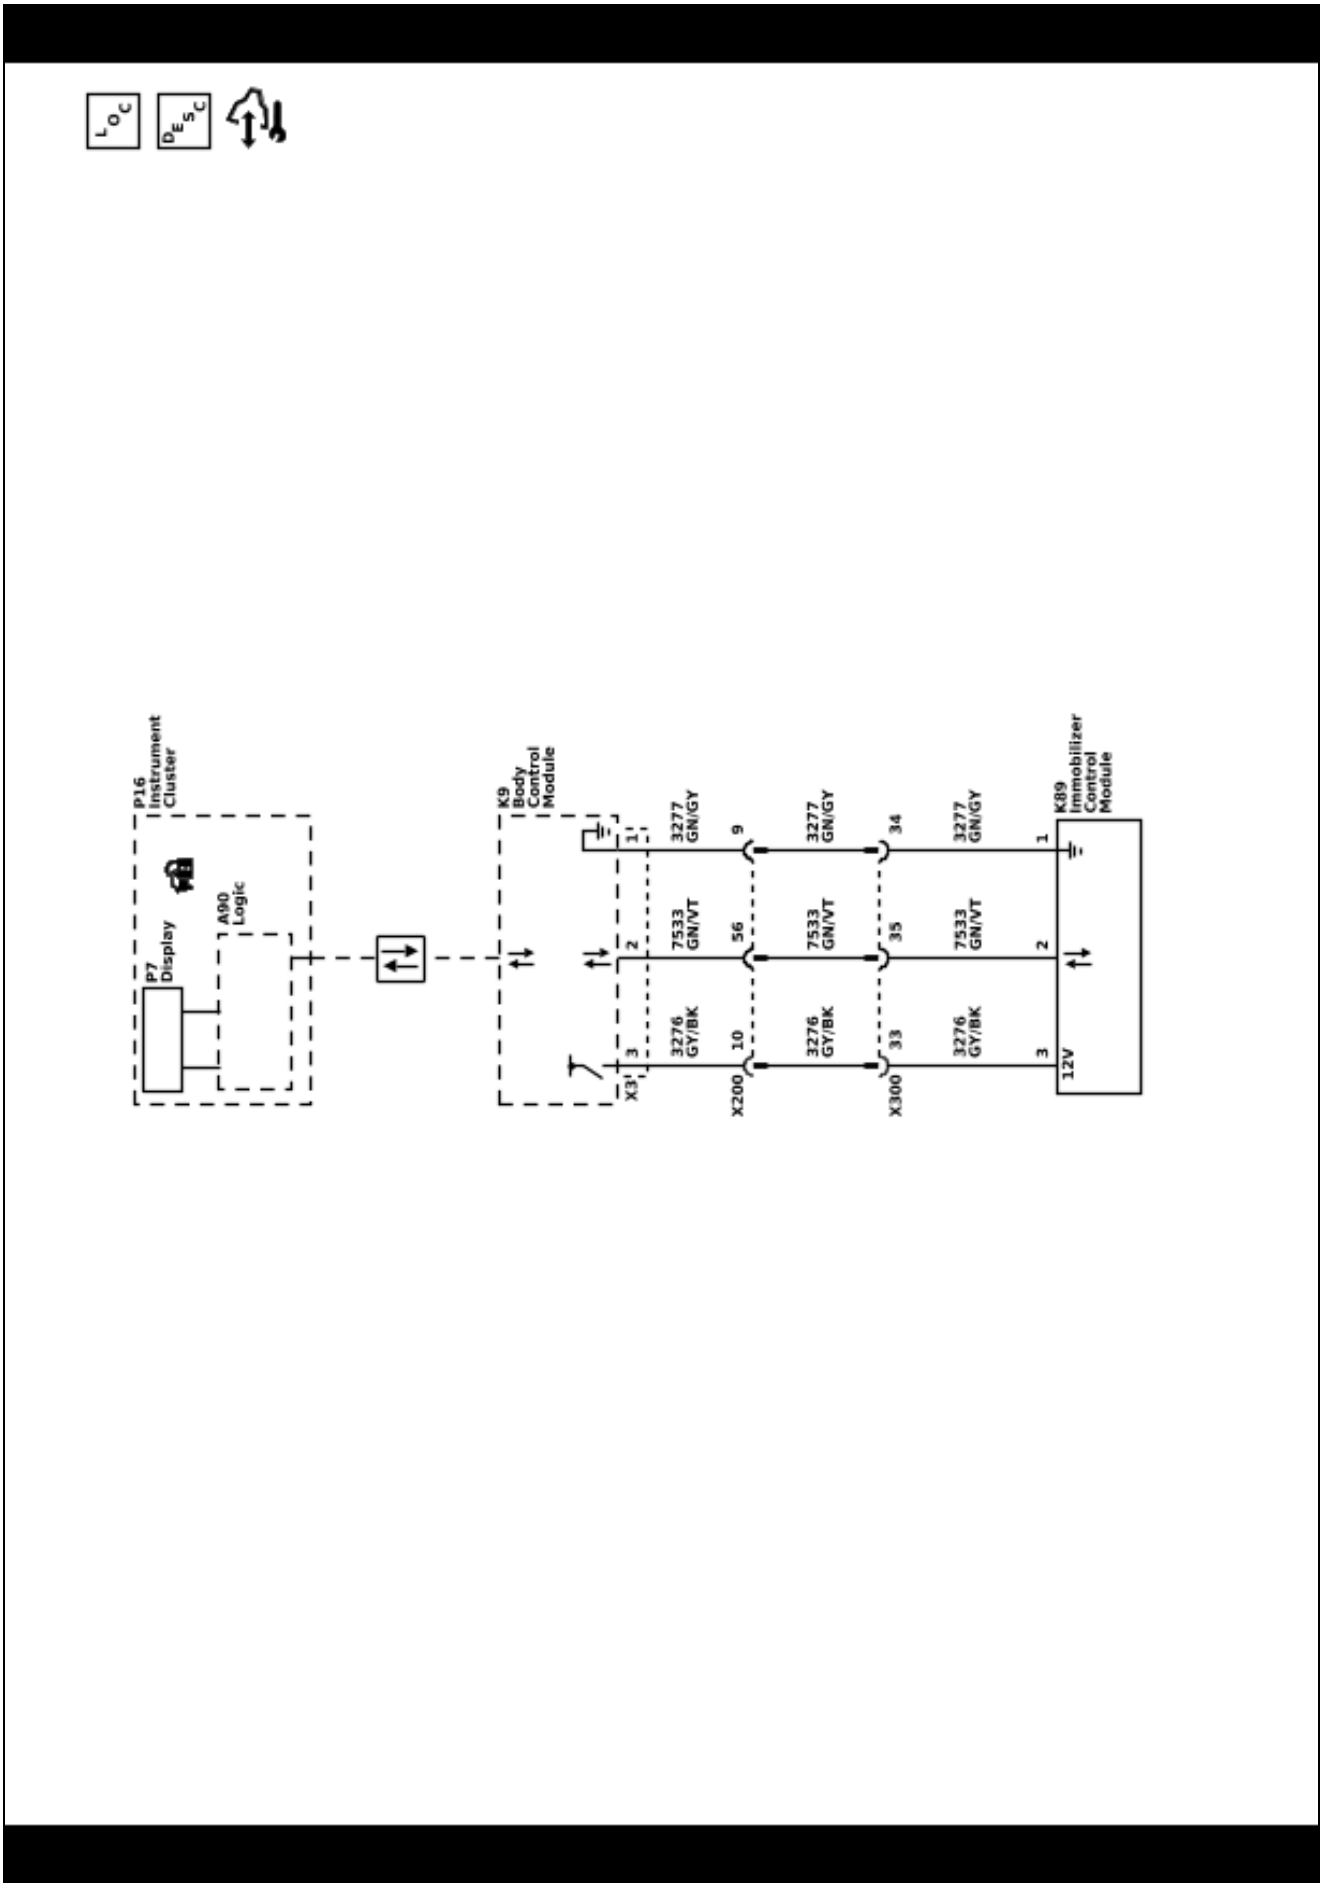
Safety and Security

BLANK

Immobilizer

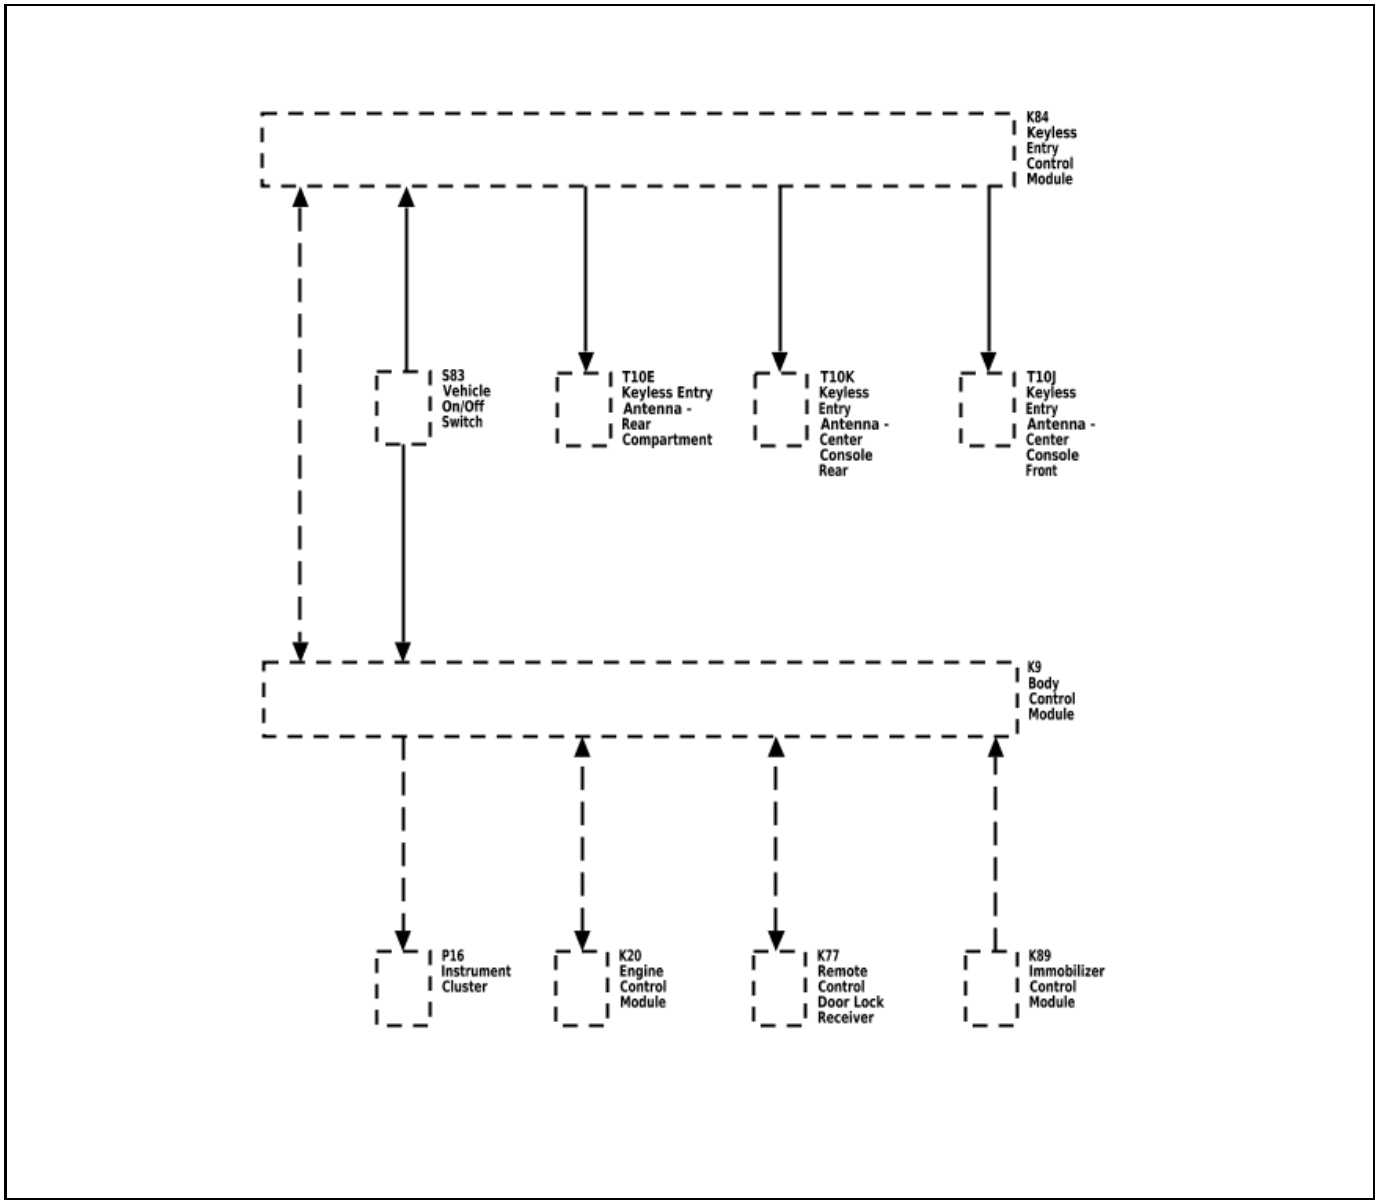
Schematic and Routing Diagrams

Immobilizer Schematics (Immobilizer)



Description and Operation

Immobilizer Description and Operation



3535456

The immobilizer system functions are provided by the keyless entry control module, remote control door lock receiver, body control module (BCM), hybrid/EV powertrain control module 1, and engine control module (ECM), as well as any modules which store and report the environment identifier. The keyless start system use low frequency antennas in three different locations on the vehicle to determine the location of the transmitter. Multiple antenna are used to ensure complete coverage of the vehicle interior and rear compartment.

When the vehicle ON/OFF switch is pressed, the low frequency antennas emit a challenge to the keyless entry transmitter. The transmitter receives this challenge and emits it's response as an RF message. The transmitter transmits a signal that contains its unique value, which is received by the BCM through the remote control door lock receiver. The BCM then compares this value to a value stored in memory. The BCM also monitors various modules to determine if the stored environment identifiers match.

If both the environment identifier and the value received from the transponder match, the BCM will send the prerelease password via serial data to the hybrid/EV powertrain control module 1. If the encrypted code's unique value is incorrect or the environment identifier does not match, the BCM will send the fuel disable message to the hybrid/EV powertrain control module 1.

When the hybrid/EV powertrain control module 1 receives the BCM prerelease password, the hybrid/EV powertrain control module 1 will challenge the password. The hybrid/EV powertrain control module 1 sends this challenge to the BCM via serial data. Both the hybrid/EV powertrain control module 1 and BCM perform a calculation on this challenge. Additionally, the

ECM will also monitor this challenge and calculate it's own response. If the BCM calculated response to the challenge equals the calculation performed by the hybrid/EV powertrain control module 1 and ECM, the hybrid/EV powertrain control module 1 and ECM will allow vehicle propulsion.

If RF communication is interrupted, a "No Remote Detected" message will be displayed on the DIC. In these cases, the extended transmitter key blade can be placed in the transmitter slot located in the upper instrument panel storage compartment, under the rubber mat. The immobilizer antenna coil is located directly beneath the transmitter slot. Placing the transmitter in the pocket will create a low powered coupling between the transmitter and immobilizer antenna, allowing communications to occur and enabling vehicle starting.

The components of the theft system are as follows:

- BCM
- Hybrid/EV powertrain control module 1
- ECM
- Immobilizer antenna
- Ignition key or keyless entry transmitter
- Security indicator
- Various modules which store and report the environment identifier

Body Control Module (BCM)

The immobilizer system is an integral part of the BCM and is controlled internally within the BCM. The BCM can learn up to 8 keys (transponder values).

The BCM uses the following inputs:

- Environment identifier exchange with various modules
- Encrypted code from the vehicle key, received by the immobilizer antenna

The BCM uses the following outputs:

- Prerelease password communication with ECM
- Challenge/response with ECM

When the vehicle ON/OFF switch is pressed, the low frequency antennas emit a challenge to the keyless entry transmitter. The transmitter receives this challenge and emits it's response as an RF message. The transmitter transmits a signal that contains its unique value, which is received by the BCM through the remote control door lock receiver. The BCM then compares this value to a value stored in memory. The BCM then performs one of the following functions:

- If the encrypted code value matches the values stored in the BCM memory, the BCM will send the prerelease password to the ECM via serial data.
- If the encrypted code unique value does not match the value stored in the BCM, the BCM will send the start disable message to the ECM via serial data.
- If the BCM is unable to measure the ignition key encrypted code value, the BCM will not send any messages to the ECM.

Hybrid/EV Powertrain Control Module 1

When the hybrid/EV powertrain control module 1 receives the BCM prerelease password, the hybrid/EV powertrain control module 1 will challenge the password. The hybrid/EV powertrain control module 1 sends this challenge to the BCM via the serial data circuit. Both the hybrid/EV powertrain control module 1 and BCM perform a calculation on this challenge. If the calculated response from the BCM equals the calculation performed by the hybrid/EV powertrain control module 1, the hybrid/EV powertrain control module 1 will allow vehicle propulsion.

The hybrid/EV powertrain control module 1 will disable vehicle propulsion if any of the following immobilization conditions occur:

- The prerelease password is invalid.
- The start disable password is sent by the BCM.
- No passwords are received. There is no communication with the BCM.
- The BCM calculated response to the challenge does not equal the calculation performed by the hybrid/EV powertrain control module 1.

Engine Control Module (ECM)

The ECM functions in the immobilizer system as a type of slave device. It does not general the password challenge, but it does monitor the challenge and response messages between the BCM and hybrid/EV powertrain control module 1. The ECM will calculate it's own result to the challenge. If the ECM response does not equal the BCM response, the ECM may also disable vehicle propulsion. To allow vehicle propulsion, the response from the BCM, ECM, and hybrid/EV powertrain control module 1 must all match.

The ECM will disable vehicle propulsion if any of the following immobilization conditions occur:

- The start disable password is sent by the BCM.
- No passwords are received. There is no communication with the BCM or hybrid/EV powertrain control module 1.
- The BCM calculated response to the challenge does not equal the calculation performed by the ECM.

Immobilizer Antenna

The immobilizer antenna contains an immobilizer coil. The coil passively powers the transponder located in the ignition key when the key is in the transmitter slot. When powered, the key transmits its unique value to the immobilizer antenna, which is then relayed to the BCM via a LIN serial data circuit. The immobilizer antenna also receives B+ and ground from the BCM.

The immobilizer antenna is used to:

1. Learn keys
2. To start vehicle with or without RF interference
3. To start vehicle when key battery is dead

Keyless Entry Transmitter

Each keyless entry transmitter contains a transponder with a unique encrypted value. The transponder's encrypted value is fixed and unable to be changed. The

immobilizer system uses the transponder value to determine if a valid transmitter is being used to start the vehicle.

Environment Identifier

Various modules throughout the vehicle learn a specific environment identifier during the module programming process. The environment identifier is learned by each individual module and matches the environment identifier stored in the BCM. Prior to starting after a battery disconnect, each of the modules which store a environment identifier will compare their identifier to that of the identifier stored in the BCM. If all the identifiers match, the engine starting process will continue. If the environment identifiers do not match, engine starting will be disabled.

Security Indicator

The BCM will command the instrument panel cluster to illuminate the security indicator when the vehicle is in Service Mode to indicate a fault has occurred within the immobilizer system and when the engine starting is disabled.

Remote Vehicle Speed Limiting Description and Operation

Certain vehicles equipped with OnStar® now have an additional feature that allows for remote limiting of the vehicle's speed. This OnStar® feature is called Stolen Vehicle Slow-Down and is now part of the OnStar® Stolen Vehicle Assistance service. This feature, when used in conjunction with local law enforcement and strict guidelines at the OnStar® Call Center, will slow the vehicle by interacting with the engine control system.

When the engine control system receives a valid request from the OnStar® telematics communications interface module, it will enter into a reduced engine power/vehicle speed limiting mode, which will decelerate the vehicle. Once the request is active the engine control module begins reducing engine torque to match requested vehicle speed and a REDUCED ENGINE POWER indication is displayed. No DTCs will be set during this process.

Keyless Entry System Description and Operation – Active

The keyless entry system is a vehicle entry device. The keyless entry system is used in conjunction with the door locks to unlock the vehicle. Keyless entry will lock/unlock the vehicle doors or open the rear compartment lid when a corresponding button on the keyless entry transmitter is pressed. This is accomplished by the transmitter sending a radio frequency to the remote control door lock receiver antenna that has a direct link to the body control module (BCM). The BCM interprets the signal and activates the requested function or requests the appropriate control module to activate the function via a serial data message. A low transmitter battery or radio frequency interference from aftermarket devices, such as 2-way radios, power inverters, computers, etc., may cause a system malfunction. High radio frequency traffic areas, such as gas stations that use pay-at-the-pump radio frequency transponders,

may also cause interference that could lead to a malfunction. Keyless entry allows you to operate the following features:

- Door lock/unlock
- Remote start
- Illuminated entry lamps
- Panic alarm/vehicle locator
- Remote vehicle start

Keyless Entry System Description and Operation – Passive

Passive keyless entry allows entry to a locked vehicle without pressing any buttons on the keyless entry transmitter. You must only have the transmitter with you. The passive entry system use low frequency antennas in several different areas on the vehicle to determine the location of the transmitter. When passively opening a locked door or the rear compartment, you must have a programmed transmitter with you in your pocket, purse, or briefcase.

When an exterior door handle button is pressed or the rear compartment touch pad is pressed, the low frequency antenna sends out a challenge to the keyless entry transmitter. Because of the low frequency, communication range is limited. The antenna will emit the challenge in a one meter range. The transmitter must be within this range to receive the challenge. The transmitter receives this challenge and emits it's response as an RF message, which is received by the remote control door lock receiver. If the response is correct, the door or rear compartment will unlock and open.

As a customer convenience feature, the keyless entry system will notify the driver if the transmitter has been left in the vehicle after exiting by chirping the vehicle horn three times. This may be turned off using vehicle personalization. Also, if the transmitter is left in the vehicle after the central door lock switch has been used to lock the vehicle, the driver door will remain unlocked after exiting the vehicle. This is intended to prevent locking the transmitter in the vehicle and being unable to access it.

Keyless Entry System Description and Operation – Keyless Start

The keyless start portion of the keyless entry system allows vehicle starting, having only the transmitter as your key. The keyless start system uses low frequency antennas in three different locations on the vehicle to determine the location of the transmitter. Multiple antennas are used to ensure complete coverage of the vehicle interior and rear compartment. When using the keyless start system, a programmed transmitter must be in the vehicle's interior, such as the driver's pocket, purse, or briefcase.

When the ignition mode switch is pressed, the low frequency antennas emit a challenge to the keyless entry transmitter. The transmitter receives this challenge and emits it's response as an RF message, which is received by the remote control door lock receiver. If the response is correct, vehicle starting will be allowed. If RF communication is interrupted, a “No Remote Detected” message will be displayed on the DIC. In these cases, the extended transmitter key blade can be placed in the transmitter slot located in the upper instrument panel storage compartment, under the rubber mat. The immobilizer antenna coil is located directly beneath the transmitter slot. Placing the extended key blade in the slot will create a low powered coupling between the transmitter and immobilizer antenna, allowing communications to occur and enabling vehicle starting.

The keyless entry system has the following components:

- Vehicle key with integrated keyless entry transmitter
- Driver and front passenger door antennas (part of the door handle assembly)
- Driver and front passenger door handle switches (part of the door handle assembly)
- Rear fascia antenna
- Front instrument panel console antenna
- Center console antenna
- Rear compartment antenna
- Body control module (BCM)
- Keyless entry control module
- Immobilizer antenna coil
- Remote control door lock receiver
- Short range remote control transceiver

Keyless Entry Transmitters

The keyless entry transmitters are used to lock and unlock the vehicle door while away from the immediate are of the vehicle. Keyless entry functions may work at up to 20 m (65 ft) from the vehicle. The keyless entry transmitter is an integral part of the vehicle key.

Keypass

Keypass is a function of the vehicle owner’s cell phone. It can perform the same functions as the keyless entry transmitters. In some model year and vehicle applications it can support additional functions.

Door Antenna

The keyless entry door antennas are used to transmit low frequency communications to the keyless entry transmitters.

The keyless entry door antennas are located in the left front and right front exterior door handle bracket. The antennas are serviced as part of the door handle assembly. The antennas are controlled by the keyless entry control module. When the exterior door handle button is pressed, the respective antenna will send out a challenge to the keyless entry transmitter, which begins the passive entry communications.

Rear Fascia Antenna

The rear fascia antenna is used to transmit low frequency communication to the keyless entry transmitters for entry to rear compartment.

The rear fascia antenna is located behind the rear fascia. The antenna is controlled by the keyless entry control module. When the rear compartment touch pad is pressed, the antenna sends out a challenge to the keyless entry transmitter, which begins the passive entry communications.

Front Console Passive (Instrument Panel) Antenna

This antenna is located in the lower instrument panel near the front of the center console.

The front console antenna is used for vehicle starting functions. When the ignition mode switch is pressed, the antenna is energized or "pinged". This emits a low frequency challenge signal that is received by the keyless entry transmitter. The transmitter will then reply to this challenge with a response and, if correct, vehicle starting will occur.

Center Console Antenna

This antenna is located in the rear of the center console.

The rear console antenna is used for vehicle starting functions. When the ignition mode switch is pressed, the antenna is energized or "pinged". This emits a low frequency challenge signal that is received by the keyless entry transmitter. The transmitter will then reply to this challenge with a response and, if correct, vehicle starting will occur.

Rear Compartment Antenna

This antenna is located in the center of the rear compartment metal floor pan, near the seatback.

The rear compartment antenna is used for vehicle starting functions. When the ignition mode switch is pressed, the antenna is energized or "pinged". This emits a low frequency challenge signal that is received by the keyless entry transmitter. The transmitter will then reply to this challenge with a response and, if correct, vehicle starting will occur.

Remote Control Door Lock Receiver

The remote control door lock receiver is located on the vehicle windshield, directly in front of the inside rearview mirror.

The remote control door lock receiver is control by and directly communicates with the body control module (BCM). When the transmitter receives a low frequency challenge from an antenna, it responds with an RF message. This RF message is received by the remote control door lock receiver and communicated to the BCM. If the RF message is a valid response to the low frequency challenge, vehicle access or starting will be allowed.

Immobilizer Antenna Coil Assembly

The keyless entry immobilizer coil assembly is located in the upper instrument panel, directly beneath the upper instrument panel storage compartment. If the transmitter battery is dead, weak, or the RF signal is being interrupted, the extended transmitter key blade can be placed in the transmitter slot located in the upper instrument panel storage compartment, under the rubber mat, to create a low powered coupling between the transmitter and immobilizer antenna, allowing communications to occur and enabling vehicle starting.

The immobilizer antenna coil is controlled by the BCM. The immobilizer control module is also active when learning vehicle keys.

Keyless Entry Control Module

The keyless entry control module is a multi-function module which performs the following keyless entry system functions:

- Activating vehicle antennas for passive keyless entry functions
- Activating vehicle antennas for keyless start functions
- Backup control for the ECM accessory wakeup and the run/crank relay
- If equipped, controls the electronic steering column lock
- Receiver of the exterior door handle switch inputs and door open switch (not the door ajar switch)
- Ignition mode switch monitoring

Short Range Remote Control Transceiver

The short range remote control transceiver is an additional communication device to provide communication between the vehicle owner’s cell phone and the keyless entry control module.

OnStar® Remote Link (if equipped)

A vehicle operator may have the ability to perform some of the keyless entry functions using applications on personal devices such as but not limited to smart phones. A condition may appear as if there is a malfunction in the vehicle. If it is suspected that this may be the case contact Technical Assistance if a condition cannot be determined through normal vehicle diagnostics.

Body Control Module (BCM)

The BCM is a multi-function module that performs the following functions:

- Receive and authenticate active transmitter and keyless start signals from the remote control door lock receiver
- Determines the functionality requested by the transmitter signal
- Performs the function requested by the transmitter signal

Unlock Driver Door Only – Active

Momentarily press the transmitter UNLOCK button to perform the following functions:

- Unlock only the driver door
- Illuminate the interior lamps for a determined length of time or until the ignition mode switch is pressed
- Flash the exterior lights, if enabled through personalization
- Disarm the content theft deterrent system
- Deactivate the content theft deterrent system when in the alarm mode

Unlock All Doors – Second Operation – Active

Momentarily press the transmitter UNLOCK button a second time, within 5 seconds of the first press, to perform the following function:

Unlock the remaining doors and rear compartment

Unlock Driver Door Only – Passive

If enabled through personalization, approach the driver door with a valid keyless entry transmitter and press the door handle button to perform the following functions:

- Unlock and open only the driver door when door handle is operated
- Disarm the content theft deterrent system, if equipped
- Deactivate the content theft deterrent system when in the alarm mode

Unlock All Doors – Passive

Approach any non driver door (front or rear) or, if enabled through personalization, the driver door with a valid keyless entry transmitter and press the door handle button to perform the following functions:

- Unlock all vehicle doors and rear compartment
- Disarm the content theft deterrent system, if equipped
- Deactivate the content theft deterrent system when in the alarm mode

Lock All Doors – Active

Press the transmitter LOCK button to perform the following functions:

- Lock all vehicle doors
- Immediately turn off the interior lamps
- Flash the exterior lights, if enabled through personalization
- Chirp the horn, if enabled through personalization
- Arm the content theft deterrent system

Lock All Doors – Passive

Exit the vehicle (with vehicle off) with the keyless entry transmitter to automatically perform the following functions, if equipped.

- Lock all vehicle doors and rear compartment after a delay
- Flash the exterior lights, if enabled through personalization
- Chirp horn, if enabled through personalization
- Arm the content theft deterrent system

When all doors are closed, they can also be locked from the exterior by pressing the door handle button while having a valid transmitter within range.

If more than one keyless entry transmitter is within a vehicle and the keyless entry system detects that one or more transmitters have been left in the vehicle after vehicle is locked, any transmitter left within the vehicle will be temporarily deactivated until:

- A button on the deactivated transmitter is pressed (will only activate the transmitter whose button is pressed)
- A passive unlock of vehicle occurs
- Change in power mode occurs

Rear Compartment Release – Passive

Approach the rear of the vehicle with a valid keyless entry transmitter. Press the trunk release touch pad. The trunk will open.

Vehicle Locator/Panic Alarm/Active

A single press of the panic button performs the following functions. Some functions may be dependent on personalization settings:

- Pulses the horn three times
- Flashes the exterior lamps three times

A press and hold of the panic button performs the following functions:

- Pulses the horn and flashes the parking lamps for 30 second or until the following conditions occur:
  - The panic button is pressed
  - The ignition mode switch is pressed with a valid key in the vehicle

Remote Start

The remote vehicle start function allows engine starting while not in the vehicle. It also allows the vehicle HVAC system and other vehicle systems to enable, providing a comfortable vehicle upon entry. The remote vehicle start sequence begins by pressing and releasing the lock button and then pressing and holding the remote vehicle start buttons on the keyless entry transmitter. The turn signal lamps will illuminate to indicate the vehicle has received the remote start request. Each time a remote vehicle start is performed, the vehicle doors are locked, however they may then be unlocked/locked with the transmitter at any time. Only the first and second vehicle transmitters are able to control the remote vehicle start function. Any additional remote transmitters programmed to the vehicle will perform all other remote functions. Once activated, the engine is allowed to run for 10 minutes. The remote vehicle start time may be extended by an additional 10 minutes by again pressing and releasing the lock button and then pressing and holding the remote vehicle start buttons on the transmitter. This feature is called a remote vehicle start continue and allows a maximum of 20 minutes of engine running. If the remote vehicle start continue is performed at 7 minutes into the initial 10 minute time-out, a total of 17 minutes of engine running would occur. The remote vehicle start event may be suspended at any time by pressing only the remote vehicle start button on the transmitter or by entering the vehicle and turning ON the hazard lamps.

In between ignition cycles, only two remote start events may occur or be attempted. Once two events or attempts have been made, future remote start events will be suspended until the vehicle is operated using the ignition mode switch.

Enable/Disable Remote Start

Using the driver information center, remote start may be enabled or disabled as a part of vehicle personalization. Refer to the vehicle owners manual for more information.

Remote Start System Disabled

If any of the conditions listed below occur, a remote start event may be aborted or canceled:

- Vehicle is in valet mode
- Vehicle doors are ajar
- Rear compartment lid is ajar
- The hood is open
- The doors are not locked
- The hazard switch is ON
- Vehicle power mode is incorrect
- Vehicle speed is greater than 0
- Transmission is not in P
- Excessive engine coolant temperature
- Low oil pressure
- The malfunction indicator lamp (MIL) is commanded ON
- The low fuel level indicator lamp is commanded ON
- Engine crank time is greater than 30 seconds
- Excessive engine speed
- Accelerator pedal position too high
- Remote start timer equals 0
- Immobilizer system indicates a theft attempt
- Vehicle propulsion system fault conditions
- High voltage battery fault conditions

Keyless Entry Personalization

Vehicle lock/unlock functions and remote start settings may be personalized for the vehicle. For functional descriptions and programming instructions, refer to the vehicle owners manual.

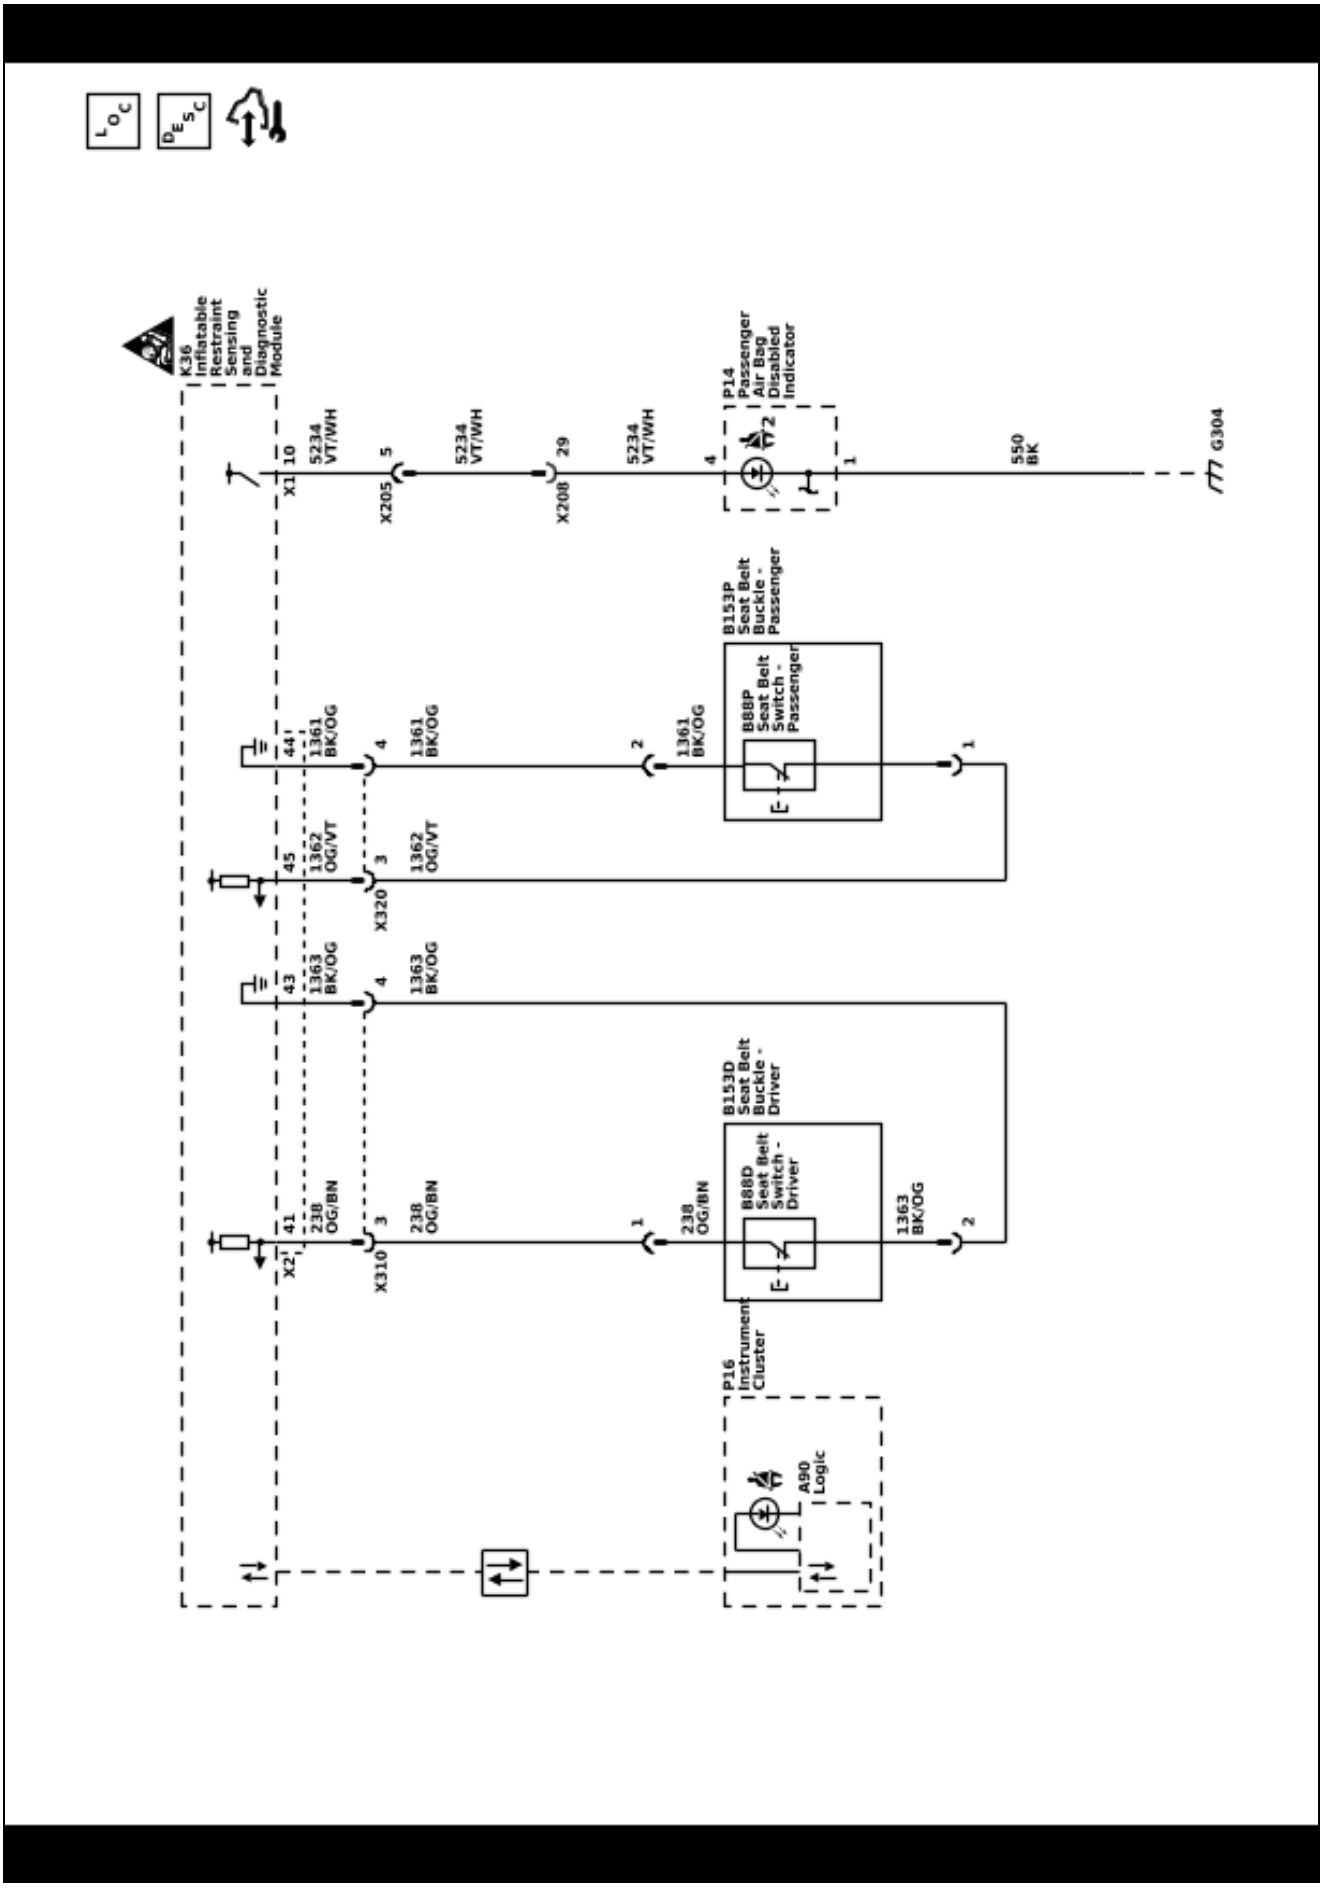
Replace Battery in Remote Key Message

A REPLACE BATTERY IN REMOTE KEY message may be seen on the driver information center when the transmitter's battery voltage has been lower than 2.16 volts for three consecutive ignition cycles.

Seat Belts

Schematic and Routing Diagrams

Seat Belt Schematics (Switches and Indicators)



Description and Operation

Seat Belt System Description and Operation

Restraint System

Note: If the vehicle has been in a collision, refer to Repairs and Inspections Required After a Collision

The vehicle has front and rear seat belts that are the primary means of occupant restraint. Seat belts help to keep the occupants inside the passenger compartment and to gradually reduce the impact forces during the following events:

- Frontal impact type crashes
- Rear impact type crashes
- Side impact type crashes
- Roll-over type crashes

All seat belt retractors have emergency locks. The retractors remain unlocked during normal operation and under normal driving conditions. The retractors remain unlocked during normal conditions in order to allow free movement of the upper body of each occupant.
A pendulum locks the seat belt webbing into position. The pendulum causes a locking bar to engage a cog on the spool of the retractor mechanism when the following conditions occur:

- A rapid extraction of the seat belt webbing from the retractor
- An abrupt change in vehicle speed
- An abrupt change in vehicle direction
- Operation of the vehicle on a steep upgrade
- Operation of the vehicle on a downgrade

The seat belts have an automatic locking (cinch) feature. The cinch feature is activated when the seat belt webbing is completely extended from the retractor. The cinch feature prevents the webbing from extending beyond the position from which it is allowed to retract. Use of the cinch feature is recommended for securing a child seat. The cinch feature may be cancelled by allowing the webbing to wind back completely into the retractor. After the cinch feature is cancelled, the webbing is unlocked. After the cinch feature is cancelled, the webbing will extend from the retractor. This vehicle is also equipped with a supplemental inflatable restraint (SIR) system. Refer to *Supplemental Inflatable Restraint System Description and Operation on page 7-24*

Front Seat Belt System

The front seat belt system includes a driver and passenger seat belt pretensioner retractor. Both front seat belt pretensioners includes a seat belt switch in the seat buckle which controls a reminder lamp and a tone alarm.

Note: The front passenger seat is equipped with a passenger presence detection sensor, which detects an occupant. If the passenger presence detection sensor detects an empty front passenger seat, then the passenger fasten safety belt indicator will be disabled.

- When the driver seat belt is buckled and the ignition switch is turned ON, the following events will occur:
  - The tone alarm will not operate.
  - The reminder lamp will not operate.
- When the driver seat belt is not buckled and the ignition switch is in the ON position, the following events will occur:
  - The tone alarm will operate for 4–8 seconds and then go OFF.
  - The fasten safety belt indicator will turn ON for 20 seconds, until the driver seat belt is buckled.

Rear Seat Belt System

The Rear Seat Belt System includes the following components:

- The rear seat belt retractor is located at the wheelhouse panel and attached to the floor panel by the rear seat shoulder belt retractor bracket.
- The rear seat belt buckles and the center seat belt buckle are attached to each seat.

Child Seat Restraint System

Warning: A child in a rear-facing child restraint can be seriously injured if the front passenger air bag inflates, because the back of a rear-facing child restraint would be very close to the inflating air bag. NEVER use a rear-facing child restraint in this vehicle. If a forward-facing child restraint is suitable for your child, ALWAYS move the front passenger seat as far back as it will go and then install the child restraint. Be sure the child restraint position does not conflict with any additional requirements provided by the manufacturer. For more information, refer to the vehicle owner's manual and the instructions that came with the child restraint.

A child in a rear-facing child restraint can be seriously injured if the right-front passengers air bag inflates. This is because the back of a rear-facing child restraint would be very close to the inflating air bag. NEVER use a rear-facing child restraint in this vehicle. If a forward-facing child restraint is suitable for your child, ALWAYS move the front passenger seat as far back as it will go and then install the child restraint. Be sure the child restraint position does not conflict with any additional requirements provided by the manufacturer. For more information, refer to the vehicle owners manual and the instruction that came with the child restraint.

The child seat may only be used in a forward facing seating location. The child seat should be installed and secured according to the manufacturer's directions.
If the child seat has a top strap, the seat will need to be anchored. Passengers should not be allowed to sit at locations where the seat belts are being used to secure the child seat.

All vehicles are equipped with a dual-mode type retractor with emergency and automatic locking features. The automatic locking feature is for restraint of a child seat. The child seat can be secured by pulling the seat belt all the way out to lock it. Then tighten the seat belt around the child seat.

If a child seat is to be used in the second seat position, a special dealer-installed anchor must be used in order to anchor the child seat top strap. This only applies to the seats designed with the top strap provision and for the vehicles sold in Canada. In order to ensure the correct top strap angle, the child seat is only to be used at the seating position for which the top strap anchor is installed.

Fasten Safety Belt Indicators

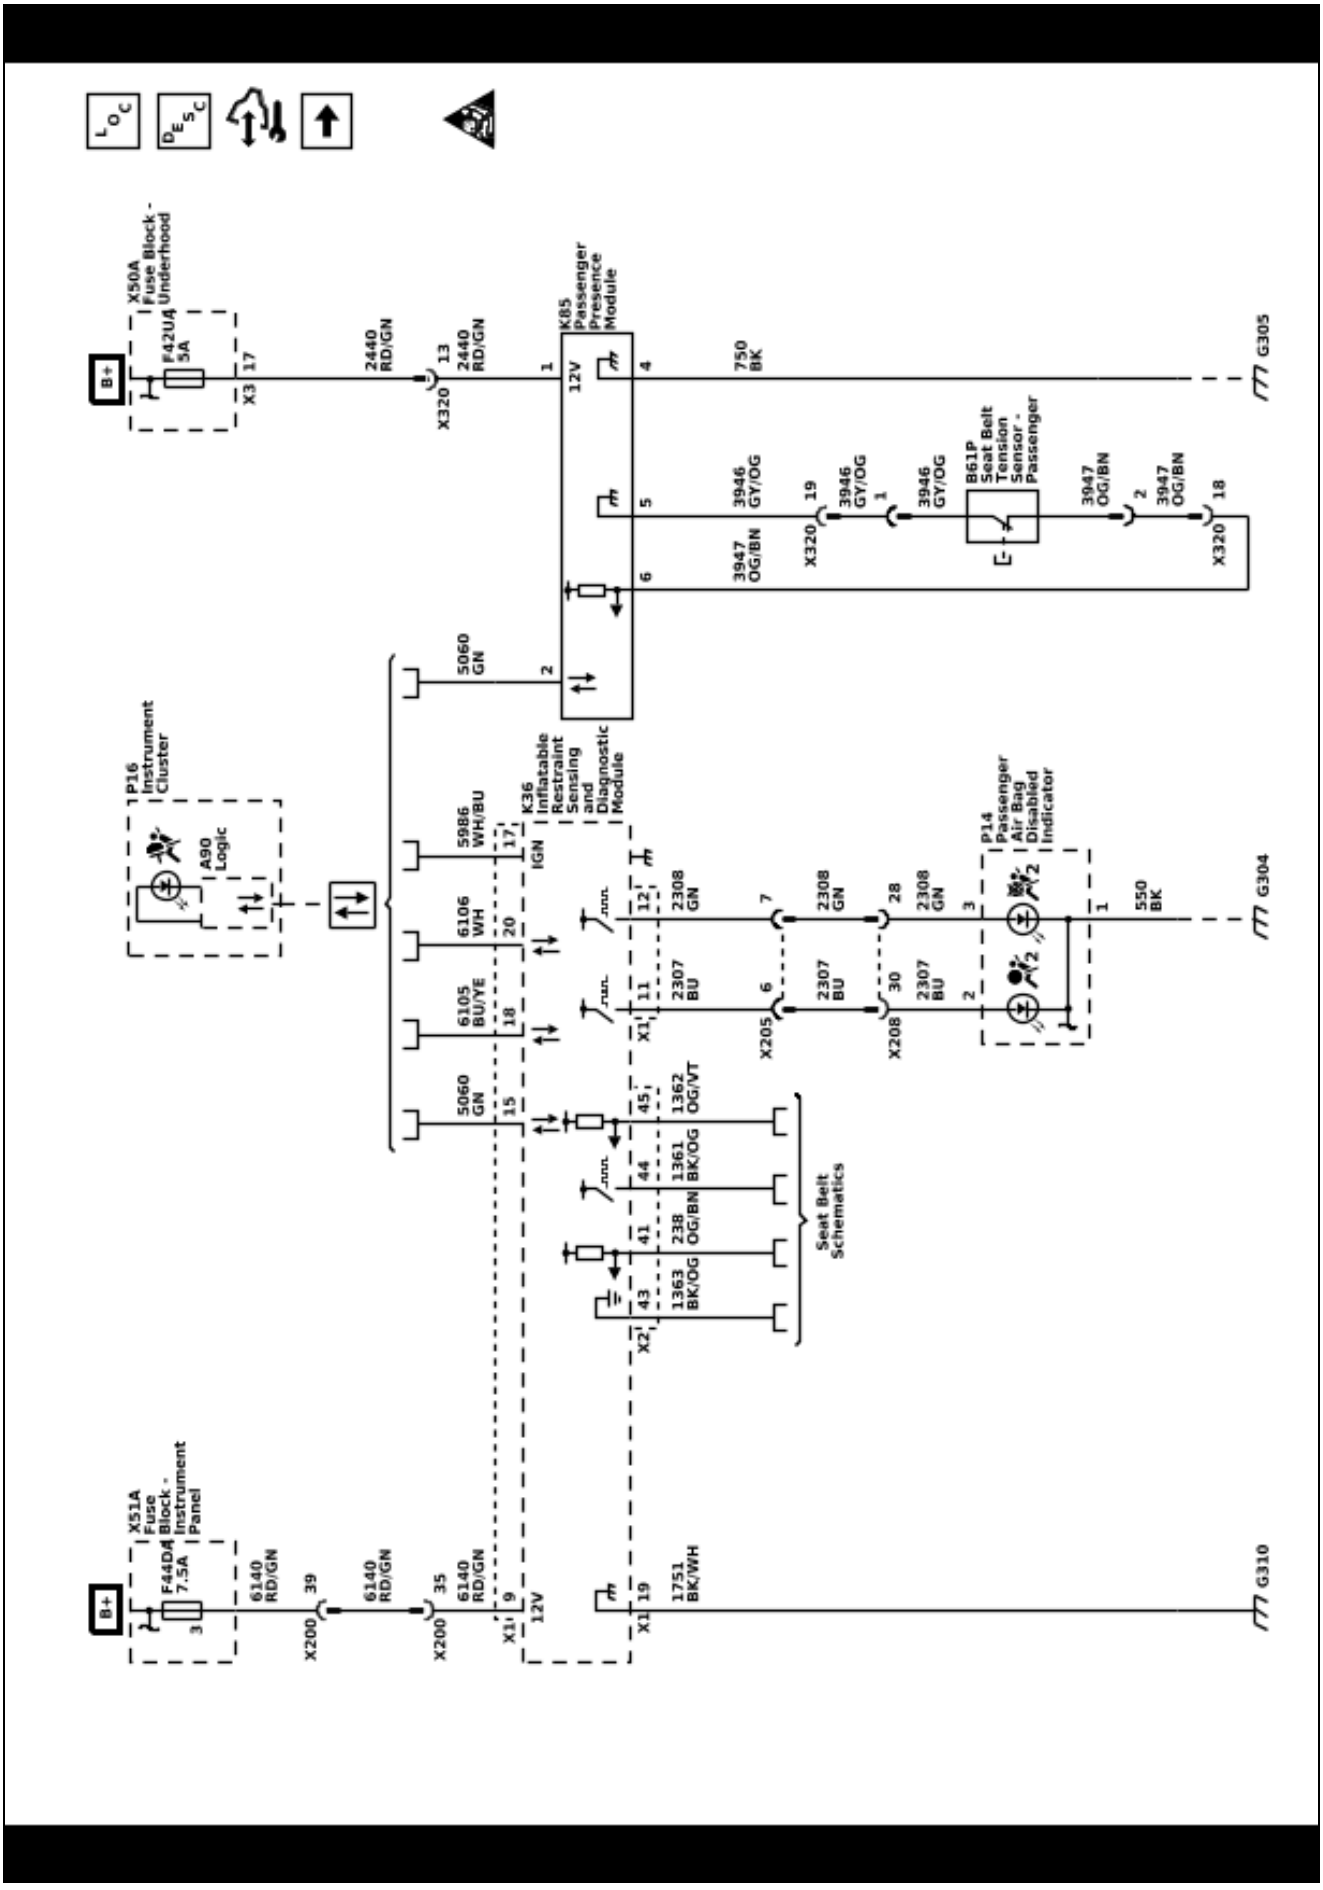
There is a fasten safety belt indicator for this vehicle. The driver fasten safety belt reminder is displayed in the instrument cluster. The fasten safety belt indicator may only be ON during RUN. The fasten safety belt indicator illuminates under the following conditions:

- During the bulb check
- The inflatable restraint sensing and diagnostic module (SDM) sends the status of the driver seat belt to the instrument cluster via serial data. If any of the seat belts are unfastened, the instrument cluster will send a message requesting a chime sound to be turned ON after a bulb check.

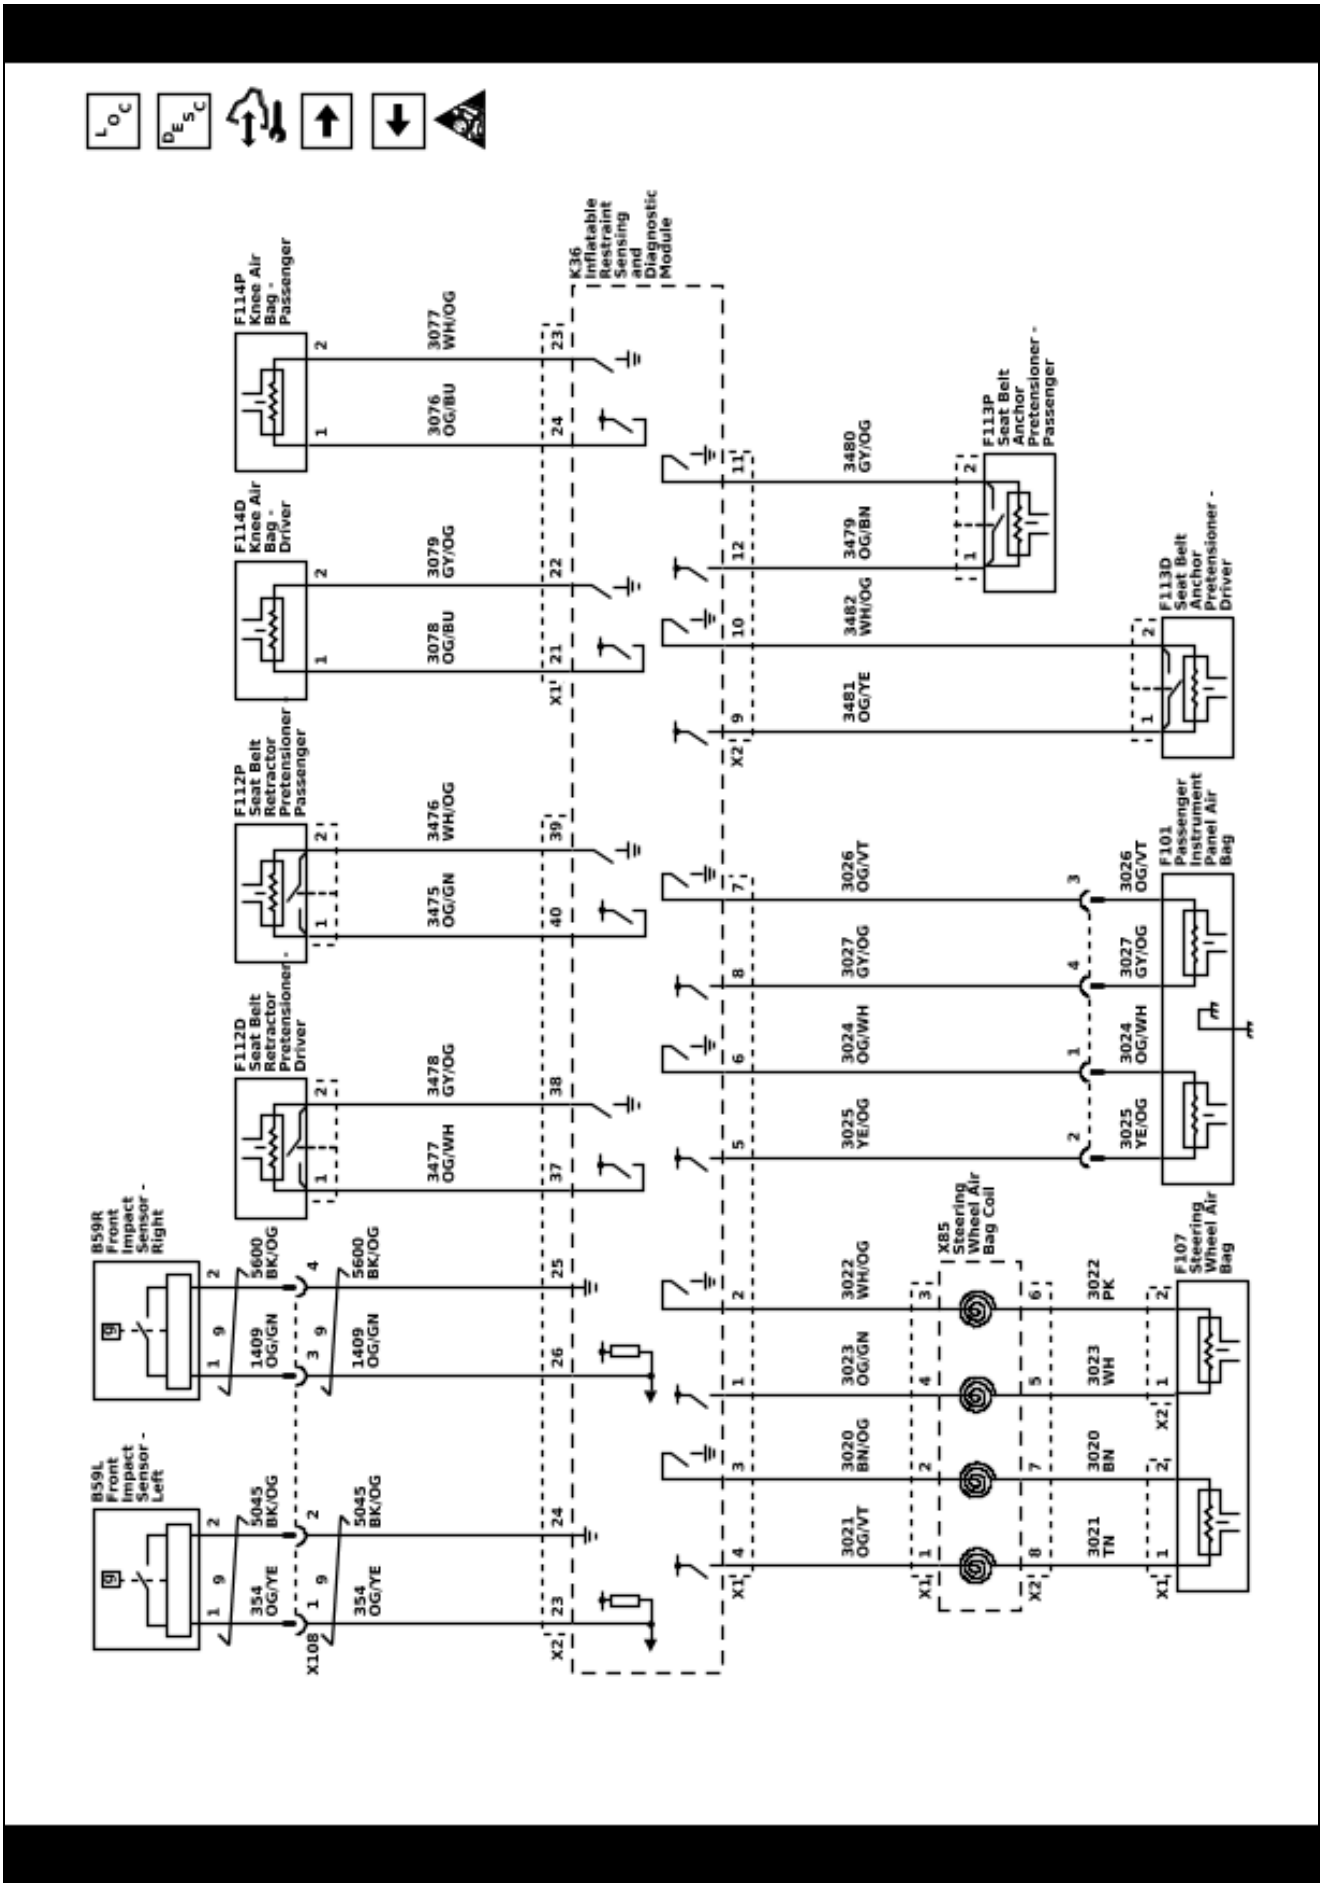
Supplemental Restraints

Schematic and Routing Diagrams

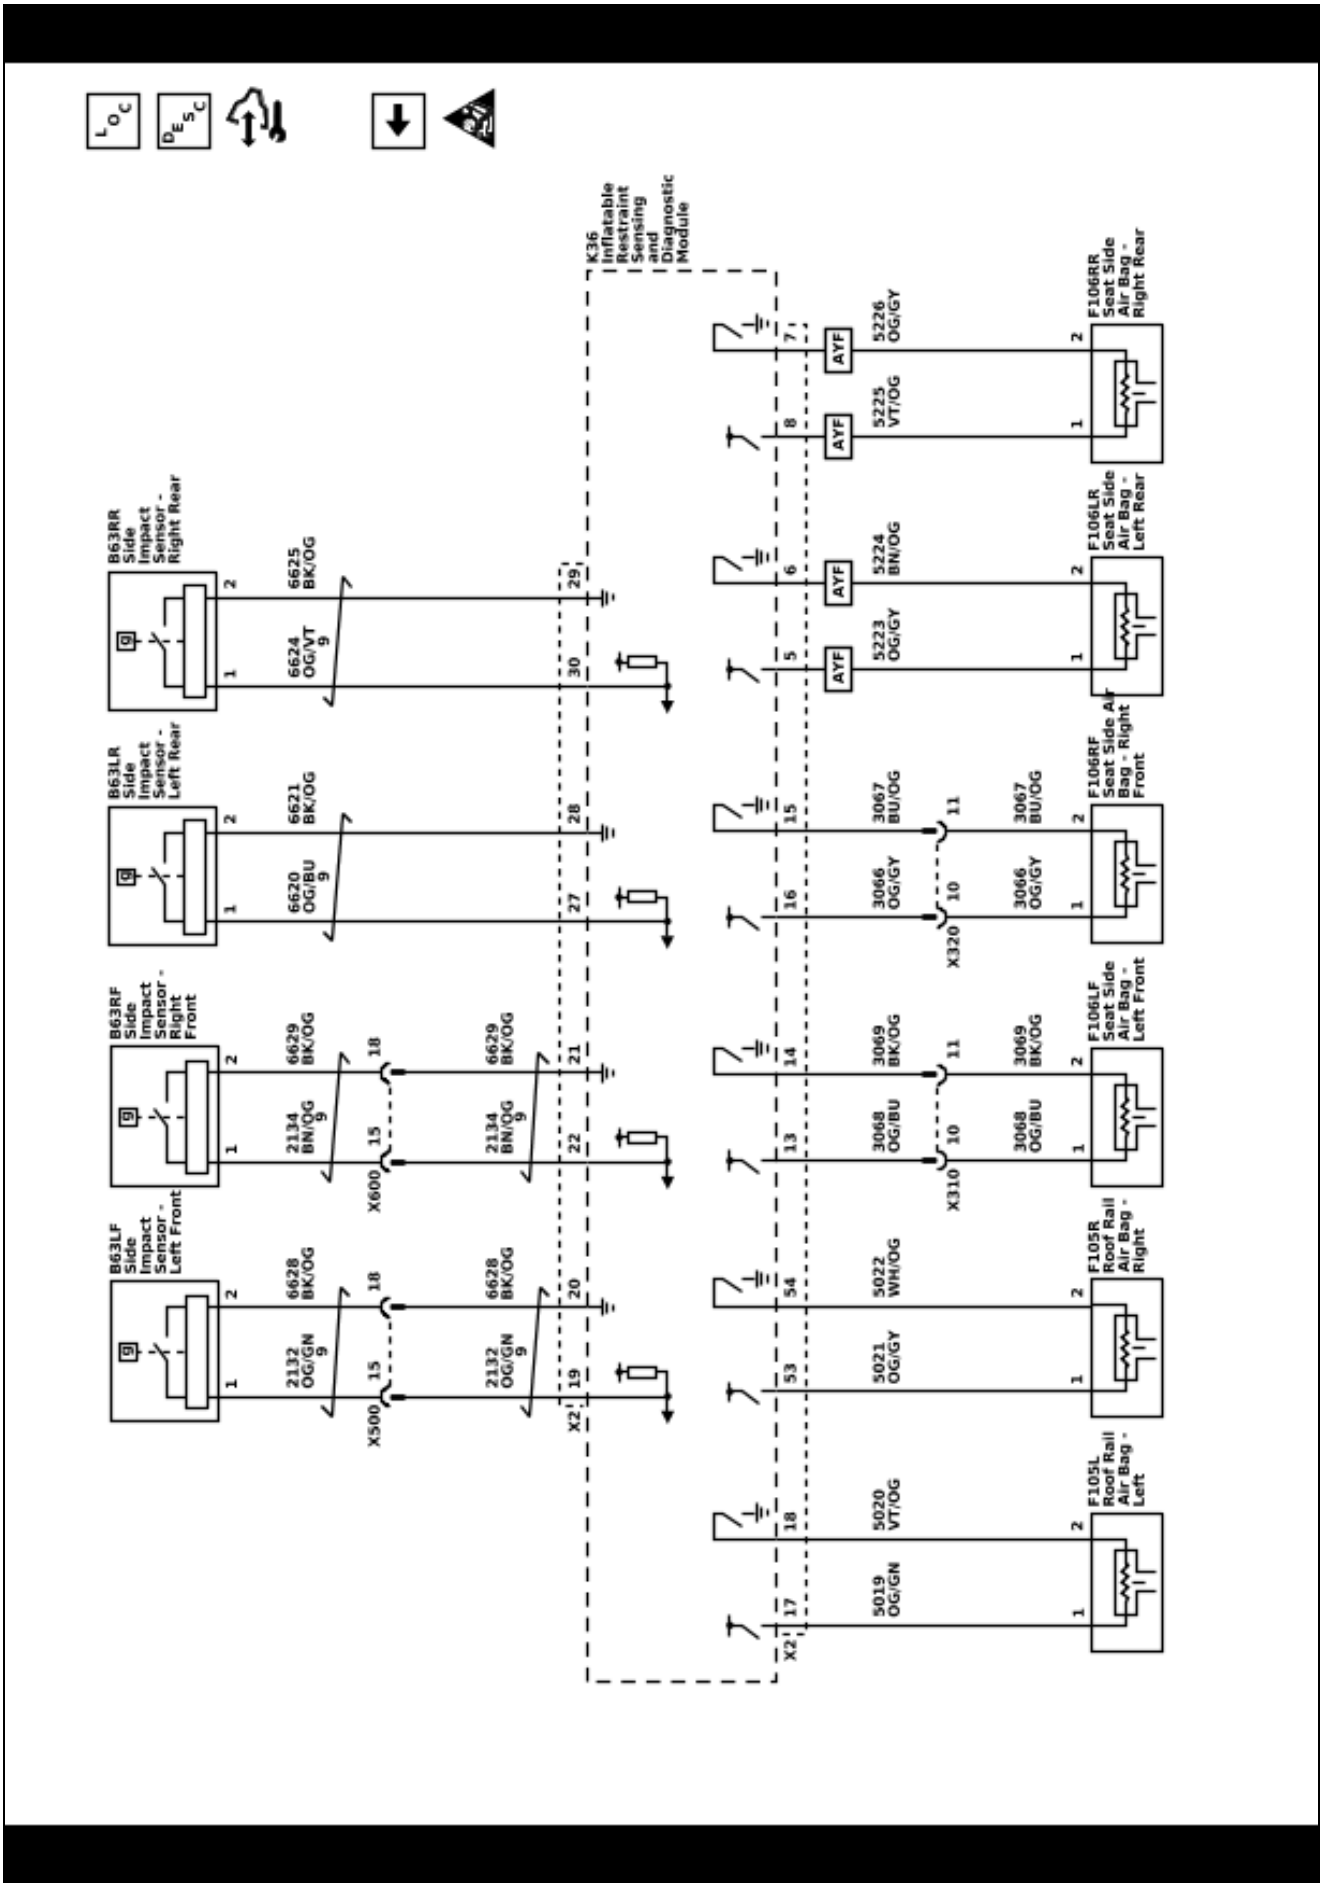
SIR Schematics (Power, Ground, Serial Data, Indicators and Passenger Presence System)



SIR Schematics (Front Impact Sensing and Deployment)



SIR Schematics (Side Impact Sensing and Deployment)



Description and Operation

Supplemental Inflatable Restraint System Description and Operation

The supplemental inflatable restraint (SIR) system, comprised of the inflatable restraint sensing and diagnostic module (SDM), impact sensors, air bags, and seat belt pretensioners, supplements the protection offered by the seat belts. The SDM determines the severity of a collision using data collected from impact sensors located at strategic points on the vehicle. When the SDM detects a collision, it processes the information provided by the sensors to provide the safest combination of air bag and pretensioner deployment. The SDM will deploy the air bags and pretensioners if it detects a collision of sufficient force. If the force of the impact is not sufficient to warrant air bag deployment, the SDM may still deploy the seat belt pretensioners. The SDM contains a sensing device that translates vehicle acceleration to an electrical signal. The SDM compares these signals to the threshold values stored in memory. If the signals exceed the stored threshold value, the SDM will determine the severity of the event and may deploy restraints. The SDM continuously monitors the deployment loops and electrical components for malfunctions. Upon detection of a circuit malfunction, the SDM will set a DTC and illuminate the SIR system air bag malfunction indicator. The steering column and knee bolsters are designed to absorb energy and compress during frontal collisions to limit leg movement and decrease the chance of injury to the driver and passenger.

The supplemental inflatable restraint system utilizes the following components:

- Inflatable Restraint Sensing and Diagnostic Module
- Air Bag Indicator
- Air Bags
- Seat Belt Pretensioners
- Impact Sensors
- Passenger Presence Sensor
- Passenger Presence System
- Passenger Presence Module
- Passenger Air Bag Indicator
- Passenger Air Bag Disable Switch
- Seat Position Sensor
- Seat Belt Tension Sensor
- Seat Belt Indicators

Inflatable Restraint Sensing and Diagnostic Module

The SDM is the control unit for the SIR system. The SDM contains internal sensors in addition to the external impact sensors. The SDM contains sensor which translate vehicle acceleration into an electrical signal, which may be used by other modules. In the event of a collision, the SDM compares the signals from the internal and external impact sensors to a threshold value stored in memory. When the generated signals exceed the stored value, the SDM will cause current to flow through the appropriate deployment loops to deploy the restraints. The SDM records the SIR system status when a deployment occurs and illuminates the air bag malfunction indicator. The SDM performs continuous diagnostic monitoring of the SIR system electrical components and circuitry when the ignition is on. If the SDM detects a malfunction, a DTC will set and the SDM will command the instrument cluster to illuminate the air bag malfunction indicator, notifying the driver that a malfunction exists. If power is lost during a collision, the SDM maintains a 23 V loop reserve for deployment of the air bags. It is important when disabling the SIR system for servicing or rescue operations to allow the 23 V loop reserve to dissipate, which could take up to 1 minute.

Air Bag Indicator

The SIR system air bag indicator, located in the instrument cluster, is used to notify the driver of SIR system malfunctions and verify that the SDM is communicating with the instrument cluster. When the ignition is turned on, the SDM is supplied with ignition voltage. The instrument cluster will momentarily turn on the SIR system air bag indicator. While the indicator is on, the SDM conducts tests on all SIR system components and circuits. If no malfunctions are detected the SDM will communicate with the instrument cluster through the serial data circuit and command the SIR system air bag malfunction indicator to turn off. The SDM provides continuous monitoring of the air bag circuits by conducting a sequence of checks. If a malfunction is detected the SDM will set a DTC and command the instrument cluster to illuminate the SIR system air bag malfunction indicator via serial data. The presence of an SIR system malfunction could result in non-deployment of the inflatable restraints or deployment in conditions that normally would not warrant deployment. The SIR system air bag malfunction indicator will remain on until the malfunction has been repaired.

Air Bags

The vehicle will contain a number of air bags, depending on vehicle available and optional equipment:

- Steering wheel
- Instrument panel
- Driver side (B-pillar)
- Passenger side (B-pillar)
- Driver side (C-pillar)
- Passenger side (C-pillar)
- Driver knee
- Passenger knee
- Left roof rail
- Right roof rail

To view the locations of the air bags refer to: *Master Electrical Component List on page 6-579*.

Air bags contain a housing, inflatable air bag, an initiating device, a canister of gas generating material and, in some cases, stored compressed gas. Each air bag has a discrete deployment loop to supply current and deploy the air bag. The current passing through the air bags ignite the material in the canister producing a rapid generation of gas and is some cases, the release of compressed gas. The gas produced from this reaction rapidly inflates the air bag. Once the air bag is

inflated, it deflates through the air bag vent holes and/or the bag fabric. A shorting bar (if equipped) is located in the connector.

The steering wheel and instrument panel air bag are a dual-stage design. a dual-stage air bag uses two stages of deployment, which varies the amount of restraint to the occupant according to the collision severity. For moderate frontal collisions, the air bag deploys at less than full deployment which consists of stage 1 of the air bag. During a more severe frontal collision, a full deployment is initiated which consists of stage 1 and stage 2 of the air bag.

Seat Belt Pretensioners

The vehicle will contain a number of seat belt pretensioners, depending on vehicle available and optional equipment:

- Driver – Seat belt anchor
- Driver – Seat belt retractor
- Passenger – Seat belt anchor
- Passenger – Seat belt retractor

To view the locations of the air bags refer to: *Master Electrical Component List on page 6-579*.

The seat belt pretensioners consist of a housing, seat belt retractor, seat belt anchor, seat belt webbing, initiator, and a canister of gas generating materials. The initiator is part of the seat belt pretensioner deployment loop. When the vehicle is involved in a collision of sufficient force, the SDM causes current to flow through the seat belt deployment loops to the initiator. Current passing through the initiator ignites the material in the canister producing a rapid generation of gas. The gas produced from this reaction deploys the seat belt pretensioners which removes the slack in the seat belts. Depending on the severity of the collision, the seat belt pretensioners may deploy without the frontal inflator modules deploying, or they will deploy immediately before the frontal inflator modules deploy. Each seat belt pretensioner connector is equipped with a shorting bar, which shorts the seat belt pretensioner circuitry to prevent unwanted deployment of the seat belt pretensioner when the connector is disconnected.

Impact Sensors

The vehicle will contain a number of impact sensors, depending on vehicle available and optional equipment:

- Front
- Front Left
- Front right
- Door
- B-pillar
- C-pillar

To view the locations of the air bags refer to: *Master Electrical Component List on page 6-579*.

The impact sensors contain a sensing device which monitors vehicle acceleration to detect collisions that are severe enough to warrant air bag deployment. The impact sensors are not part of the deployment loop, but instead provide input to the SDM.

Passenger Presence Sensor

The passenger presence system is used to monitor the type of occupant that is sitting in the front passenger seat and communicate the status to the inflatable restraint sensing and diagnostic module. The inflatable restraint sensing and diagnostic module then uses this information to determine whether to enable or suppress the deployment of the passenger instrument panel air bag. The passenger presence system consists of an electronic control module, a sensor mat in the seat, a harness, and passenger air bag ON/OFF indicators.

The passenger presence system utilizes the passenger presence sensor to determine the type of occupant sitting in the front passenger seat. In some lower featured systems, the passenger presence sensor only determines if an occupant is in the passenger seat, not the occupant type. If an occupant is not detected or the occupant type is not suitable for air bag deployment, the passenger presence sensor will send a serial data signal to the inflatable restraint sensing and diagnostic module to disable the passenger instrument panel air bag. If a suitable occupant is detected, the passenger presence sensor will send a serial data signal to the inflatable restraint sensing and diagnostic module to enable the passenger instrument panel air bag. The inflatable restraint sensing and diagnostic module will notify the customer of the enable/disable status by illuminating one of the passenger air bag ON/OFF indicator. The passenger presence system monitors itself for faults and will displays diagnostic trouble codes (DTCs) on the scan tool. When a fault is detected, the passenger presence module sends out a message to the inflatable restraint sensing and diagnostic module. The inflatable restraint sensing and diagnostic module responds by sending a command message to the instrument cluster to illuminate the supplemental inflatable restraint system air bag indicator.

Passenger Air Bag Indicator

The passenger air bag indicator identifies the status of the instrument panel air bag. If an occupant is not detected in the passenger seat or the occupant type is not suitable for air bag deployment, the inflatable restraint sensing and diagnostic module will illuminate the passenger air bag OFF indicator. If an occupant is detected in the passenger seat, the inflatable restraint sensing and diagnostic module will illuminate the passenger air bag ON indicator.

Seat Position Sensor

The seat position sensor is used to determine the proximity of the driver or front passenger to the respective front air bag. There are two states of seat position – forward and rearward. The SDM will disable the stage 2 deployment when the seat is forward and enable stage 2 deployment when the seat is rearward. The SDM monitors the seat position sensor circuit for malfunctions, and if detected, will set a DTC, illuminate the air bag malfunction indicator, and disable stage 2 deployment. There could be an improper air gap between the seat position sensor and metal bracket causing a malfunction without setting a DTC. An improper air gap will form if the sensor is not mounted

properly, the bracket the sensor is mounted on is damaged, or the metal track the sensor detects is damaged.

Seat Belt Tension Sensor

The seat belt tension sensor is mounted on the passenger seat belt retractor to measure the seat belt tension. If the shoulder portion of a passenger seat belt is fully extended, the infant car seat restraint locking feature may be engaged, disabling the passenger air bag.

Passenger Air Bag Disable Switch

The passenger air bag disable switch provides the means to manually disable the ability for the passenger instrument panel air bag to deploy. The vehicle has a passenger air bag status indicator to inform the driver when the passenger air bag is on or off based on the disable switch position.

Seat Belt Indicators

The seat belt indicators are controlled by the inflatable restraint sensing and diagnostic module. For further information on seat belt indicators refer to: *Seat Belt System Description and Operation on page 7-18*.
